## As The Editor Sees It

AS the governor of Pennsylvania has signed and made a law of the bill, which we printed in full several months past, requiring registration of architects in this state, interesting and enlightening are the remarks on this subject in the "Architect and Engineer" which asks:

"Do our registration laws protect the architect?" How often this question is asked and the answer, nine times out of ten, is in the negative. California has long had an act which is intended to protect the licensed architect, but if it does protect there is no evidence on the surface. We have a state board that meets occasionally. It has powers, but one seldom hears of them having been exercised.

The engineering societies have frequently discussed the advisability of licensing their members and probably would do so if they could see where the architects had benefited any by the act. The committee on Public Relations of the San Francisco Association, American Society of Civil Engineers, was asked to take up the matter of registration. Here is its report—terse and to the point:

"There is some advantage to the licensed engineer. But licensing in the Medical and Legal professions has not kept quacks out, so the benefit to the public is doubtful.

"There being some doubt as to a certain benefit, *laissez faire*. If licensing were in vogue, with present knowledge, our vote would also be no change."

Mr. Charles Cressey, a member of the firm of Quayle Bros. & Cressey, architects of San Diego, has some pronounced opinions on California's Registration Law and its enforcement, or rather lack of enforcement. To quote:

"Time after time we read eulogistic words from other states and abroad, urging the registration cure-all for all architectural woes, and we possessing both the cure and the woes, ask if it is the shadow or the substance of registration that has staked out its claims in California. There is no great amount of criticism heard, however, upon our Registration Act itself, which though spineless and too tolerant for most of us, does at least give legal title and a defendable right to the name architect.

"That right and the lack of action in defending it, is the cause of bitter complaint amongst architects, few of whom within my circle of acquaintance are without cases of personal loss and chagrin caused by unregistered men who care little for law and less for architecture. Accepting the California act for what it is worth, I think I am expressing a general conviction in saying that architects should and could have greater protection than has yet accrued to the profession, if the State Board exercised its power or showed even moderate aggressiveness against admitted evils.

"It is argued that the duties of the Board are purely administrative and do not include police duty or the collection of evidence. That is a cold, cold, inactive

view of an act, which is either protective, or is just a string of worthless words. If the State Board can only proceed against offenders upon formal complaint and definite evidence gathered by outsiders, that point of view is not generally known or accepted, and a service will be done by stating the fact and inviting co-operation of all interested. Too great a stress appears to be given to the letter of this act and too little attention paid to the power of personal influence and leadership.

"Members of the State Board are individually respected, each having a record and standing in business life which assures them a hearing on the subject in which they are specialists. So far there has been reluctance to assume this attitude of leadership, and few outside the profession know of their existence as a State Board of Architecture or that they have charge of an act primarily for the protection of the public.

"Most of the departments under state control are doing vital work in educational propaganda, going right to the public with practical reasoning and facts, and that public has never been in so respectful a mood as now. Everything from chicken raising to safe-first ideals, seems to be advised upon by state specialists, excepting only that art of sane and safe building on which public life is so thoroughly dependent. Prove to the public that direct cash loss, mental sluggishness and low production, follows imperfect planning as surely as it follows imperfect

feeding—prove that half-bad planning is more dangerous than half-truths in speech—prove that architecture is the primary art of planning—that decoration is a supplemental art, and that this art of planning is the work only of men specially trained beyond the arts of practical building, at the cost of time, untold perseverance and personal sacrifice—prove, too, that a state certificate can be won only by qualification, be lost by misconduct, and is an unpurchasable as the military cross for valor—and we will need to worry but little over incompetent pretenders.

"This educational work is a duty and field in which the standing and authority of the State Board of Architecture is not merely essential, but is irreplaceable. Neither the A. I. A., the local chapters, nor the most earnest words of the architectural press, can ever give the tone or reach the ears of such a public, as would the broad-minded efforts of a board acting in the public interest as distinct from the interests of architects. There is in this outline an expression of the new ideal in government—not repression, punishment, or interference with the public in class interest—but helpful, truthful leadership, giving service to the many enterprising men and women, who do or may build wrongly, from simple lack of understanding. If the State Board is to remain a purely examining body, helpless against offenders for want of a more drastic law, then architects are hopeless, indeed."

\* \* \*

**I**N these days of extreme building activity efficiency in labor and reducing building costs are imperative. With constantly increasing demand for buildings of all character and a decrease in the importation of foreign labor, in fact emigration of labor to Europe, some hard thinking must be done to evolve methods that will overcome existing handicaps. "The most important problem before the builder of today," says the *National Builder*, "is how to build in the most economical manner. This problem must be attacked not from one angle, but from several. In the first place, the builder must concern himself with the cost of erecting the work. Skilled labor is scarce and wages are high and advancing. In some communities sufficient tradesmen simply cannot be obtained, and with the tide of building activity steadily rising it will be a matter of but a few months, perhaps weeks, until our resources in men will be exhausted. What then? Shall we plug along at half speed with work constantly piling up and going to pot because we can't handle it? Not by a jug full! This country has somewhat of a reputation for doing things, and one of the principal reasons for this

reputation is due to our employment of machinery.

"If anybody thinks for a minute that the progressive builders of this country are going to lie down on the job, they had better get their roof thatched! If we can't have men we'll use machinery. We'll use the skilled men to lay out the work—make a scratch-boss of every one of them if necessary—and every possible piece of work will be done by machinery. Of course, we haven't quite reached the point where we can feed materials into one end of a machine and have it come out a house at the other, but there is a vast amount of tedious work that can be handled by machines.

"The force of men required on a job can often be cut in half by the builder who has an up-to-date plant. Wood working machinery, mortar mixers, concrete mixers, metal concrete forms, metal brackets for scaffolding, stucco machines, floor surfacers, hoisting rigs, building levels and all of the hundred and one appliances that have been developed for speeding up work and cutting costs are standing by for orders. They are ready to reinforce the units of the builders' army. The builder who doesn't employ them is going to lose a battle. He will have just as much chance competing with his more progressive fellow builders as would a raiding party attacking a "tank" with bows and arrows.

"There is yet another phase of the problem to be considered. If a building is to be put up economically it must be planned accordingly. If the rooms are larger than necessary, if the ceilings are too high, if floor space is wasted, if unnecessary frills are added, if the plan is irregular, chopped up, and full of corners and angles, the house is not going to be an economical one to build.

"Some of us have been astonished at the low cost of the houses that have lately been built by industrial plants for housing their workers. Of course, some of this economy was due to the fact that these housing developments used enormous quantities of materials which were bought in wholesale lots, but the principal saving was due to labor saving machinery on the job and to the fundamental economy of the plans for the houses. These plans were worked out by skilled men, men who had years of experience behind them. Older developments in both this country and abroad were studied, plans were revised and checked and boiled down until the completed plans represented the composite idea of scores of trained minds.

"Economy can be effected in a building development if laid out with winding streets, which follow the lines of least resistance, thus doing away with the filling and grading that is necessary where

streets are laid out in right angles on rolling ground. The curved street is also more attractive and shows up the individual houses to much better advantage than does the right-angled street subdivision.

"Every convenience to save labor and time is becoming increasingly important.

"Time and labor in moving from job to job may be saved by placing the tool box on wheels.

"A tongue on the front end permits the tool box to be attached to the rear end of a truck or wagon in the same manner as a trailer.

"This is not only a great convenience in moving from job to job and saving time, but also does away with the heavy lifting which is required when the old type of tool box is used."

### THE CHIMNEY AS A FIRE HAZARD

**I**N America the chimney is the most prolific cause of dwelling house fire losses. According to insurance records defective chimneys are responsible for more than twenty per cent. of such fires. By removing this hazard we do away with one out of five of our disastrous fires, with a resulting saving of life and possessions that cannot be measured in terms of money.

Chimneys should never be constructed of ordinary sewer tile nor with bricks laid on edge. Unlined chimney walls should be at least eight inches thick. Lined chimneys may have four-inch walls provided that not more than two flues are built in one open space and that additional flues are separated by four-inch brick withes well bonded into the chimney walls. Stone walls should be at least four inches thicker than corresponding brick ones. Cement blocks not less than four inches thick may be used if you are sure that the blocks are well made—they require conscientious workmanship. Some authorities recommend that all such blocks be reinforced with steel to prevent their cracking under temperature changes.

Chimneys should be laid up in cement mortar (one part cement to three parts sand), as it is much more durable than lime mortar, also the chimney may be carried up faster because the cement becomes strong enough to bear the weight quicker than lime mortar does. The inside of unlined chimneys should be struck smooth and not plastered. Such plastering rapidly flakes off under the action of flue gases and often tears the mortar out of the joints, thereby weakening the walls, and sometimes allowing the passage of sparks, etc. A weak draft is often due to open joints.

(Continued on Page 541.)

# Barrett Specification Roofs

## 20 Years of Service Guaranteed—

**I**N the old days buying a roof very often proved to be something of a gamble.

Maybe you got just what you specified, and maybe not.

The cost per square foot was too often taken as the only standard of value—frequently to the owner's subsequent sorrow.

*Today all this is changed.*

It was the Barrett Specification which first made it possible for building owners everywhere to obtain, through their local contractors, a *standardized roof*, worked out by roofing engineers and based on scientific principles of modern roof construction.

Today we offer to *guarantee* Barrett Specification Roofs for a period of 20 years!

This guaranty is obtainable on any roof of 50 squares or more, in any

town of 25,000 population or over, and in smaller places where our Inspection Service is available.

It is a Surety Bond, issued by the U. S. Fidelity & Guaranty Company, of Baltimore.

To obtain this Surety Bond you have only to insert in your building Specifications the following:

"The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

The guaranty costs you nothing.

We merely require that the roofing contractor be approved by us and that we be given an opportunity to inspect the construction.

We shall be glad to send you a copy of *The Barrett Specification*, with diagrams ready for insertion in your building plans.

(Continued from Page 532.)

Flue linings should be made of terra cotta or fire clay tile without lipped joints and should have walls not less than one inch thick. Ordinary sewer tile is not suitable for use as flue lining. If two flues are run in the same space, offset the joints at least four inches to prevent a fire in one flue from passing to the other. Linings should be set in cement mortar and carried up with the chimney walls and the space between the lining and the walls should be grouted with cement mortar. The entire flue area should be lined from top to bottom. An accumulation of soot at the base of the flue may cause a hot blaze. If the flue has offsets for fireplaces, etc., they will often be the hottest portion of the smoke passage and the lining should follow the slope and not stop at the end of the vertical part.

Chimneys should be free to move independently of the building. This is always possible for an interior chimney and to a limited extent for one on an outside wall. Joists, etc., should not rest on chimney walls and nails should not be driven into mortar joints. Woodwork should not be closer than two inches to the chimney. Where chimneys pass between joists, etc., the brick should be plastered on the outside with a coat of cement mortar one-half inch thick and extending at least a foot above and below the joists.

Chimneys should never rest on wood nor on unprotected metal supports; the former will shrink and cause cracks in the chimney and either material offers small resistance to fire—steel begins to lose its strength at a temperature of only 500 degrees. No supports other than fireproofed metal or masonry should be used and they should extend from the ground up—brackets are dangerous. For ordinary chimneys for two-story houses and average soil, the footing should be made of 1:2:4 concrete, 12 inches thick and 8 inches wider than the chimney all around. The footings should always be carried to the level of the adjacent house footings and below frost line in any case.—*National Builder.*

#### THE BATHROOM AND ITS EQUIPMENT.

It is safe to say, without exaggeration, that the selling value of a house is greatly enhanced by the number of its bathrooms and the character and completeness of their equipment.

The placing of such a value on this feature of house planning is simply a reflex of the general interest taken in all sanitary questions and is one of the many evolutions of modern civilization.

In crowded cities, where are congregated all manner of peoples, often under most unsanitary conditions, the question of preventing the spread of diseases is a serious one. It is obvious that the most careful safeguards should be adopted, not only to limit the area of contagion, but to remove the causes which generate sickness.

To cope with such conditions comprehensive laws have been enacted, and in all cities of importance these are rigidly enforced, with the result that all piping and all fixtures must be of an accepted standard grade and type, and the complete installation subjected to a thorough inspection before being accepted and put into use.

Perhaps more important still is the application of these laws to the remodeling of old buildings in which existing conditions are particularly dangerous.

While it is often true that the enforcement of these rules and regulations imposes hardships upon individuals, yet it works for the general good, as evidenced by the gratifying low death rates from year to year under normal conditions and by the good results obtained in localizing epidemics and preventing the spread of contagious diseases.

That baths were popular even in the days of the Roman Empire and that public bath houses were provided on an elaborate scale is amply demonstrated by such ruins as the Baths of Caracalla, but the bathroom in the home is a distinctly modern evolution, most highly perfected in America, and so varied are the ideas of what its equipment should be and so critical is the public in its requirements, that it will perhaps be of interest to dis-

Both Phones

cuss the bathroom and its equipment from a technical point of view.

The simplest bath room contains a tub and closet and should always be properly ventilated by an outside window or air shaft as required by the sanitary code. This type of room is often found in apartment houses and is commonly known as the servants' bathroom. It should not be smaller than 3 ft. 0 in. x 8 ft. 0 in. if a regular 5 ft. 0 in. tub is used and can be shorter if the length of the tub is reduced.

Where such rooms are provided the basin is placed in the bedroom, but sometimes even this is omitted and a bowl used, the water being drawn from the faucets at the tub.

The smallest dimensions for bathrooms containing tub, closet and basin are 4 ft. 6 in. x 6 ft. 6 in., which is the extreme limit, and where possible even in houses of low cost it is advisable to allow 5 ft. 0 in. x 7 ft. 0 in.

In rooms of this type the fixtures are necessarily very crowded and with the added accessories, such as towel bars, shelves, mirrors, etc., but little free space is left. However, where economy of space and limit of cost are of the first importance, they are entirely practicable.

For six, seven and eight-room houses two bathrooms are advisable and fully warrant their initial cost. The larger should be at least 5 ft. 0 in. x 8 ft. 0 in. and be for general use, while the other can vary in size according to conditions.

In larger houses the number of bathrooms and their size and equipment vary from the smallest and simplest to the most roomy and elaborate.

The most economical and in many respects satisfactory arrangement of fixtures is in a line along the wall, with window at one end of the room and door at the other. The best order in placing them is, first the closet next to the window, then the basin and lastly the tub between it and the door.

This arrangement secures good light, ventilation and floor space around the closet and basin, while it simplifies the piping reducing the cost of the rough work.

It is possible to limit the size of the room where the fixtures are so placed to 5 ft. 0 in. x 9 ft. 6 in., but an added 6-inch length is of great advantage.

Another satisfactory arrangement is by placing the fixtures against two walls with concentrated floor space rather than like a passageway as in the type above described. The dimensions of such rooms run from 4 ft. 6 in. x 6 ft. 6 in. to any desired, but a reasonable size is 5 ft. 6 in. x 7 ft. 6 in.

## What Builders Need

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

**WILLIAM M. LLOYD COMPANY**

Established 1868

29th and Ridge Avenue

PHILADELPHIA

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

Having determined the size of the room and the arrangement of fixtures, the question of interior finish comes up for consideration.

Wooden floors and base board should be avoided where possible, but if this cannot be done on account of the cost they should be of hard wood, either well painted or heavily varnished. The base should be without mouldings and be tightly fitted against the plaster wall, projecting as little as possible with beveled or rounded upper edge.

Composition finish flooring laid on an underwood floor is somewhat more costly than wood, but is much preferable to it. It is waterproof and vermin proof, can easily be washed clean and is pleasing in color, surface, finish and design. A most sanitary result is obtained by continuing it up the wall 6 inches, forming sanitary base, finishing flush with the plaster wall and joining the floor with a cove.

The most durable and desirable floors for bathrooms are either of tile or marble, the latter being the most expensive of all.

All the advantages obtained by using composition flooring as above described, apply to those covered with these materials, but to a higher degree.

It is advisable, and in some localities the laws require that closets be set on marble slabs. While this is true for all types of floors, it particularly applies when they are of wood.

Window and door trims are of wood in rooms where the floors are wood, and like the wood bases above described should be without moulding projecting slightly beyond or being flush with the plaster walls.

Wooden trim can safely be used in all bathrooms, but where the walls or wainscot are of tile or marble it is best to trim the openings with these materials.

Tile or marble wainscoting gives the greatest satisfaction. They are easily kept clean, are hard and durable, and if well laid present a smooth surface where it is hard for dust to collect. A good result is obtained by carrying the wainscot up to the height of the window sills letting the cap tile run all around, forming the sill.

Where the cost of tile or marble is prohibitive and a better surface than plaster is wanted for the walls, Keene's cement painted and marked off like tile gives excellent results at a moderate additional cost.

By painting the plaster walls and ceilings with a good enamel paint, a hard sanitary finish is secured than can easily be washed clean, and if flat enamel is

applied to the walls and a gloss finish given the ceilings and woodwork the effect is most pleasing.

The equipment of a bathroom for a house of moderate cost should consist of bath tub, closet, medicine closet, shelf, towel bars, paper holder and soap dish.

There is such a variety of design for all of these that it is difficult to make other than general suggestions that will be of real value, but it is always safe to keep to the simplest forms, best materials and good workmanship.

Low down tanks have many advantages and if of wood should be enamel finish as should the closet seats. Glass or porcelain bars and shelves are most sanitary but more costly than if made of wood.

Shower attachments, shampoo fixtures and electric outlet for heating curling irons are accessories that can be included if the cost is not to be considered.

All hardware should be of nickel.

A simple method of electric lighting is by a ceiling light controlled by a switch and such wall brackets as may be desired for special purposes such as shaving and hair-dressing.

The equipment of a bathroom can be carried to an elaborate degree, but if the sanitary recommendations here given are followed the result will be satisfactory, adding to the daily comfort of the home life and giving to the house a good marketable value.—*American Property Owner and Realty.*

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

## As The Editor Sees It

GENERAL business conditions are not materially different from what they were a month ago, although the feeling as to the future is decidedly more conservative, as a result of the disquieting labor conditions and particularly the attitude of the heads of railroad organizations. It is generally recognized that the wage advances which are being demanded and granted on all sides are not accomplishing any permanent settlement, but probably making future conditions more difficult.

Payments through the banks in mid-summer have been running much above the record for any season of a previous year. This is due in part to the highest prices on record, but it also signifies great activity in production and trade. The steel industry is up close to its capacity in many lines, although railway buying is light. Export selling has been on a good scale, although it would be much larger if the credit problem was solved. In practically all textile lines the demand exceeds production, and in woolen goods the manufacturers are naming their prices and allotting their product to their regular customers, who gratefully take what is assigned to them or beg for more. Resales are above manufacturers' prices.

The labor supply has reached a state of decided scarcity for women as well as men. The agricultural and fruit-growing districts, canning factories and all rural employments are bidding higher than ever before. The steamers for

Europe continue to be crowded in their steerage accommodations.

The retail trade is on an enormous scale in every part of the country. Merchants are bothered to get the goods required to meet the demand on them, and all accounts agree that the demand is for goods of high quality. The trade situation controverts the claims that high prices are depriving any considerable portion of our people of the comforts of life. The situation seems to be that the buying power of the people has outrun the rate of production. They need to speed up the latter or save more capital for investment in productive equipment.

The crop situation is rather better than a month ago, as the corn crop, which was then in a critical state, was saved by timely rains and promises a better yield than was counted on at any time earlier in the season, possibly 2,900,000,000 bushels. The hay and forage crops are excellent, so that the situation as to meat supply and dairy products is improved.

Following the signing of the armistice came several months of uncertainty about prices. The Government dropped out of the market as a buyer, it was known to have large stocks of supplies which it would have to dispose of, the millions of men in the army were to be returned to industry, and the war industries were to be demobilized; the general conclusion was that a fall of prices must follow. A rush was made to cancel orders, further buying was suspended, pro-

duction was curtailed and a serious period of unemployment was threatened.

The situation, however, was stronger than appeared. Stocks were light, and as retail continued heavy, merchants had to buy quite freely in the spring. The European demand for foodstuffs raised prices for these commodities, and this made any general reduction of wages and of industrial costs in the near future improbable. As the situation became more settled, conditions revived, goods proved to be scarce and prices tended upward. Such a movement is cumulative, and by the first of June, stimulated further by good crop prospects, the country was in mood to buy everything from good clothes to automobiles, and all fears of a period of unemployment had vanished.

In the latter part of June and July the crops were seriously hurt. Three hundred million bushels were marked off the wheat crop from the high estimate, the other small grains all suffered and corn was threatened with disaster. This development radically changed the situation as to the prospective food supply. Instead of having a surplus which would fill up the empty bins both here and in Europe, and bear the price as a known surplus always does, it was to be for another year a close matching of supply against demand. Of course, prices responded. In time of threatened scarcity everybody wants to make a little more certain provision than when there is an assured surplus. Consumers do it and dealers do it, just as they all abstain

from buying when there is a prospect that prices will go lower.

The June exports of the United States were on an enormous scale and this foreign buying had an influence on the markets, notably upon foodstuffs, leather and textiles. There was something like a scramble on the part of merchants to place orders for fall goods, and considerable extravagant talk about the prices which clothing and shoes would command next year.

Early in August came the demands of the railroad orders, couched in threatening language and suggesting the possibility of a strike which would shut down the transportation facilities of the country. Following in its wake was an epidemic of strikes, based upon the cost of living argument, the whole proceeding tending to promote excitement and ill-considered action.

It was probably desirable, in view of the fact that food must remain high for another year, that official action should be taken to supervise the situation, and thus give assurance that they will not be higher than the conditions make necessary. So far, however, the actual results of official activity are not important, and there is danger that the interference of a host of uninformed prosecutors may seriously disarrange the proper provision for next winter's supplies.

The labor situation is disquieting because the unrest which is prevalent tends to lower production, when the only possible remedy for the conditions complained of is in larger production. It is a trying time, a time which tests the sanity and patriotism of would-be leaders and groups. Every one who has any understanding of economic law and of social progress must be anxious that sober counsels shall prevail, and that the entire machinery of production shall be worked without interruption and with the highest possible efficiency to relieve the existing scarcity. This is no time for turmoil and strife, for class struggles or inflammatory speech. The men who have the qualities for wise leadership know that most of the troubles of society are due to the failure of people to understand one another, and they seek in times like this to quiet excitement and bring men together, rather than to intensify feeling and aggravate the disorder.

What is wanted now above everything else is work, steady, earnest work to repair the wastes of war and make good the shortage of necessities and comforts which has resulted from the four years' interruption of industry. There is no other way to make it good. Nothing could be more certain than that such a shortage would exist at the end of the war, and no one could rightfully expect

to escape all cost and inconvenience to himself. It is a time for the exercise of patience and reason. Conditions are undoubtedly trying for many people, but there is every reason to believe that they are temporary and will gradually right themselves as production is resumed. Indeed, all precedents go to show that in the long run the wage-earning class will come out with permanent benefits. Their wages have had a large advance, and when general prices fall they will be in a better position than ever before.

Modern society is necessarily co-operative. The population of this country cannot make a living as a primitive people, by hunting and fishing. They must supply their wants by means of organized industry, exchanging goods and services with each other. That kind of peaceful, progressive society is only possible upon the basis of respect and consideration for each other's rights. There must be an honest desire to give and take on terms that are mutually fair. The idea that the social groups shall take advantage of any strategical position which they may hold to get the better of each other is repugnant to the whole idea of co-operation, and in the long run no such advantage will be tolerated.

The employes of transportation companies, for instance, have it in their power to paralyze all kinds of industry, but their right to use the power which is thus accidentally in their hands cannot be admitted. They have a valid claim to just treatment, but the determination does not rest with themselves. They will certainly lose out in any conflict upon that issue, because the interests of no single group can ever be held superior to the rights of the whole community. The railroad men will always have the right to resign and go into other work, as thousands of low-paid Government employes are doing, but the right to conspire to tie up the transportation system is something different.

President Wilson in his appeal for the wage truce has challenged the attention of the entire country to the fact that there must be somewhere an end to wage increases, that increased production is the source of relief from prevailing prices, and that it is folly for labor to expect to continue indefinitely on wage levels established through war necessities. President Wilson in his appeal said:—

"The demands of the shopmen, therefore, and all similar demands, are in effect this: That we make increase in wages, which are likely to be permanent, in order to meet a temporary situation which will last nobody can certainly tell how long, but in all probability only for a limited time.

"Increases in wages, moreover, certainly result in still further increasing the

costs of production, and, therefore, the costs of living, and we should only have to go through the same process again.

"Any substantial increase of wages in leading lines of industry at this time would utterly crush the general campaign which the Government is waging, with energy, vigor, and substantial hope of success, to reduce the high cost of living.

"And the increases in the cost of transportation which would necessarily result from increases in the wages of railway employes would more certainly and more immediately have that effect than any other enhanced wage costs.

"Only by keeping the cost of production on its present level, by increasing production, and by rigid economy and saving on the part of the people can we hope for large decreases in the burdensome cost of living which now weighs us down.

"The Director General of Railroads and I have felt that a peculiar responsibility rests upon us, because in determining this question we are not studying the balance sheets of corporations merely; we are in effect determining the burden of taxation which must fall upon the people of the country in general. We are acting, not for private corporations, but in the name of the Government and the public, and must assess our responsibility accordingly."

As Charles S. Caldwell, president of the Corn Exchange National Bank, says:

"Increasing wages and the adding of abnormal profits must stop soon, even though the whole world is tired and is slow about getting back to real work. Contracting for goods to be delivered far in the future at any old price the seller names seems rather foolish when the prices are so high that they are becoming top-heavy.

"Pyramiding is dangerous. This applies to capital and labor alike."

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Many a man would do a better job if he didn't know about putty.—Ex.

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residence**, St. Martin's, Philadelphia. Architects, De Armond, Ashmead and Bickley, Franklin Trust Building, Philadelphia. Owner, William C. Hess, Jr., 1817 North Twenty-fourth street, Philadelphia. Stone and rough cast, 2½ stories, 28x58 feet, wing 12x22 feet, slate roof, oak floors, tile and marble work, electric light, hot water heat. Revised plans in progress.

**Residence**, Carpenter Station, Philadelphia, \$15,000. Architect, Frederick Muhlenberg, 901 Flanders Building, Philadelphia. Owner, Clarence Wrigley, Cresheim Arms, 51 Allen's Lane, Philadelphia. Hollow tile and stucco, 2½ stories, stone foundations, slate roof, oak floors, hot water heat, electric light, tile work. Plans in progress.

**Office Building**, 1622 Cherry street, Philadelphia. Architect, Frederick Muhlenberg, 901 Flanders Building, Philadelphia. Owner, H. F. Donnelly and D. O'Connell, Land Title Building, Philadelphia. Brick and cast stone, 2 stories, 18x75 feet, composition roof, maple floors, steam heat, electric light, tile work. Architect taking bids due September 15th. Pringle Borthwick, 8018 Germantown avenue; H. H. Burrell, 206 South Quince street; William H. Eddleman & Sons, 453 Green Lane; Thomas C. Trafford, 1613 Sansom street, Philadelphia, and Duckworth, Harvey & Hartman, Camden, N. J., are figuring.

**Club House**, Pulaski avenue and Coulter street, Germantown, Philadelphia. Architects, Mellor, Meigs & Howe, 201 South Juniper street, Philadelphia. Owners, Wissahickon School Club, care of John T. Emlen, Brown Building. Details undecided. Sketches in progress.

**Ice Plant**, Mascher and Duncannon streets, Philadelphia. Architect, private plans. Owner, American Ice Co., Walter Lee, vice president, Sixth and Arch streets. Brick and concrete, details undecided. Plans in progress.

**Residence (alt. and add.)**, 4655 Locust street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Mrs. C. School, 4655 Locust street, Philadelphia. ## Plans or No Plans

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

**WILLIAM M. LLOYD COMPANY**

Established 1868

29th and Ridge Avenue

PHILADELPHIA

## New Jersey Construction News

School, Haddon Heights, N. J. Architects, Berry & Cumiskey, 1237 Real Estate Trust Building, Philadelphia. Owners, St. Rose's Roman Catholic Church, Rev. A. Quinlan, on premises. Details undecided. Sketches in progress.

## Proposals

### INVITATIONS FOR PROPOSALS.

**TREASURY DEPARTMENT**, Supervising Architect's Office, Washington, D. C., August 28, 1919. Sealed Proposals will be received at this office until 3 P. M., September 18, 1919, and then opened, for Marquise for Mailing Vestibule at the United States Post Office, New Haven, Conn., in accordance with drawing R. No. 227 and this specification, copies of which may be had at the office of the Custodian or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT**, Supervising Architect's Office, Washington, D. C., August 25, 1919. Sealed Proposals will be opened in this office at 3 P. M., October 6, 1919, for the construction of the United States Post Office at St. Johnsbury, Vt. Drawings and specifications may be obtained from the custodian of the site at St. Johnsbury, Vt., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT**, Supervising Architect's Office, Washington, D. C., August 30, 1919.—Sealed Proposals will be opened in this office at 3 P. M., October 10, 1919, for the construction of the United States Post Office at Lock Haven, Pa. Drawings and specifications may be obtained after September 13, 1919, from the Custodian of the site at Lock Haven, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**TREASURY DEPARTMENT**, Supervising Architect's Office, Washington, D. C., September 2, 1919. Sealed proposals will be opened in this office at 3 P. M., September 30, 1919, for furnishing the labor required in the construction, complete (including heating,

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

plumbing, electric conduits, and wiring), with materials that will be furnished by the Government, for senior medical officers' quarters, attendants' quarters, tuberculosis pavilion, and approaches, for the United States marine hospital at Boston, Mass. Drawings and specifications may be obtained from the custodian, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 3, 1919. Sealed proposals will be received at this office until 3 P. M., September 24, 1919, and then opened, for constructing, complete, a new boathouse for the United States Quarantine Station at Reedy Island, Del., in accordance with the specifications and drawings, copies of which may be obtained from the custodian of the station or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### THE BUILDER'S ADVERTISING

One of the most important things in a builder's business is appropriate business stationery. It tells who you are, what you are—and according to its style gives a favorable or unfavorable impression of your business standing. Therefore, a simple, clean, dignified letterhead, envelope corner card, and a business card in the same style, should be carefully selected and the style adhered to. Have it always the same. Have your bills and statements of the same style, so that the general appearance of any of these can almost be identified as yours before the lettering is read. Choose a good standard stock—white or tinted—and always use that kind. Don't allow your printer to put in ornaments or curlicues—make it straight-out, simple design and simple lettering. You can get samples from any of the big printers or paper houses. Take a little care and time, and if you are in doubt get a little advice from those who know the right thing. These paper messengers have a bigger effect on the buying public than you may have any idea of, and they have a big effect on those you buy from and on your business generally.

The builder who neglects any opportunity to make a bid for publicity is losing money. The builder who persistently keeps his name before the public is sure to be the gainer. This is an era of advertising; millions of dollars are spent yearly under the direction of experts whose fees are limited only by their ability to obtain results for their clients. The keynote of success in advertising is to keep everlastingly at it. Adopt a policy that is suitable to your line of work and then keep pounding away at it. Don't make the mistake of neglecting your ad-

vertising as soon as it begins to make money for you. Many advertisers of ten years ago whose names were household words are unknown today because they thought they were so well known that they could stop advertising.

The average builder, of course, is not concerned with national advertising, what he needs is local publicity; some method whereby he can attract the attention of people in his immediate vicinity. Probably the most effective means of doing this is by means of signboards and plenty of them. A signboard should contain the name, the business and the address—nothing more; too many words spoil its effectiveness. Have one or more signboards on every job you do, whether it is a hundred dollar remodeling job or a million dollar skyscraper. If possible have the signs illuminated at night; people are then in a more receptive mood and there is less to distract their attention. All of your heavy equipment should bear your name and material men should be furnished with signboards to be placed on all loads of material that are delivered to your jobs. Run a permanent advertisement in your local architectural and building paper, and when you have a new job notify their news departments, they will often give it notice as a news item.

In advertising it is necessary to use considerable ingenuity in order to attract the attention of the average reader. Cuts are highly desirable for this sort of work. The text which accompanies the cut should be very, very short and to the point and should refer to the subject of the cut. Twenty or thirty words are as much as the average reader of advertising will digest.

A method of reducing the cost of a large number of signs is to use a stencil. Stencils can be bought from a manufacturer or they may be home-made. For the latter use heavy manila paper, well oiled, to prevent ragged edges and sticking, or have the tinner cut one out of metal.

A neat signboard prominently displayed on equipment has considerable value from an advertising standpoint. Painting the sign on the equipment itself is not so good, as the lettering soon becomes covered with dirt and grease.

### RESPONSIBILITY OF THE ARCHITECT

The responsibility of the architect in relation to the cost of building is the most serious indictment made against him. The question of arriving at costs is extremely

**ARTESIAN WELL PUMPS**

**A. J. Nicholas & Co.**  
 Bell, Locust 5874      Bulletin Building

difficult, due to changes in the market, the varying costs in different sections in which an architect may be called upon to build, the condition of the building market as to contractors anxious to undertake the work, and last but not least, the question of the contractor's overhead profits and their estimates on labor required, these three items being subject to wide variations and not subject to any check by the architect.

The owner expects the architect to give a very close preliminary estimate on very meagre data, while it is a known fact that contractors bidding on very complete plans and specifications vary widely in the prices at which they will undertake the work, and these contractors' bids are the final word as to the value of the work.

The only solution seems to be for the architect to put this matter fairly to the public. The use of a quantity survey system should bring about far better economic conditions in the building world.

Errors in plans and specifications are certainly a financial responsibility of the architect to the owner and contractor.—*Extract from Report of Louisiana Chapter, American Institute of Architects, Post-War Committee.*

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
 Tasker Street Wharf, Delaware River, Philadelphia.

## As The Editor Sees It

MANY suggestions for the development of the port of Philadelphia have been made since the great activities of Philadelphia and its industrial vicinity have come into prominence as a result of the important part these industries contributed to winning the war. Most careful and exhaustive study has been made by the Philadelphia Chapter of the American Institute of Architects Special Committee on Housing and Transportation, of which John Irwin Bright is chairman. Mr. Bright and his associates, Messrs. M. B. Medary, Jr., John Molitor and Paul A. Davis, 3rd, have compiled in their report many notable suggestions and have made recommendations for the future development of Philadelphia, that should be given weighty consideration by all public spirited organizations and by all industrial enterprises.

This report is to be regarded as a continuance of the work undertaken by the Philadelphia Chapter of the American Institute for Architects in its investigation of the industrial development in the territory contiguous to Philadelphia. The social and economic structure of a nation cannot be separated into disassociated units for the purpose of study, but each part, be it railways or shipping or housing, must be regarded as a constituent member of an harmonious organism. The questions relating to housing and to the port of Philadelphia are only fragments of the greater question and a solution of a detail may be attempted only by rea-

lizing the interdependence of each subject in the general scheme of life.

The complete report continues:—

"On the North Atlantic Coast of the United States there are several seaports, varying from each other in their importance to commerce. Among them is Philadelphia. Philadelphia does not take the place to which we believe its strategic position on the highways of commerce entitles it, and it is the first purpose of this paper to demonstrate that by certain physical changes, presenting no insuperable engineering or financial difficulties, it may be transformed from its present humble position to one of grandeur, from an asset of local significance to a source of limitless wealth to the entire country.

"It is the second purpose to prove definitely that the conversion of Philadelphia into a great port can only be accomplished by utilizing the Hog Island site in its harbor schemes, and that there is no alternative.

"A port may be defined as a place chiefly devoted to the business of exporting and importing. It includes in its area the harbor and generally one or more cities. The principal arteries of travel, entering, subdividing and leaving the port, form the grand lines of the plan and the manner in which they are disposed determines the extent of its usefulness to national and local commerce.

"Why should one port be more prosperous than another? What are the eco-

nomic laws involved? To what extent are its physical attributes responsible for its state of being? To what extent may the physical characteristics of one port weigh against the less obvious advantages of another port? These are some of the questions which must be considered.

"The fundamental reason for a port's existence is that it is the meeting place of lines of trade. The transportation line and the port are the two terms of the equation and are necessary to each other.

"A world market once established, a host of minor influences, called into being by the fact of the existence of the port, tend to the strengthening of its position; so that the fundamental reason, the strategical location, may become relatively unimportant.

"It is even conceivable that owing to the weight of minor advantages gradually acquired through a long period of usage, a port may actually lose the superiority due to its geographical position and still retain its leadership. The hypothetical example given later shows how easily this could be brought about. It therefore follows that the prosperity of a port depends upon the sum of one or more fundamental causes and a larger number of lesser or contributory causes; and these causes are seldom of the same value in any two instances and always in a state of flux.

"The commerce which is or which may be borne on the Hudson River, the last link in the water chain from the West to

**BLUE  
PRINTS**

the sea, determines New York's primacy as an international market. In 1825, the date of the opening of the Erie Canal, the chief staple of export was the wheat grown in the country just south of the Great Lakes. The canal by reason of its low tolls obtained so much of this important business that its terminal city, New York, immediately became and has ever since remained the leading port of the nation.

"Evidently it was the route and not the harbor which determined the flow of commerce.

"All the subsequent events growing out of the commercial rivalry between the four main North Atlantic ports, Boston, New York, Philadelphia and Baltimore, furnish proof of the overwhelming advantage of geographical position. Boston and Baltimore joined forces with Philadelphia, and, using railway rates as their chief weapon, never ceased their efforts to regain some of their trade diverted to New York. Philadelphia and Baltimore had the advantage of distance and enjoyed a cheaper tariff than did her rivals, but in spite of all manipulation the grain business remained with New York. Albert Fink in his brilliant writings pointed out that the differential from the rates based on New York of 2c and 3c per hundred pounds of grain allowed by the railroads to Philadelphia and Baltimore respectively, was always added to the ocean rates. He showed that the railway rates established between the West and any Atlantic port must be regarded as only a part of the through rate from Chicago to Europe. Fluctuations in rates due to natural causes or to local rivalries were immediately equalized by the ocean charges, so that a lowering of railroad tariff in favor of any one port led automatically to an increase in ocean tariff, establishing again the equilibrium. Barring temporary exceptions, the cheapest route from Chicago to Europe was through New York, regardless of the railway tariff between Chicago and any other American port. As the shipping companies could not have been interested in any inter-city rivalry, the only possible inference is that foreign commerce could be transacted in a cheaper way through New York than through any other available port, and it was evident that something more subtle and potent than any public or secret rate was responsible for such conditions.

"A most curious situation existed about the year 1880, furnishing further proof of the all-prevailing influence of the route. For some time there was a well-grounded suspicion in the public mind that Boston was enjoying lower railway rates on export grain than was New York. Furthermore, the ocean rates between Europe and Boston were less than

between Europe and any other American port. Here was an exception to the rule of equalization, and yet the normal distribution of grain traffic between the ports was not effected. Boston had the rates, temporarily at least, but could not deliver the goods. It would be dangerous to assume, however, that a more pronounced disturbance of rates, continued for a longer period of time, and affecting a more traveled route, would not have caused a marked displacement in the center of gravity trade. The impossibility of placing an exact money value on such things as location, plan, commercial advantages or force of habit leads us to devote most of our attention to what we fatuously believe to be practical considerations. A dredge can make a harbor, but not a port. A railroad rate in itself never made either.

"The consensus of world opinion does not err in fixing upon a seaport. It knows how to distinguish between the great fundamental forces and the relatively small questions of rate making and of construction.

"As a matter of fact, the merchant engaged in foreign trade does not bother his head about these things. He has but one question to ask, viz., what is, all things considered, the most profitable seaport for his business?

"It is, therefore, clear that in order to attract to herself a great ocean-carrying trade Philadelphia must perforce cheapen her transportation facilities to a point where commerce will automatically flow in her direction. Prior to the formulation of a plan to accomplish this result, it is only common prudence to examine very closely into the reasons why other ports enjoy their varying degrees of prosperity to the end that we may base our contemplated action on the workings of economic law.

"These basic reasons seem so simple and logical that it is only with great hesitation that we venture to direct attention to them, and yet the non-recognition of their controlling force has been the frequent cause of the wastage of capital. We believe that the creation and continued existence of a port are due to the following impulses.

#### FIRST AND BY FAR THE MOST IMPORTANT CONSIDERATION.

"It must be the meeting place of natural trade routes.

"Natural trade routes are in a sense unchangeable, but in many cases are only rendered available by artificial means.

"The Suez and the Panama Canals are examples of this. Their opening made usable, on a large scale, natural trade routes which formerly had been neglected in favor of long and hazardous sea voyages. It should not be too lightly

accepted as a truth that the line in use at any given time is the only one possible.

"The actual and potential commerce using the route determines its importance. Thus, the canal from Lake Erie to the head waters of the Hudson River is a great world route, owing its value to its potential rather than to its actual usefulness.

#### SECONDARY CONSIDERATIONS.

"1. The Harbor. That the harbor should be possible of development is often all that is required. Amplitude, safety and depth of water are points in its favor, but do not control the choice.

"Examples of serviceable harbors largely artificial are London, Liverpool and all the harbors on the North European coast between Havre and Hamburg.

"Examples of harbors largely natural are New York and Boston.

"Examples of excellent harbors which are not great ports are numbered by the score and are found in every part of the world.

"2. Of two competitive ports enjoying equal facilities in the matter of natural routes and harbors, that one will prevail which exacts the lesser tolls from the commerce passing through or terminating in its boundaries.

#### FACTORS IN THE DETERMINATION OF THE AMOUNT OF THE TOLL.

"A. Transportation rates of all description based on distance and commercial competition between industries and cities. Space does not allow even the most superficial analysis of this intricate subject.

"B. The capacity of the port to transact business.

"C. The mechanical equipment of the harbor.

"D. The concentration of business and banking interests in the port area.

"E. The industrial production of the port area itself.

"F. The influence of passenger business.

"G. The conveniences and amenities of life offered to visitors.

"These minor sub-divisions are without doubt incomplete and are presented without too much assurance that they occupy their correct rank one to another, but any error of this kind must be negligible, as they are contributory and not fundamental factors.

"Indeed, mere scrutiny of the titles show that they are essentially stabilizing forces, but taken singly or together always capable of exercising an influence sufficiently powerful to overbalance a degree of advantage in a major characteristic. The position of the port once firm-

**Proposals****INVITATIONS FOR PROPOSALS.**

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 2, 1919. Sealed proposals will be opened in this office at 3 P. M., September 30, 1919, for furnishing the labor required in the construction, complete (including heating, plumbing, electric conduits, and wiring), with materials that will be furnished by the Government, for senior medical officers' quarters, attendants' quarters, tuberculosis pavilion, and approaches, for the United States marine hospital at Boston, Mass. Drawings and specifications may be obtained from the custodian, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 3, 1919. Sealed proposals will be received at this office until 3 P. M., September 24, 1919, and then opened, for constructing, complete, a new boathouse for the United States Quarantine Station at Reedy Island, Del., in accordance with the specifications and drawings, copies of which may be obtained from the custodian of the station or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**AS THE EDITOR SEES IT**

(Continued from Page 564.)

ly established in the customs of trade, commercial interest and investments having taken firm root in the economic life of the nation, there could evidently be a marked impairment in the usefulness of the main trade routes without entailing a serious result.

"It is impossible by any powers of mathematics to demonstrate whether or not such a thing as the 'concentration of business and banking interests in the port area' could be a dominant influence in the ranking of a port. The values are relative, not absolute, and can, therefore, only be approximated by inductive reasoning. The whole question of the ultimate toll is governed by the position and availability of the trade route and not by the will of man.

"Albert Fink clearly showed that rates were affected by the Erie Canal and by the railways, each in the measure of their economic powers. New York reaped a benefit from its cheaper canal rate and Philadelphia profited from its shorter rail carry and all attempts to obliterate these differences by arbitrary understandings between financial interests, or by the improvement of harbor equipment, always led to failure.

"A splendid natural harbor has all too often been accepted as the main reason

for the pre-eminence of a port; and this is all the more curious as the evidence to the contrary is there for all who choose to read. The sole requirement is the possibility, by any artificial means, to adjust the harbor to the needs of commerce. We have but to name some of the world ports to recognize that their greatness bears but little relation to the natural features of their harbors.

"Insofar as the natural trade route is made available by artificial means the element of human error is introduced and must be taken into account. A fault of judgment, the selfish interest of a corporation, the rivalry of a city,—any one of these causes might be powerful enough to nullify completely the usefulness of a route by diverting its traffic to a rival port. A moderate amount of new construction, when it affects a trade route, has sometimes wrought amazing transformations in the commercial life of a city.

"Had the topography of Eastern New York State differed but slightly from that which it now is, the Erie Canal might have sought the esea by descending the Delaware rather than the Hudson, and Philadelphia would have become the great city of the Eastern Hemisphere. It is easily conceivable that the choice between the two routes might have turned on a matter of a cut or a fill, showing how the fate of great cities may hang upon a pitifully small accident of ground,—or upon the prejudice of an engineer.

"Although the time given to the discussion of the major and minor reasons for a port has been all too short, yet it has been demonstrated that these two classes of reasons do exist and that the greater will prevail over the lesser.

**THE POSITION OF THE ROUTE AS IT  
AFFECTS THE PORT.**

"Secondary considerations being dependent on the main ones, the most expeditious way to increase the volume of commerce is to first increase the usability of the route. Fortunately, the quantity of freight passing within a few miles of Philadelphia on its way to and from tide water is large enough to monopolize the present facilities of the harbor, and our task is merely to make the line available.

"The principle of competition governed the scheme of the railway net of Philadelphia. The result has been economic waste to the public, and yet under the circumstances governing their construction the railways had no choice but to do as they did.

Building Lime—Buy pure lime, no core, no grit—Chemical Lime. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Phila. Both 'phones.

"Ripley well says that 'Economic waste in transportation is like a bargain counter. People buy for less than cost and the railways sell for more than it is worth.'

"A. M. Wellington in his great work on the economic theory of railway location says: 'It is commonly assumed that if the railway does not go to the traffic the traffic will come to the railway; but,' he adds, 'the assumption is both dangerous and fallacious.' An elaborate chart presents the fruits of his personal experiences, showing that the amount of transportation business transacted with any town decreases from its possible maximum to the vanishing point in proportion as the station is placed more and more distant from the town, and that the ratio of loss is geometric. The first unit of distance may be responsible for a loss of from 10 per cent. to 25 per cent., depending upon the character of traffic and population. The tables are offered by the author with all possible reserve, and naturally cannot be applied to a specific case without modification. But, nevertheless, the theory is sound, and in dealing with such an important question a rule which approximates correctness is better than no rule at all.

"Wellington's law, expressed in terms of our own problem, would state that *as the distance increases between the freight center and the wharf the volume of business decreases in a geometric ratio.*

"The possibility of reducing the fatal distance is alone of interest.

"The points on the North Atlantic coast where the greatest water and land highways meet are at New York and Philadelphia.

"Of the two New York is by far the more important. Its parallel water and rail lines extend to the west, the east and north, and a magnificent harbor affords an ample meeting place or forecourt, where merchandise may be exchanged and transshipped. It is quite true that the coastal water lines, especially the one to the south, would be vastly more efficient if they pursued an inside route. But in a comparatively few years that public improvement must be carried through, and for our present purpose it can be regarded as already existent.

"The commercial prosperity of the city is dependent primarily on its lines of communication, although too often secondary influences, from the mere fact of their obviousness, are assessed at an inflated value.

"Philadelphia's situation is in many ways the same as New York's. Their lines of communication differ only in the details of distance and availability, but not in their general direction nor in the

## There is a Difference

between installing a water supply system and just digging holes in the ground.

It doesn't pay to have an expensive Artesian system put in by an inexperienced well driller or graduate plumber. His lack of technical knowledge and paucity of experience usually means a water supply system that will sooner or later have to be overhauled—and probably at a higher figure than the cost of the right system would have been in the first place.

## What Builders Need

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

Walnut 4084

territory to which they extend. When the tide water canal from the Delaware River to the mouth of the Raritan River is completed, Philadelphia and New York will share the same water line to the East and the West, an extra distance of 90 miles being chargeable to Philadelphia. However, that handicap will be compensated for to some extent by reason of the fact that the opening of water line to New York will inevitably stimulate inland water-borne commerce to the South, and Philadelphia will then enjoy the same advantage of nearer distance to the Southern markets as New York now does in respect to the Western and Eastern market.

"In its rail lines, however, Philadel-

phia should be better served than New York, but the advantage of position is not utilized. Railroad freight enters Philadelphia through the back door in an unobtrusive, almost apologetic way, while in New York a front door of maximum convenience and amplitude is provided for all visitors. The commerce is ready made at our hands. A very large proportion of export and import trade handled in New York passes through the Philadelphia district. While it is quite true that a very considerable business with foreign countries now being transacted in New York would seek Philadelphia if the port increased its secondary advantages, yet the one thing to be done, the only thing in fact which will have any real bearing on the situation, is to allow commerce which is rightfully Philadelphia's to flow through her port.

"The man who in the conduct of his business uses a machine, or a wharf, or a factory, knows that the physical arrangement of the plant, be it good or bad, will affect his annual report.

"A city or a port, in its commercial aspects, is an entity, composed of a great number of business enterprises. The part and the whole are governed by the same economic laws. How then can the city prosper when violating the laws which determine the very existence of its component parts? The port seeks to act as an individual, and as such issues its claims for consideration. It competes with other ports through the organized and united action of its citizens. How can it expect to succeed, handicapped by a hopelessly inferior plan?

"The schematic map of Philadelphia's freight railway system shows that the railways are today evading Philadelphia as the canal evades New York in the hypothetical example.

"Wellington's law, touching the very heart of the matter, is so important that it will bear restating. It says that traffic will seek the transportation agency only to a limited extent, its volume diminishing in a geometrical ratio to the obstacles of distance and inconvenience thrown in its path.

"The awkwardness and impossibility of the plan itself is the main reason why Philadelphia is not a great port. *The railways by-pass it.*

#### THE REMEDY.

"Philadelphia can only be reclaimed from its position of mediocrity by the creation of new lines of water communication and in the readjustment of the main lines of land communication.

"The port cannot hope to attain to its full growth until the Delaware and Raritan Canal and the Delaware and Ches-

peke Canal are completed. (A report published by the Intracoastal Waterway Commission furnishes maps, estimates of cost and a fund of most interesting information on the subject.)

"Having established direct communication with the Great Lakes and the South by water and by land, the next essential to the port is an adequately equipped freight yard with a harbor frontage located at the strategical point.

"This point is Hog Island. By a piece of good fortune the ideal location has been endowed through the necessities of war-time shipbuilding with a great number of huge docks, many of which, with their incidental construction, can be used in the business of shipping.

"The harbor awaits its commerce!

"The supporting freight yard, the place of exchange for land and maritime goods, will lie immediately behind the water front.

"Almost without grade, about 4000 acres in extent, it will have three gateways, one to the south, one to the east and one to the west. Freight to and from the west must use Frazer as a junction and a direct line 20 miles long from that point will lead to Hog Island. Schuylkill Valley freight will be taken from Phoenixville over existing lines to Frazer, from where it also can run to Hog Island.

"This being accomplished, water and rail freight will meet on economic ground, easily and naturally. The main frame work of the plan, without which all else is waste effort, will have been established. In its logical and inevitable development the new freight yard should have a direct connection with the water front belt line of the city proper. By means of an electrically operated tunnel under the Delaware River it should establish direct rail communication with all the vast manufacturing industries on the New Jersey side. Once this link is made, the obvious freight movement between the South and New York would be on the eastern side of the river, abandoning the circuitous and costly passage through West Philadelphia.

"In passing from words to deeds, there is a field of action reserved to the various localities and trade bodies interested. There is no substitute for public spirit. Local initiative is necessary to communal prosperity. The disposition to look continually for outside aid leads inevitably to civic dry rot.

"There is also a duty involving on the national government acting through the departments of waterways and railways.

"A port is a national enterprise, wielding an influence on the economic exist-

ence of millions of human beings living outside of the confines of the port itself. The national government has always exercised control over tidal waters; it has now, temporarily at least, taken over the railways, and it cannot escape the responsibility of its own acts.

"But in order that there may be a commencement of doing it is incumbent on our citizens, acting as individuals and as associations, to present to the competent authorities all of the ascertainable evidence.

"For it is clear that in whatever it is our duty to act, those matters also it is our duty to study."

#### THE SECRET OF GOOD BUILDING

Great works of architecture, cathedrals, palaces, town halls, cannot be good where the mass of building is bad. Architecture is only building become conscious of its beauty, and where building is not beautiful that consciousness, and so architecture, is impossible. For a building is not merely a design, it is materials; and there must be a certain general skill and aptitude in using them if the designer himself is to find expression for his design. But this skill and aptitude come with the love of building; they come where men build houses, not only for shelter or gain, but to express themselves, their own taste and enjoyment, as women try to express these things in their clothes. In fact, happiness is the secret of building, and so of architecture. Look at any fine old house in town or country, and you will find that what really pleases you in it is not its conscious art, but the thought that it is a place to be happy in, that those who built it must have been happy. And so it is with beautiful towns. What we enjoy in them is the sense of a desirable state of being, shared and expressed in common; and often there is sadness in our enjoyment because this state seems to be in the past. We ourselves, and the very inhabitants, are strangers to it; for we cannot make it now, we can only gaze at it and wonder.

It is not that we are peculiarly unhappy, but we have lost the power of expressing happiness in building, as we have lost the power of folk-song. Our artistic houses can only imitate the expressed happiness of the past by a conscious effort. Mouldings now are something added and copied, they are not done naturally and fitly; they express ambition rather than affection. And bow-windows are just bow-windows, not belvederes for happy people to look out into a pleasant street. As for streets, we never expect new ones to be pleasant; we

never dream that we might get happiness by walking along them. We preserve beautiful old villages like curios; anything modern would ruin them; and why? Because it would jar upon their past happiness. Artistic cottages among those plain old ones would look restless, self-conscious, anything but happy. We talk about art, but it is not really art that we desire and miss; it is not modern Gothic cathedrals or Palladian town halls; it is the old unconscious kind of building that has the good manners of the heart. And the cathedrals and town halls, in a city where there is not that kind of building, are but the restless swagger of bad manners. They are splendors of architecture that have not been earned by good building first, splendors amid squalor, jewels worn on rags.

We are trying now to build better houses, and they are far better than the houses of thirty years ago; but the best of them are still exceptional, self-conscious, often pharisaic in their effort not to be as other houses are, and, unlike the old houses, most of them are conceived, not from the inside outwards, but from the outside inwards. It is their features that they depend on for their effect. Any good architect will tell you that, if he designs a plain, good house like the old ones, his client, looking at the drawing, will complain that it is too plain. He expects features to show that his house is artistic, and features designed from the outside. He does not wish his house to be like a happy face securely expressive of what is within. But, as we cannot have good cathedrals and town halls unless first we have good houses, so we cannot have good houses of the larger kind until the ordinary run of cottages and small houses is good. The basis of all good building is the houses that ordinary people live in; and now it is, finally, the jerry builder who makes architecture an artificial, almost impossible, art. For the great mass of small houses now are built as commercial speculations—built to let, not to live in. The builder does not think of them as homes; they are to him no more than so many bars of soap to a grocer. How, then, can he be expected to express any kind of happiness in the building of them?

*London Times.*

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

## HUMPHREY

AUTOMATIC GAS WATER HEATER

At one-tenth cent per gallon you get hot water in unlimited quantities. Installation of our water heater means the utmost in convenience and economy to the owner.

That means the utmost in reputation and prestige for the architect or builder who installs Humphrey Heaters.

## As The Editor Sees It

**I**NCREASED production is the cry of the hour—it is, indeed, the only answer to conditions existing in this country today. At the present time there is practically no foreign competition to worry about, but such a state of affairs will not last indefinitely, and America is totally unprepared to compete with foreign prices—perhaps when it is too late Labor will recognize where it might have helped meet these conditions.

The editor of *Manufacturers' News*, says that organ, last week received a letter from a business man in Munich, Germany. The writer dwells at length upon the impoverished condition of the country, but finds consolation in the fact that the wage earners, with the exception of a small minority of Spartacans, are determined to restore the nation to prosperity by increased industry.

"Throughout industrial Germany," he writes, "there is no agitation for lessened hours of work. Mechanics, shop men and agricultural labor are determined to speed up industry. Wage problems, although urgent, are not considered paramount and have been deferred for final adjudication. Just now everybody feels that if Germany expects to come back, it must return by way of hard and sustained labor."

In contrast to this situation in Germany come reports in this country like that of the lumber industry, in which the shortage and inefficiency of labor is everywhere felt. Not only strikes in the mills and camps themselves, but unsettled

transportation facilities caused by threatened railroad strikes and other labor difficulties are potent causes of low lumber production. Labor is scarce in many sections, and, worse than this, producers say it is almost impossible to get men to turn out as much work today as they did a year or two ago. In some quarters it is a rare thing for a number of men to remain in one mill for a long period. Dissatisfaction over the merest trifle is taken as an excuse for quitting and the employer is helpless. Because of these labor difficulties and other high cost of production, some mills are not very active, and this, at a time when greater production is everywhere urged and needed, is a deplorable fact. In some southern sections the labor situation is reported as easing up, but the class of labor is practically nowhere as good as it was before the war. Men who left the lumber mills and camps for the army are not returning to their places, on demobilization, in as great numbers as was hoped for and expected.

Such conditions are not confined to any one industry, but exist among working people in every industry. Without cooperation on the part of labor the employers and manufacturers are helpless to increase production, and increased production is essential today in lowering prices and restoring business to more normal conditions.

For want of training, the output of practically 7,000,000 of the 10,000,000 workers in manufacturing in the United States is said to be equal to an average

production of less than 50 per cent. of what it can be made by proper training. In view of this and of the imperative need for greater production, it is encouraging to note that the Department of Labor is contemplating a United States Training Service that will furnish manufacturers with training courses which will show their employes how to get increased production. By the use of proper methods, it is said that the lumber production of the country can be doubled. In a sawmill there are not many jobs that require trained men, but if every one who piles or handles lumber could handle two boards at a time instead of one the work would be speeded up materially. That lumber production can be speeded up wonderfully in the hands of trained men is evidenced by the record of a mill in the Adirondacks at Tupper Lake, New York. Here expert sawmill men in their summer season alone equal the output of lumber that would be considered a full year's work for most plants. Some days ago this crew cut 2,303 spruce logs in nine hours and twenty minutes, two saws making the cut on an eight-foot band mill running 10,500 revolutions a minute. The logs were all spruce from 12 to 16 feet in length; no cut was made over 10 inches in width and all were cut to one and one-quarter-inch lumber. This is said to be a world's record and is a matter of great pride, not only to the men and the mill, but to the town as well.

At the "Our Country First" Conference held in Chicago last week, labor con-

PRINTS**

ditions and demands received the bulk of attention. An outstanding principle evoked by the speakers was that labor is organized, labor is ready to fight for its rights or for more, but that the manufacturers of this country and the farmers are not organized as they should be. It was pointed out that it is no longer good policy to point the finger of blame at labor for being effectively organized, but that it is good policy to organize to cope effectively with labor.

Mr. Charles Piez, president Link Belt Company, Chicago, formerly head of the Emergency Fleet Corporation, put the labor problem in the introduction of his speech as follows:—

"During the most prosperous period in our history, with the highest wages ever paid, with abundant opportunities for employment, with a universal public acknowledgment of labor's rights to a fuller and better life, and with an Administration and a Congress most responsive to labor's demands, we are confronted with a spirit of unrest which threatens the foundation of our social and political, as well as our industrial, structure.

"The great war brought with it such an enormous demand for labor that privileges and concessions that had been the subject of controversy for a generation were granted without hesitation simply to insure that continuity of industrial processes necessary to victory. For it was victory we were after, even though we had the sacrifice industrial efficiency—yes, the very industrial system itself to win it.

"Our problem was output regardless of cost and we got it at the sacrifice of those safeguards and restrictions which competition usually imposes on the management of business. Is it strange that with the unlimited opportunities opened up to labor by the war it should have become conscious of its political power and its economic strength? Is it strange that labor should decline to surrender any advantage gained by the war, but should press for the control of industry itself?"

Mr. Piez attacked the Plumb plan as a step of labor for this control. The "open shop," he stated, is necessary to the public interest, and pointed out that the restriction of production and the "strike" justified opposition to the labor union.

As against democratization of industry, Mr. Piez states, "I am not at all impressed with the idea that by democratizing industry, we can solve labor difficulties and maintain the health and standard of the enterprise as well. Competitive industry isn't a sociable or charitable affair, it is a conflict and leadership is required to bring success . . . Democratization which goes so far as to inject a foreign and discordant element into the management of an industry, that reduces and

splits up the authority of the executive, will either kill industry or reduce it to so moribund a condition that it will have to be kept alive at the public expense."

Mr. Piez also deprecated governmental operation and profit sharing and taking labor into partnership.

Profit sharing usually means dividing to the deserving and undeserving alike. Mr. Piez does favor a plan which contains the principle of higher wages for employees who earn them, and he stated, "And yet I am strongly convinced that a pecuniary interest by the employees in an industry is a good thing, providing that interest is paid for."

The resolutions passed as a result of this two-day "getting together" embrace the following salient points:

Government activity being reduced to the smallest scope at the earliest moment is called for. Further appropriation for maintenance of the United States Employment Bureau is opposed. Resumption of railway development is called for and re-establishment of private operation favored. Price fixing is gone on record against, specifically any which does not first give to the farmer his cost of production and a reasonable profit.

The sixth resolution asks for clarification of existing statutes (Sherman and Clayton Acts) and the acquisition of expressed right by both State and Federal laws for farmers to buy, sell, and bargain collectively concerning their own products, without fear of prosecution.

The resolution bearing on production and attendant labor regulations recognizes freedom for both employers and employees to associate separately or jointly, but demands that any employer or employee who does not wish to associate must be protected in his fundamental individual right to enter a contractual employment relation.

This section for legalization of the "open shop" is followed by:

"No voluntary combination of employers, employees or both, organized for common purpose and action in respect to the employment relation should in the public interest be permitted unless it accept legal responsibility for its actions and those of its officers and agents."

Demand is made for restraining public servants from instituting concerted action by strikes or lockouts. Repeal of the so-called Tavenner amendment is called for.

In the ninth resolution referring to our position as creditor nation, reciprocal buying of foreign goods is urged.

"Our prosperity has automatically built up against us an obstacle which has the excluding effect of a protective tariff not of our making. It tends to retard the exportation of foodstuffs and materials for reconstruction essential to the relief of European countries and discourages the

foreign trade in American goods essential to the employment of our workmen and the prosperity of our industries. This conference, therefore, urges upon our Government the need of using its resources for establishing rates of exchange and upon investors the desirability of giving fair and careful consideration to offerings of foreign investments. We urge American business men to encourage reciprocal buying of foreign goods so far as is consistent with the welfare of American trade."

The resolutions protest against un-American teaching in colleges and schools, and the clause in the League of Nations establishing an international bureau of labor is disapproved.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

## Plans or No Plans

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

Contract awarded to Industrial Eng. Co., 30 Church street, New York City.

## IDEALS OF THE PROFESSION OF ARCHITECTURE

BY HENRY K. HOLSMAN

*President Illinois Chapter, American  
Institute of Architects*

If I were to take as a text a great philosophical thought—a thought typical of our individual professional lives, typi-cal of our professional organization and typical of that age-old professionalism hitherto unorganized and unconscious of its power, but just now reaching class conscience; if I were to use a phrase most typical of the value of that great creative, cumulative service of the minds of men for their fellow man, now coming to be known as world professionalism, I would say: "The first shall be last and the last shall be first and servant of all."

My present conception of the policy of this organization lies in that text. The most important goal of our organization, of our profession, of all professions, is class consciousness. The task is one for a class, not for an individual. The Presi-dent must be conscious of his position as a servant. He may help to awaken the other individuals and guide them to an awareness of their duties, powers and re-sponsibilities; but whatever is done that is true and good, whatever is achieved that is beautiful and therefore cumulative and lasting, must be done by the mem-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

bers of the organization or of the class and not by their servants, the officers. The character of a profession depends upon the character of its individuals. The reputation of a profession depends upon its organization and the participation of all in its welfare.

The architect inherits a profession built upon the oldest instincts of man and handed down from the remotest periods of history. His profession is the one great accumulation of experiences and forces imbued with the spirit of art, and art is a development of the people, as a class, for the people as a mass, and cannot be created by an individual. No new form or color invented by an individual (if such a thing is conceivable) can be called art unless it raises to the consciousness of the beholder past pleasures of the mind or familiar instincts of the race. He who would be an artist must serve his people with an emotional understanding of them, of their past.

The profession of architecture imposes upon its members the same familiarity with the achievements of structural and social sciences. The architect must work in close co-operation and deep sympathy with other professions than his own. No individual can achieve in this profession by himself. Architecture does not depend upon the inspiration of genius but upon painstaking culture and talent and the mastery of the principles of the arts and sciences accumulated from all the ages, from men of all professional classes who have worked and thought along social, structural and aesthetic lines. Architecture is a social phenomenon, not an individual phenomenon.

That our profession is the oldest, the broadest and the last to come to consciousness is at once our opportunity and our responsibility. Being in sympathy with so many other professions, it becomes our obligation to wake up and help to prepare for that day of full professional consciousness when men of all classes, from the humblest trades unionist to the exalted statesman, will ask and receive of the treasures laid up in professionalism. Class consciousness is the chief reason for the existence of any professional organization.

The world is fast becoming aware of the great value of the professional man. He is the man who stands ready to serve other men in their health and happiness, in their organizations and enterprises, in all their conceptions and achievements. What great commercial enterprise or what mighty utilization of forces would have been achieved by the so-called masters of industry had it not been for the professional man who patiently and sys-

tematically worked it out, practically for the joy of achieving it; or what one of the great machine of finance or industry, or what government in war or peace could survive and develop, but for the continued devotion of the professional man? His services are not paid for in proportion to their value, and for some things he cannot be bought. He is born of the people; seldom, if ever, of autocracy. His equipment is inherited from society and he is the safest and most important trustee for the preservation and development of society the world will ever know.

We are now awakening to the dawn of a new era. The age of kings and princes is the past. The day of barons and aristocrats is waning, and the day of professionalism is at hand. Professionalism carries but one banner, and written on that banner is but one word—service. The law of its being is freedom restrained by culture, training and unbiased devotion to duty. The remuneration of its members is a known fee in proportion to the cost of preparation and the hazard of the undertaking, coupled with that distinctive mental exhilaration, known to no other calling—the joy of solving a problem that makes life still more worth living.

"And only the Master shall praise, and only the Master shall blame;  
And no one shall work for money, and no one will work for fame,  
But each for the joy of the working, and each in a separate star,  
Shall draw the Thing as he sees It for the God of Things as They Are!"

It is our chief duty to develop our organization, in order to develop our class consciousness. By serving with each other in close contact and fraternity we can develop an awareness of our combined strength and power. To belong is not enough—to participate must be the watchword. When we know each other as individuals, we can make ourselves known to society as a class. We may not have been first in war, but we can be first in peace. Let us stand by the professional ideal, to ourselves be true, and unite in one great body and one great purpose, to serve organized society everywhere within the field of our usefulness, with one great unselfish professional organization, the American Institute of Architects.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

People who want to buy things do not catch the seller, chloroform him and cram the orders into his pocket.

Advertising is the proper education of the public as to where the thing can be found, and therefore it is a necessity.

We are parts and particles of each other, but a little of the kindly glue of human brotherhood is needed to fasten us together. The policeman who keeps the crossing clear, and at the same time informs us as to the location of the post office and the First National Bank, no doubt is, in one sense, an economic waste. On the other hand, he is an economic necessity. He is a necessary middleman.

He relieves the congestion of traffic and granting the hypothesis that he does not misdirect us as to the location of the post office, he speeds us on our way.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO.,  
Tasker Street Wharf, Delaware River, Philadelphia.

## HUMPHREY

AUTOMATIC GAS WATER HEATER

At one-tenth cent per gallon you get hot water in unlimited quantities. Installation of our water heater means the utmost in convenience and economy to the owner.

That means the utmost in reputation and prestige for the architect or builder who installs Humphrey Heaters.

Bourse Building, Philadelphia, Pa.

Lombard 490

## PUBLIC PROTECTION

demands adequate fireproofing. We are specialists in metal lath construction and have facilities to assist in planning fireproof structures that will meet the public's demand for protection and the builder's approval for economy.

### Metal Lathing Specialty Co.

2610-24 West Huntingdon Street  
Philadelphia, Pa.

Bell Phone, Diamond 209      Keystone, Park 1478

### A Few of the Reasons

why you should install the **Peninsular Combination Range**:

A Range that burns either Gas, Coal or Wood without any changing or removing of parts—separate or both at the same time—whose oven is always ready for instant use.

A Range that takes up no more space than an ordinary kitchen range, bakes and broils perfectly under all conditions and gives a lifetime of such service.

A Range that makes the kitchen cool in Summer, warm in Winter—beautiful in design, substantial, and easy to keep clean. Secure our prices.

## As The Editor Sees It

## CO-OPERATION AND INDUSTRIAL PROGRESS

Cyrus McCormick, Jr., Works Manager, International Harvester Company, Chicago.

IT IS not the purpose of the present paper to analyze completely all of the various causes entering into the industrial unrest that has swept over the world as a result of the war. Many conferences have given their attention to this subject and have adopted findings differing not so much in essential features as in the details of the plans suggested to ameliorate existing conditions.

It has been suggested that the difficulties under which employers and employees are operating are due to the nervous tension resulting from the war; to the high cost of living; to the fear of unemployment; to insufficient wages; to desire to share in the profits of industry; to a revolt against the old order of things whatever that may have been, etc. Each critic has, however, been more or less in agreement that the war taught nations once and for all time that individual workmen must be regarded as human beings. They are, to be sure, an element in production just as is the management, but the time has gone by when human labor can be bought and sold as are machines, tools, or raw materials. This lesson has long ago been learned by the majority of American employers, among whom the more liberal have for years been taking every forward step suggested to bring about a humanizing of industry. The results of the war, however, have made radicals out of many conservatives until at the present time some of the older European nations have, in theory at least, gone ahead of the United States. The man, as opposed to the machine, has the power to think, and is endowed with a soul. He is at last seeking

recognition of this fact.

In agreement with many critics of the present industrial situation, I believe that the most significant feature in labor conditions of the day is the expressed desire of labor to share in the management of business. This desire has taken on various forms in different parts of the world. In Russia we see it as Bolshevism, which is nothing more or less than a practical application of the doctrines put forth some years ago by the I. W. W. in this country. The Bolsheviks tell us that the entire product of Labor belongs to Labor, and therefore they do not wish to have any one receive a share of industry who is not engaged in manual production. Without attempting to argue the economics of this situation, I merely call attention to it as the most radical phase of this desire. The Russian wants not only a share in the management, but the entire management. It has also been said that 65 per cent. of the strikes which have taken place in Central Europe since the war are of purely syndicalist origin. In this country we have had demand after demand catalogued generally under the term of "better conditions." In England we have seen a complete disruption of industry from which has grown up the so-called Whitley Plan and, more recently, the ever-widening clamor for nationalization of industry. The underlying significance of all these movements is the final realization that the relations of employers and employees must from now on be formed on something besides a cash basis. The workman is as interested as ever in his wages and in his hours, but he is asking for more. Sometimes the demands are not well understood

even by those putting them forward. What the workman really wants is self-expression. They are asking the right to discuss and adjust matters affecting their own interests.

Many employers in this country, sensing this situation, are admitting the right of their employees to discuss in joint conference, with Labor. This, of course, has involved matters affecting the mutual interests of Capital and Labor. This, of course, has involved a recognition of the principle of collective bargaining. Economists of the older school tell us that collective bargaining is detrimental to the best interests of the employees and that any artificial interference with wages will result in an artificial attempt to regulate prices. They claim that values are regulated by economic laws. This, of course, is true to a certain extent, but on the other hand it can be argued that collective bargaining is an aid to humanity and that it allows other economic laws to operate which might otherwise be held in abeyance. Not many years ago the doctrine of "caveat emptor" ruled every economic transaction and the business world was permeated with the ethics of David Harum. Just as that doctrine has vanished, so now is vanishing the fear of collective bargaining, and we find ourselves not only admitting the right of workmen to participate in the determination of working conditions but also discussing how this right may be most surely exercised. The method finding most favor in this country can perhaps best be classified by simply calling it Employee Representation.

Reasons for Adoption of Employee Representation.

There appear to be four main reasons why

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS, JR.**

**BLUE  
PRINTS**

employers are seriously considering the adoption of employee representation.

1. Syndicalism has made such rapid strides in eastern Europe that some men, not recognizing the fundamental solidarity of the American people are afraid that this country is about to deliver itself to Bolshevism; therefore they are seeking to head off this unrestrained development and to provide a saner method by which the legitimate desires of the workmen for self-expression may be granted without at the same time completely ruining our present industrial fabric. Men of this opinion argue that the laborer has a right to speak for himself, and wish to give him this right before he resorts to revolution to obtain by force what he may think is being withheld from him. They believe discussion in an open forum cannot but bring results and that through efficient co-operation Capital and Labor, working together, will avert any possible danger of anarchy.

2. There is a close parallel existing between the movement in favor of employee representation and the growth of democratic government. Europe in the eighteenth century considered Frederick the Great's government to be nearly ideal. Later thinkers have called his government a benevolent despotism. Frederick was an enlightened man who elaborated a theory of government whereby the monarch sincerely tried to do the best he could for his people but always with the end in view of solidifying and increasing his own personal power. He built them fine buildings, instituted systems of education, did everything in his power to keep his subjects happy, but all with the object of furthering his own ambitions. Eighteenth century Germany was materially happy but individually it was not allowed to have a voice in the direction of its own affairs.

Frederick was autocratic as any Czar and his form of government a despotism; but because he tried to do right and interpret in the fairest sort of way the desires of his people, his despotism was benevolent. Now until recent years our industrial system was also a benevolent despotism. Large employers in this country and abroad instituted welfare work; started systems of insurance and compensation; made the conditions of their working people as pleasant and safe as possible; but everything that was done was paternally imposed from the top and did not come as a result of the expressed desire of the great body of employees. This system was benevolent, to be sure, but it was nevertheless despotic to a great extent. Just as benevolent despotism in politics has given way to a great democracy wherein the governed have every right of self-expression, so in industry we are now finding the old system being set aside. Now the employee is not only given the right, but is urged to accept it, to sit on an equal basis with his employer and decide every question which affects his interests. Industry is becoming democratic.

3. It is easy to point a finger of scorn at our present civilization and condemn it as being overly materialistic. Metaphysicians from Aristotle to the present day have argued against materialism. Phrasing their thoughts in the vernacular and adapting their theories to modern times, we may say that we must find some new cause for our existence besides the worship of the almighty dollar. The joy of doing things rightly will in the end give men a more real satisfaction than the material results of their efforts. Applying metaphysics to employee representation, we may describe it as a concrete effort to introduce moral right into industry. It will be many generations before materialism van-

ishes from our daily life, but surely employee representation is a step in the right direction. Idealism, after all, is something the world would do well to analyze as a necessity of today rather than of the Hereafter.

4. Looked at superficially, employee representation is expensive. It costs a certain amount of money to pay the added salaries, to do the clerical work involved, and the like; but those employers who have had the best experience say that it is really economical and efficient. They believe it pays; they believe the added interest a man must have in his work when he knows he has a share in the control of it, will go a great way toward bringing about the final efficiency of production which must be secured if the present pace of manufacturing is to be maintained. Scientific management has just one more step to take. It must become endowed with soul in order to become more efficient; and its savings must depend not upon force or will, but upon the consent of the governed. The war has proven that democratic society, while superficially less efficient than autocracy, is in the end far stronger in the face of the most awful competition human ingenuity can devise.

#### Fundamental Principles Underlying Employee Representation.

There are certain fundamental principles underlying any plan of employee representation. These are as follows:—

1. In the first place, there must be full representation (here I quote from the plan of the International Harvester Company) "on all questions relating to working conditions, protection of health, safety, wages, hours of labor, recreation, education, and other similar matters of mutual interest to the employees and the management." When we came to draft that clause in our plan we decided to make it as broad as possible. We felt the necessity of allowing the plan to include discussion on every possible subject of mutual interest. Those who may be considering undertaking such a plan must make up their minds to go into it completely or not at all. The plan must be broad if it is to be democratic, and if it is not broadly democratic it cannot succeed. The time may come when employees will wish to share in the executive management of a business. This, however, will be a matter for generations of education and development; and at the present time no one except the syndicalists is demanding participation in the management except as it affects the interests of the men.

2. A truly democratic plan of employee representation must involve joint conference between men and management. Without entering into a discussion of who may constitute the parties to industry, I may take it for granted that they include Capital, Labor, and the Consumer. As long as these three interests remain unacquainted with each other they must be mutually suspicious. Under employee representation we cease to fear discussion. We believe that if any subject can be brought out into the open where it can be tested by the clash of men's minds and where honest opinions are exchanged in free and happy discussion, a right solution cannot be long delayed. The fundamental point is to get together; to talk things over; to debate them; to understand each other's intelligently expressed opinions—and then the solution will come by itself.

3. The third point is to have sufficient representation. The numerical unit of representation will largely be dependent upon the character of the business in question. Small factories or offices may have one represen-

tative to each 25 or 30 employees. Large factories may have one representative to every 200 or 300 men. Suffice it to say that the constituency must be small enough to give each voter some contact with his representative. On the other hand, it must not be so large that the council, committee, or legislative body is so numerous that there can be no real discussion between the representatives of the men and the management.

4. There must be an easy, secret method of election to give the men absolute freedom in choosing their representatives. The War Labor Board considered this question at great length. They at first thought it advisable to hold the elections outside the plant for fear of there being some interference on the part of the management. Subsequently, however, they reversed this practice. In no case, however, to my knowledge, where such a plan is in operation, has any employer tried to direct the voting. It has been found advantageous to all concerned to allow workmen just as much freedom in choosing their industrial representatives as they already possess in choosing their Congressmen or Aldermen. Only if the choice is absolutely free will the appointed representatives of the management be able to get in touch with the real opinion of the men.

5. The plan must provide for an easy method of appeal to the highest authority in the company. Red tape must be conspicuous by its absence. If a workman has some grievance which he cannot settle directly with his foreman he may call his representative into conference. If these three reach an agreement the matter is then settled. If not, the employee representative may take the matter straight to the superintendent of the plant. If the matter is then not settled it should go easily and quickly to the Works Council, where representatives of the management and the employees will deliberate upon its merits. If they are unable to settle the affair it should go to the president of the company. If the president cannot accept or suggest a satisfactory adjustment, there comes the question of arbitration. Perhaps here, future developments will assign the duty of arbitrator to representatives of the community, but at present such agencies do not exist. In general, if there has been a sincere endeavor on the part of all concerned to examine the question fairly and frankly, there will be small need of arbitration.

6. Any plan of employee representation will fail unless there is a real determination to avoid any discrimination (and here again I quote from the International Harvester Company plan) "on account of race, sex, political or religious affiliation, or membership in any labor or other organization." This does not mean, for example, that an employer forfeits the right to employ whomever he wishes; it does mean that once a man has been considered worthy of employment he has now entered into the bosom of the industrial family and must be considered worthy also to express his own opinions upon matters affecting himself.

7. If employee representation is to succeed it must have executive supervision, just as industrial concerns employ specialists in machining, in foundry work, in heat treating, in progressive assembly, in accounting and the like. And as they recently found it desirable to employ specialists in employment and safety work, so now they are finding it necessary to employ specialists in industrial relations. The best man in the country is not too good to act as chief of the department of industrial relations of any company incorpor-

# Barrett Specification Roofs

## Your Roof is not Finished Unless it has a Wearing Surface—

When planning to cover any flat-roofed building, remember this—

*No matter how good the roofing is, unless it has a wearing top surface, such as gravel, slag or tile, it is like a book without a cover—it isn't finished.*

That is why, when The Barrett Specification was worked out years ago, the engineers insisted not only that it should be built up of the two most serviceable roofing materials in the world—pitch and felt in alternate layers—but that it should have a top-wearing-surface of gravel, slag or tile.

It is imperative that every flat roof have such a wearing surface—

*To protect the roofing materials from the direct destructive action of rain, snow, ice and sun.*

*To form a wearing-surface to protect the roofing materials from scuffing feet and the dragging of heavy objects over the roof.*

*To make the roof highly fire resistant so as to secure the base rate of fire insurance.*

### Guaranteed for 20 Years

It is because Barrett Specification Roofs are built up thus carefully, with a foundation of Specification Felt and Pitch in five alternate layers, protected by a substantial wearing-surface of gravel,

slag or tile, that we offer to *guarantee* them for 20 years.

The guarantee is in the form of a Surety Bond, which we offer on all roofs of fifty squares or more in towns of 25,000 population or over, and in smaller places where our Inspection Service is available. Our only requirement is that the roofing contractor shall be approved by us.

### How to make sure of the Right Kind of Roof

To make certain that your roof will be built according to the best scientific roofing principles, *with 20 years of service guaranteed*, you have only to insert in your building specifications this paragraph:

"The roof shall be laid according to The Barrett Specification, dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

Copies of The Barrett Specification, with roofing diagrams, will be mailed free upon request.

(Continued from Page 596.)

ating such a plan. The man chosen may be related either to the president of the company or to the official in charge of production. The labor problem is the great question of today and tomorrow, and the specialist who gives his attention to its solution cannot be too well thought of in any industrial organization.

This paper has advisedly been given the title, "Co-operation and Industrial Progress." Co-operation means that those employers who have adopted employee representation are finding a practical application of the theory that Capital and Labor are friends, not enemies. We are finding that the objects we are after are one, and that if this common object is to be obtained our method of approach must be along the same line. Capital cannot exist without Labor, and Labor without Capital is helpless. The development of each is dependent upon the co-operation of the other. Furthermore, through employee representation, Capital and Labor are finding a very pleasant mutual understanding of each other's problems. Many advocates of employee representation speak of the great benefits to be derived when the men at large understand the problems of management. This is true, but it is also equally important for the management to become educated in the viewpoint of the men. In former years, when an employer ruled one or two hundred workmen, he knew his men individually, and they understood him. Now, on the other hand, the corporation has replaced the individual employer and the employees are numbered by thousands instead of hundreds. It is, therefore, impossible for the managers of a business to maintain personal contact with their employees. Industry has gained more efficiency through the development of large units, but the old personal contact between owner and workmen has been lost. Civilization cannot afford to do without the economy of large production, and it is looking to employee representation to bridge the present gap and to bring the men into contact with the management and the management in direct contact with the men.

Those men who object to employee representation argue that employees are more interested in high wages; that they will elect undesirable or incapable representatives; that they will break down the discipline of the shop, and that it is merely an invitation looking toward the ultimate establishing of a closed shop. In reply to those objections I believe that while it may be argued that the point of view I have followed is a matter of opinion, no one has suggested a more constructive arrangement for settling the differences between employers and employees. Secondly, our experience indicates that as often as not, the men ask for shorter hours rather than higher wages. They are interested in living happily, and they feel that employee representation is giving them a better chance of livelihood.

To others who claim that a group of American employees will not elect men capable of upholding the confidence reposed in them, I quote figures to indicate the stable characteristics of men chosen by the employees of the International Harvester Company as their representatives. The average of these representatives throughout our Company is about 37 years. Three-fourths of them are married. Their average employment with the Company

is over seven years, and a large number own their own homes or stock in the Company. They are required by the plan to be American citizens, but that has not prevented the election of a large number of good Americans born in foreign countries, some of whom have proven themselves in common council far above the average ability. I do not pretend to say that we do not have any radicals among the number, but their presence has only served to make the discussion keener and to prove to us that our plan was really democratic in basis. The men, of their own free will, have chosen responsible representatives whose opinions are valuable for what they are.

#### The Workings of the Plan.

The workings of the plan have called upon the representatives of the men and management alike, to put forward their keenest intelligence. In the beginning it was quite natural that the first demands were all for large increases in wages. The plan passed successfully a very severe test when it had to be explained to the men, through their representatives, that the financial condition of the Company and of the business were not such as to justify a flat increase of wages. Later, when the cost of living rose again, as it did last summer, the question was again brought up, and this time the management representatives accepted the point of view of the employee representatives just as sincerely and fairly as in the beginning the latter had accepted the view of the former. The International Harvester Company, since the inception of its plan of employee representation, has never held back any information from the men. Business policies have been discussed and figures shown which it was our former custom to keep secret. We share their pride in the fact that thousands of men, when given this information, have been able to judge it intelligently and act accordingly.

The Company has also been able to discover many inequalities in the wage scale which it did not dream existed. For example, it was brought to our attention that we had a number of men who were working seven days a week, twelve hours a day. When, through the Works Council, some of these men objected and asked to be relieved of such an undesirable situation, the matter was immediately cleared up. Piece-work rates have been revised and made equitable wherever it was shown that they were too high or too low in competition with other workmen engaged in

## What Builders Need

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

### WILLIAM M. LLOYD COMPANY

Established 1868

PHILADELPHIA

similar operations. Numberless small instances have been discovered where men were afraid, under the old system, to complain of situations which they knew were wrong, and now that a natural channel for legitimate complaint has been created, they have found it to their advantage, and, therefore, to ours as well, to see to it that wrong things were set right.

Shop discipline cannot be upset if the plan is operated correctly, and if management and men alike understand its sincerity and underlying principles. If an employee representative or foreman takes the attitude that it is their duty to act as a check upon each other's activities there will be friction. If the superintendent does not realize what he can gain from the co-operation of his men he can instill in his executive force a fear of industrial democracy no less keen than that with which English county officials regarded the Reform Bill of 1832. When the great majority of employers a few years ago accepted the principles of scientific employment and took away from their foremen the right to hire and discharge, the claim was made that the foreman's authority would be undermined and his discipline ruined. That did not then prove to be the case, and no more now is a foreman's authority undermined by employee representation. By discipline, I, of course, mean intelligent obedience, rather than skill in executing the goose-step.

So far as trades unionism is concerned, our friends of the American Federation of Labor have mistaken the trend of employee representation. In the very important convention held at Atlantic City in June of this year, there were adopted elaborate resolutions condemning employee representation, on the ground that elections were unfair; that democratic organization was not permitted; that the committeemen were intimidated, and that an employee in pleading his case could not have the aid of an expert walking delegate to help him marshal his facts. No one who, as I have done, has sat through meeting after meeting of a Works Council, could believe that any one of these charges is justifiable. The basic object of organized labor is to improve the condition of workmen through the principle of collective bargaining. Without doubt this was necessary in the past, and is possibly still necessary in many cases, but now with employee representation, working sincerely and successfully, organized labor should welcome it as an ally which is seeking the same fine result and achieving it with more immediate and intimate satisfaction than is possible for an organization not controlled by the men of any given factory themselves. Employee representation has not been set up in opposition to organized labor. It is not an endeavor to create company unions or to do anything to deprive the men of the results which long years of industrial history have secured for them. It is a sincere effort to bring Capital and Labor together for the benefit of each, and to develop between them a family feeling of mutual interest which cannot but be helpful to the development of industry today and tomorrow.

I do not pretend that the particular plan of employee representation under which the International Harvester Company is operating, or any other plan will in itself prove a panacea for all industrial evils. It is not the plan that counts, but the way in which it is operated. Those employers and employees who

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

are considering the introduction of such a plan must not expect too many results at once. The ground must be properly prepared in the first place by sound education of both employer and employees. The start must be sure, and while it may appear slow, it is undesirable in the extreme to hope that a new scheme will function perfectly from the beginning. Do not expect that you will immediately reap all the fruits that will ultimately be yours, but wait confidently for the momentum of mutual education to carry you along to better business. I repeat: it is not so much the plan that counts, but the way in which it is operated.

#### A Test of Employee Representation.

In the recent labor difficulties in Chicago, employee representation was forced to stand an acid test. We have eight plants in Chicago, in seven of which there are Works Councils. Due to various causes, such as strikes in large neighboring establishments and the presence of a large number of non-American groups of employees, a strike was begun in that plant where there was no Works Council. When these men, without making any demands, were out upon the street, they proceeded in a body to adjacent factories where there were Works Councils. The day before this took place the Councils in these other plants had negotiated a settlement between the men and the Company, which satisfactorily adjusted all questions at issue. In spite of this adjustment the intimidation of the large number of foreign employees from the striking plant, and the slugging which immediately took place, caused the Works Councils in four of the remaining plants to advise the cessation of operations. The Company accepted the request, and for three weeks these four plants were closed down. The period would not have been so long had there not intervened the terrible race riots and a street car strike. When conditions were right and the Works Councils felt it desirable and safe to resume operations, the plants were reopened. It is at least significant that the resumption of work took place with hardly a ripple of excitement, and with no violence of any kind. In two other plants the adjustment was never questioned from the beginning. We, therefore, found as a result of this labor difficulty that our Works Councils were stronger in the minds of the men than ever before. They stopped work in the plants when it was dangerous to continue to operate. They opened the plants when it was safe to do so (even taking it upon themselves to arrange for the preliminary police protection), and in every way proved themselves worthy representatives of the best traditions of American industry.

#### English and American Systems.

Employee representation has spread more rapidly in England than it has in this country, but it has taken a different form. Much has been written about the so-called Whitley Plan. That may be desirable for England, but it will not do for this country. Here neither industry nor labor is sufficiently organized to set up the elaborate system of councils required under the Whitley Plan. Nor is our government sufficiently versed in the handling of industrial matters to take as important a part in industrial councils as is required under the English system. Finally, the Whitley Plan has organized British industry into two opposing camps, whereas the American system of employee representation

is based solely upon mutual co-operation and a substitution of vertical for horizontal divisions. Class prejudice has no place in this country, either in society or in industry.

After all is said and done, the fundamental point in our industrial trend today is the representative direction of industry; all else is really detail. Profit sharing may come when it is ripe for it to do so. Governmental action or rearrangement of our program of consumption may make it possible for employees to be free of fear of unemployment. Education may raise the standard of working conditions to a real art. But if workmen are allowed self-government they and their employers together can work out these programs. If not, they will never enjoy them. If the step of accepting employee representation is now taken by the American industry as a whole, the future is secure. The working out of all details can be safely left to the joint deliberations of that active intelligence, which, common to both men and management, has placed American industry where it is.

#### Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for April 1, 1919.

Editor, H. L. Sharpe.

Managing Editor, none.

Business Manager, Louis S. DeLone.

Publishers, Building News Publishing Co., Perry Building, Philadelphia.

Owners, Louis S. DeLone, 6419 Drexel road, Philadelphia; Samuel R. McDowell, Narberth, Pa.

Known bondholders, mortgages and other security holders holding one per cent. or more of total amount of bonds, mortgages or other securities, none.

(Signed)

Building News Publishing Co.,  
Louis S. DeLone, Business Manager.

Sworn and subscribed before me this 18th day of September, 1919.

Edward J. Toole, Notary Public.  
(My commission expires Jan. 21, 1921.)

**Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.**

**The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.**

Advertising is nothing more nor less than good salesmanship reduced to print. The business man who can put "sales talk" into type has learned the cardinal principle of good advertising.

## As The Editor Sees It

THE Engineers' Club of Philadelphia has taken the initiative in stimulating public interest in the planning and zoning commissions provided for in the new city charter of Philadelphia.

Architects, Builders, Contractors, the Building Trades and all other public spirited persons and organizations should gladly respond to the invitation of the Engineers' Club. The purposes of a meeting to be held October 10th are made clear in the letter of the Secretary which continues:

"The new city charter for Philadelphia provides that a Planning Commission and Zoning Commission may be appointed by the new administration.

"These Commissions will deal with subjects relating to the living and working conditions in our metropolitan area of such vital importance as housing, recreation, sanitation, transit, reclamation of blighted areas, port facilities, regulation and stabilization of real estate values and other matters.

"It should be noted that the creation of these Commissions is discretionary with council, and in order to stimulate public interest in the necessity of their appointment the Engineers' Club of Philadelphia invites your organization to participate in a conference to be held in the Club house at 1317 Spruce Street, at 8.15 P. M., Friday, October 10, 1919.

"This conference has for its purpose the formulation of a program for the further presentation of this subject at a

public meeting to be held at Witherspoon Hall, Tuesday, November 18, 1919.

"Will you not without fail appoint from one to three delegates to attend the conference of October 10th?

"In order to make this movement forceful and representative, we are inviting the organizations set forth on the accompanying list to participate by sending delegates.

"Respectfully yours,

"H. S. STOCKLEY,  
"Secretary."

It is pleasing to see that a prominent architect, Mr. D. Knickerbacker Boyd, will act as Chairman of the Committee on Arrangements.

\* \* \*

THE great outstanding need of the world today is increased production—every sane thinking person must realize that nothing will do more to stabilize industry than a great speeding up everywhere of output. It is a matter for wonder that labor leaders can dare at this crucial time to precipitate

strikes and all that they mean in loss of time and money. Certainly there never was a time when employees were more willing to admit the importance of labor to the industrial world, and ready to do all in their power to insure justice to the working man. These questions have been most interestingly discussed at the Eighth Annual Congress of the National Safety Council held in Cleveland. In last week's issue of the GUIDE we printed an address delivered before the Congress by Cyrus McCormick, Jr., Works Manager of the International Harvester Company, dealing with Employee Representation. This method seems to be the best answer found so far to the question of how to deal fairly with the employees and give them just representation in the industries of which they are a part.

On this subject E. B. Tolsted, Independence Bureau, Philadelphia, contributed some noteworthy views. In his paper, "Practical Aspects of Employees Representation," Mr. Tolsted says:

The annals of the country are full of examples of misused power both on the part of employers individually and collectively, and on the part of organized workmen. In the interest of the nation as a whole the disastrous effects of misused power must be eliminated. It must no longer be possible for employers by virtue of their financial resources and solidarity to treat workers unfairly, or for the workers through the open strike or the passive "strike on the job" to cripple industry.

To careful thinkers the solution lies definitely along the lines of a clear understanding by each side of its own attitude and of the problems of the other, and of their joint recognition of their relation to society. The result is bound to be in many instances the substitution of responsibility for irresponsibility, of co-operation for antagonism, of good will for ill will. This greatly desired result, the securing of industrial peace and efficiency, is so gigantic a problem that even the best thinkers in the economic field have as yet reached no definite practical solution. We are as yet in a state of flux.

Many workers appear not to be satisfied by good working conditions, shortened hours, and high wages; they strike even after these things have been granted them. No doubt some want a voice in the determination of these matters, although the dissatisfaction is largely due to the spirit of the times. It may be that the real desire is for first-hand information about the conditions which cause managers to come to their decisions. Probably no body of American men, for instance, would deliberately demand wages which they knew would bankrupt the business which employs them.

Of the various plans for producing industrial satisfaction which have been advanced up to the present time, the one which is attracting the greatest attention is employees' representation. Some feel that this is just another short-lived fad; others think that it is here to stay. A safety man cannot help recalling the time when the safety movement was considered a fad of the moment.

Many employers, not hostile to union organization, feel that better results will be ob-

tained through an employees' representation plan than through the customary union channels, because of the direct relation and the mutuality of interest which can be obtained. In effect, the usual employees' representation plan creates a company or household union, sometimes alongside a national union. There need be no conflict between the two.

There are at the present time about one hundred and fifty employees' representation plans in operation in the United States. The details of many of them have been published in pamphlet form or in current magazines. By personal investigation of approximately fifty of these plans, we have found that employees' representation may provide simply an orderly method for the adjustment of grievances; it may include machinery for collective bargaining with reference to wages, hours, and working conditions; it may be the means of eliciting from workers their hearty co-operation and valuable suggestions regarding processes, organization, and policies; or it may involve all of these or any combination of them. Its structural features may be very simple and the procedure altogether informal, or these may be highly elaborate. The power possessed by employees through their industrial representation may be that of "public opinion"—the authority of the representatives being merely advisory to the management—or the management may delegate to the employees final authority in regard to certain specified matters, or authority may be exercised jointly by the men and the management. I wish to emphasize the fact that in no plan which we have investigated have we found the measure of control implied by the term "Industrial Democracy."

For the purposes of this paper I shall regard as an employees' representation plan any plan which provides for committees of employees elected by their constituents to confer with the management in the consideration of matters affecting them, no matter how simple or how few. Ignoring wide variations in scope and form, then, I shall discuss in the limited time available some of the generally applicable facts established by personal investigation of plans used; and without attempting to analyze or even to state the underlying principles, I shall attempt to give some practical suggestions which may be found useful to those about to install plans or to those who contemplate doing so.

It must be noted at this point that the shortness of time during which these plans have been operating and the prejudices of their sponsors and opponents make investigation of results complicated and interpretation difficult. Having adopted a plan, the employer wants to believe it desirable; therefore, it is difficult to obtain adverse criticism from any except those who have never tried the plan or who have been forced into it. It is pertinent to mention, however, that many favorable comments have been obtained even from those who have been forced into adopting a plan. My statement of results embodies in it opinions of employees' representatives as well as of managers, and, as far as it has been possible to make it, is representative of present conditions.

In the following remarks the term "works committee" is used to refer to any kind of representation plan.

#### Results Accomplished by Works Committees.

Several years ago, Henry T. Noyes, of Rochester, stated that his own company, Art-in-Buttons, Inc., after over ten years of periodic departmental meetings, during which the company and the employees had been working earnestly for their joint good, found that approximately 90 per cent. of all complaints

made by the employees were justified in whole or in part. Mr. Noyes hazarded the opinion that there must be under the usual form of management a tremendous aggregate of dissatisfaction incapable of elimination chiefly because the management knew little or nothing about it. Consequently we have not been surprised to find that the existence of a works committee not only brings complaints to light before they are too serious to handle, but that it eventually reduces the number and seriousness of complaints.

Almost invariably foremen have undertaken to reform their ways when their attitude of petty tyranny was the cause of grievances, and have endeavored to adjust complaints satisfactorily when first brought to their attention, rather than to allow their negligence to be the subject of discussion by committees, and thus also by the rank and file of employees, and eventually the object of a reprimand from the management. This means that complaints are more and more adjusted out of court, consequently the time of the works committee is reserved for more important matters.

While it is true that a majority of the matters are usually decided in favor of the complainant, it seems to be the feeling of most concerns that decisions are, in the main, altogether just. It should be pointed out, moreover, that in a large proportion of the cases it is immaterial to the management whether the decision is one way or the other, and it is obviously wiser to have the decision in such cases in accordance with the wishes of the employees. Many of the matters decided by the committees are such as have heretofore generally been left unsettled and allowed to become the cause of constant complaint and unrest.

Most of these plans are so worded that matters relating to discipline and discharge may be heard by shop or works committees, the same as other questions. In a few cases, the employees have been given unusually extensive authority in regard to such matters. The management of one company, for instance, granted to the employees permission to lay down the rules governing disciplinary measures. As a result, the conference board of the employees' association adopted rules and penalties governing all employees. The penalties imposed are somewhat lighter than is customary in most plants where the management retains absolute authority, being principally fines or suspension, rather than discharge, but they have the effectiveness due to their representing the judgment of associates rather than superiors, and this seems to result in a reduction of the number of offenses. In other cases the employees have imposed penalties more severe than the company would have done, and the company has been forced to request a modification of the penalties.

The Filene Co-operative Association, which for many years has had authority to amend or to initiate any rule affecting the discipline or working conditions of the employees of the store, has reduced the number of offenses through its "arbitration board," which has final authority with reference to discharges. The Filene management goes as far as to permit employees to be represented by legal counsel at hearings. Mr. Cory, vice president and store director, states in his genial way that he and his associates have been subject to some remarkable excoriations at these hearings. That this broad-gauged attitude has paid in an industrial relations sense is beyond question. The American Rolling Mill Company reports that discipline has been

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Garages (2)**, 300-2 West Hortter street, Philadelphia, \$3,000. Architect, private plans. Owner, Robert Killough, Wayne avenue and Duval street, Philadelphia. Stone, 1 story, 16 feet 4 inches x 23 feet, cement floors, slag roof. Owner will build.

**Garage**, Thirty-fifth and Market streets, Philadelphia. Architect, I. W. Levin, 536 Ritner street, Philadelphia. Owner, Joseph Lever, 2347 Somerset street, Philadelphia. Brick and steel, 2 stories, 75x145 feet, slag roof, cement floors, steam heat, electric light, rolled steel skylights, steel rolling doors, roof ventilators, dampproofing. Owner will build.

**Office, Garage and Lumber Yard**, Third below Girard avenue, Philadelphia. Architect, H. B. Weldon, 10 South Eighteenth street, Philadelphia. Owner, Howard Ketcham, on premises. Brick, concrete and frame, 1 story, 100x200 feet, slag and wood roof, electric lighting. Architect taking bids due October 11th. F. L. Hoover & Son, 1023 Cherry street; Smith-Hardican Co., 1606 Cherry street, and W. O. Springer, 1624 Latimer street, are figuring.

**Offices (alts. and add.)**, 132 Dock street, Philadelphia. Architect, J. Fletcher Street, 129 South Fifth street, Philadelphia. Owner, E. L. Armstrong & Co., on premises. General interior alterations. Architect has received bids.

**Apartment House and Store**, 6246 Market street, Philadelphia. Architect, Frederick T. Uezzell, 717 Walnut street, Philadelphia. Owner, Isadore Weinberg, care of architect. Brick, 3 stories, 25x100 feet, slag roof, oak and pine floors, stone foundations, electric light, tile work (heating undecided). Owners taking bids due as soon as possible from Mitchell Bros., 2125 Race street, and Smith-Hardican Co., 1606 Cherry street, Philadelphia.

**Residence (alts.) to Apartments**, 5929 Spruce street, Philadelphia. Architects, Durham-Banville Co., 323 Walnut street, Philadelphia. Owner, James Kincaid, 5929 Spruce street, Philadelphia. Brick, 2 stories, slag roof, stone foundations, steam heat, electric lighting, carpentry. Revised plans in progress.

**Garages (10 small) (1 large)**, Seventy-second and Paschall avenue. Architects, Clark & Dudnick, Drexel Building, Philadelphia. Owner, Samuel Greenstein, 7228 Woodland avenue, Philadelphia. Brick, 1 story, 48x52 feet, slag roof, cement floors, steam heat, stone foundations, electric lighting, gasoline storage system. Architects are ready for sub-bids.

**Hospital Building**, Broad and Ritner streets, Philadelphia. Architect, Horace W. Castor, Stephen Girard Building. Owners, Methodist Episcopal Hospital, Broad and Ritner streets. Brick, concrete and steel, 2 stories, 96x123 feet, slag and tile roof, terrazzo, tile and marble floors, hollow tile, metal lath, damp-proofing, stone foundations, hollow metal

doors, iron stairs, iron work (heating, plumbing and electric lighting reserved). Architects taking revised bids due October 15th. Cramp & Co., Denckla Building; H. E. Baton, 1713 Sansom street; Roydhouse-Arey Co., 112 North Broad street, and William R. Dougherty, 1713 Sansom street; Frank E. Wallace, 1220 Chancellor street, are figuring.

**Residences (66) (2)**, Fifty-sixth and Lebanon avenue, and (64) Fifty-fourth and Lebanon avenue, Philadelphia, \$405,000. Architect, private plans. Owner, Martin Maloney, 2405 North Fifty-fourth street, Philadelphia. Brick, 2 stories, 16x34 feet, 13x10 feet, and 16 feet 4 inches x 44 feet, slag roof, hot water heat, electric lighting. Owner will build.

**Market House**, Northeast Corner Gaul and Gordon streets, Kensington. Architect, I. W. Levin, 536 Ritner street, Philadelphia. Owners, Greenblatt Bros. & Saff, 2425 East Dauphin street. Reinforced concrete, steel and brick, 1 story and basement, 70x100 feet, slag roof, reinforced concrete floors, low pressure steam heat, electric light, rolled steel sash, hollow metal skylights, steel rolling doors, (1) electric elevator. Architect and owners will be ready for sub-bids in a few days.

**Residence (alts. and add.) to Store and Apartments**, 1932 West Susquehanna avenue. Architect, I. W. Levin, 536 Ritner street, Philadelphia. Owner, S. Steinberg, on premises. General interior alterations, brick, 3 stories, add. 18x35 feet, slag roof, hardwood floors, hot water heat, electric light, tile work, marble front, hollow metal doors, plumbing. Owner is taking sub-bids.

**Loft Building (alts.)**, 821 Cherry street, Philadelphia. Architect, Jesse T. Hoekstra, Presser Building, Philadelphia. Owners, Cornelius Building, 811-21 Cherry street, Philadelphia. Brick, 5 stories and basement, changes to entrance, roof repairs, steam heating, electric lighting, plumbing, (1) electric elevator, terrazzo work, metal ceilings, mechanical equipment, changes to boiler room. Architect will be ready for bids in ten days.

**Building (alts.)**, 1420 Walnut street, Philadelphia. Architects, Bailly & Bassett, 421 Chestnut street, Philadelphia. Owner, Howard A. Riley & Co., on premises. Carpentry, mill work, marble work, plastering, painting, glazing, hardware. Architect has received bids.

**Residence**, Wayne avenue, near Lincoln Drive, Germantown. Architect, C. A. Ziegler, 1218 Chestnut street, Philadelphia. Owner, name withheld. Stone, 2½ stories. Plans in progress. Will be ready for bids in ten days.

**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

(Continued from page 612)

greatly improved as a result of the shop committee in its sheet metal and tin shop.

Many companies report that co-operation is greatly increased as a result of their works committee. The committees of the American Multigraph Company urged the management to discharge "slackers" at a time when the entire production of the plant was essential for war purposes. The committee of the Midvale Steel and Ordnance Company recently submitted a resolution to the management recommending that in laying off men, superintendents give preference to American citizens and in general endeavor to rid the works of radicals, Bolsheviks, and other undesirables. This resolution was passed upon favorably by the general superintendent and incorporated in an order which he sent to all of the department superintendents. The Prinz-Biederman Company attributes to its works committee the fact that many better class workers who had left the company returned to its employ.

One very definite advantage of works committees which seem to be reported without exception is that representatives take back to the employees from the meetings a more adequate appreciation of the problems of the management, and that this, together with the increased comprehension by the executives of the problems, desires, and ambitions of their workers, results in a much better understanding on both sides.

One Board of Directors showed its faith in the educational value of a works committee by authorizing the employees of the plant to elect a "board of operatives," to take over the complete management of four hundred houses owned by the company. A sum of money was set aside to be expended by the board of operatives on the repair and upkeep of the tenements. The company reports that while the employees have made several somewhat serious blunders in the management of the properties—such as putting a new roof on a house which should have been torn down—as a whole the education of the employees in the problems of management seems to be worth all that the company is spending on it.

One company reports that during the first few months after the establishment of its works committee system, production was increased about 20 per cent. and expenses advanced less than 5 per cent., while another reports an increase of 15 per cent. in production without an advance in wages. Both attribute the increased efficiency largely to the better plant spirit brought about by the works committees. The White Motor Company claims that the works committee was responsible for considerable reduction in turnover and absenteeism. The American Multigraph Company ascribes to its plan of representation

a great reduction in the amount of tardiness. The Leeds and Northrop Company has observed a marked decrease in the amount of time wasted by workers since the shop committee was established. The same company reports that its works committee appointed a special sub-committee on housekeeping, which conducted clean-up campaigns which greatly improved conditions of the plant. The "house of representatives" of the Edmund D. David Company established a suggestion committee and awarded prizes to employees for suggestions of improvements in machinery, methods, and designs.

Several concerns report that, while at the first election a number of "radicals" were elected, the employees soon learned to distinguish between mere talkers and competent representatives. This resulted in the election the second time of conservative persons who feel the responsibility of representing the employees effectively and winning the confidence and respect of the management. Several company officials with whom we talked stated that the employees' representatives were frequently more inclined to be conservative than the management's representatives.

Without exception, where a works committee has been in operation for several months, the company reports that it has revealed capacity for leadership among employees which otherwise would have been suppressed or have found an outlet in some undesirable channel. William Demuth and Company has made it a practice to regard its employees' representatives as the natural group from which to select assistant foremen. Its attention was called to this possibility by the recommendation of the representatives that a certain assistant foreman be removed because of incompetency. The management, after investigation, complied with their request and appointed the chairman of the workers' committee to fill the vacancy. The Joseph and Feiss Company reports that their works committee "has greatly developed leadership."

It has been reported that some of the best leaders developed by industrial representation have ultimately been forced out of the company by unpopularity. These men, elected by their fellows to represent them, because of their intelligence and spirit of fairness, agreed with the management too often to suit their constituents. Do not be discouraged if the representatives of the workmen disagree with the management. The men will distrust their own representatives if they agree too much with the employer. Do not educate the representatives too far ahead of the rank and file or they will be accused of being "company men."

A classification of cases which were settled during a four months' period of employees' representative in three plants belonging to a large company is indicative of results in many other companies. Following is the classification:

Apprentice, back pay, charity, deportment, discharge, docking of pay, economy, employment, equipment, health, holidays, lighting, living conditions, machine equipment, overtime, pay methods, pay time, piece price, police, practice, promotion, quitting time, relief, rules, safety, sanitation, shifts, short pay, suspension, termination, theft, working conditions, working hours, time clocks, repairs. The total number of cases for this period was one hundred fifty-four for the three plants, of which one hundred thirty-two were settled in the affirmative, that is, in accordance with

the request as originally presented to the committee.

Our study reveals the fact that while minor matters of complaint involving personal discrimination are likely to be the first matters brought before the committee, it is not long before the committee is required to consider broader questions involving a discussion of shop practices, efficiency, discipline, and company policies. Industrial representation has tended, I believe, to make lighter the task of management by reducing the causes of friction between employers and employees, and by arousing in the workers a constructive interest in the progress of the industry in which they are engaged.

#### Instillation of Representation Plans.

Industrial representation is in successful operation in plants varying widely as to process and products, size and complexity of organization, and as to the character of the working force. None of these factors seems to determine the success, although each of them affects it and must be taken into consideration in working out the application of any plan to particular needs. But here are a few suggestions which I think it would be well for every one to consider when contemplating a plan:

Install it under peaceful conditions. One large company inaugurated a plan as the result of a strike, and the plan ended in another strike some time later. The company is now attempting to make a new start. To propose a plan to men on the verge of a strike is also almost certain to result in failure to win over the men.

To attain its highest success, a plan should be developed gradually, each step in so far as possible resulting from suggestions or requests of employees. By all means, do not impose a ready-made plan; let the men help work it out; it will be a better plan and they will feel that it is their own. Remember the attitude of our forebears toward English-made laws applied to the colonies. And no matter how good the plan seems to be, actual use will show need for changes.

See that the plan is simple in form, so that procedure under it is easy to understand and to carry out. As to the specific form, we find that the best results have been obtained with the joint-committee. But give opportunity for free discussion, that is, discussion without the presence of the management. It has been found good practice to alternate joint and separate meetings, with final action taken only in joint meetings. At a banquet held recently by the Standard Oil Company of New Jersey for the representatives of the men and the management, one of the employees' representatives suggested the establishment of separate boards for the management and the men. This action was not especially desired by the representatives, who had already taken up the subject once and voted against separate boards, but the men felt that their delegates would not speak freely before their "bosses."

In some plans the committees deal only with working conditions and welfare work, such as light, ventilation, locker rooms, etc.; in some they deal with all matters which directly concern the worker, including wages and hours. There are drawbacks to both plans. On the one hand, committees which have been restricted in their activities have grown restless and felt that they were deprived of their just rights. On the other

hand, committees which have been given free sway have sometimes failed to use judgment in the determination of hours and wages. In one plant, it is said that wages were forced up, despite the company's claim that they could not meet an increase. The reply of the men was, "Raise the price of your product." Experience would seem to show that a middle course works best. Give your committee supervision over working conditions and welfare work; educate them through the use of this function to a better understanding of the position and problems of the management; then as they show themselves capable of handling the more serious problems, extend their authority toward grievances, hours, wages, absence, cost of living, community conditions, etc. In most cases, it will be found that the desire for a wider scope of activities will go hand in hand with the growth of ability to handle the bigger subjects.

We advise that every employee, man or woman, citizen or alien, be made to feel as far as possible that he has a part in the operation of the plan. In one plant, voting was restricted to citizens, but all were, of course, allowed to present grievances. A group of foreigners did not understand this point, and struck because they thought they had no means of presenting their grievance. After the plan has been formulated be sure that every employee knows what it means and who made it. The men first consulted will advise as to the best method to be followed. Use the plant organ again and again to supplement word-of-mouth publicity. Do not hurry at this, or, indeed, at any point. Frequently the management fatuously prides itself on its excellent plan, when the men know nothing about it. In a plant which we visited several months after the installation of a representation plan, almost half the men who could not speak English either did not know of its existence or had no idea of its purpose.

It is especially important to make it plain that the plan in no way interferes with membership in unions or with existing relations of the management with labor unions.

Keep adequate record of all meetings and make them accessible to all. The main decisions should be posted on bulletin boards in each department and published in the plant organ.

Usually best results follow holding meetings during working hours. In one case, which has come to our attention, the representatives requested that the conferences be held out of hours, as they would feel less constraint in voting as they pleased. As a rule, however, committees which meet outside hours have failed to hold the interest of the representatives.

This lack of interest is one of the foes of employees' representation. Many feel that after the first enthusiasm attendant upon any new enterprise has worn off, the committee will fall into the apathy characteristic of so many committees. This has not generally been true. It should never be the case, for the matter is of vital interest to both sides. As with any other form of human activity, the success of a plan is in a large measure dependent upon the standing and capacity of the men who sponsor the plan. The best men and their best efforts are the answer.

#### Success or Failure.

The degree of success or failure of any plan of employees' representation depends not upon its form, the size of the company, the

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO.,  
Tasker Street Wharf, Delaware River, Philadelphia.

nature of the industry, or the character of the working force, but upon the understanding, by both management and the men, of what the plan means at its inception; by the management, of where it is likely to lead; and upon the degree of mutual confidence existing between employer and employees. There must at least be a foundation of confidence and cordiality if the management and the men are to strive together toward an industrial ideal.

The ideal industrial organization is one in which there is uniformity of purpose and friendly co-operation throughout the entire membership, ready recognition of the ideas of every member, promotion of those who prove themselves most capable, wise and fair

leadership, and equitable distribution of the earnings created by the joint efforts of the members.

There needs to be developed throughout the body of workmen the same productive co-operation which the president of every prosperous company gets from his fellow officers and their immediate assistants.

When this spirit has permeated an organization there will never again be a serious labor problem. I believe this result can be obtained because it is not only theoretically sound, but it has been done. A plan of industrial representation wisely conceived and fairly conducted is an important stepping stone to the industrial millennium.

## THE HOME-OWNERS INTEREST IN CITY AND TOWN PLANNING AND EXPANSION

PERCY R. MACNEILLE

The Homestead Commission of the Commonwealth of Massachusetts, one of whose functions has been to buy land and build homes with public money, afterwards selling these homes on easy terms to industrial workers, has an interesting comment to make in a recent annual report. This comment relates directly to city planning and its advantages to the community and to the individual. Following is a quotation from the report referred to:

"The attitude of local public officials has not generally been encouraging to the proposition that the growth and development of cities and towns should proceed in accordance with well-considered plans. Failing to grasp the fundamental fact that proper planning will save, and not spend, the public funds, and not realizing that unrelated, haphazard effects are wasteful beyond conception, petty officials haggle over the pennies needed to make proper plans while they sacrifice thousands of dollars and the future well-being of their communities by proceeding without forethought or system making changes here and improvements elsewhere, with no logical sequence and no apparent relation to each other.

"The results are disastrous to the public health, convenience and finances. Proper planning would stabilize values, save much of the cost of necessary improvements, and bring much-needed revenue to the public treasury; would promote public convenience and give greater safety from accident and fire, and save thousands of dollars by effecting economies in transit and transportation; would promote health and make life more wholesome and the city more beautiful."

The financial and social benefit of city planning to the individual taxpayer and home owner of a city is plainly indicated in the foregoing quotation, but in order to explain in more detail the method and purpose of city planning, we shall con-

sider briefly the many subjects which fall naturally under this head.

The first of these as outlined in a foregoing installment of this article is as follows: (1) Present city plan with recommended changes at bad traffic points and recommendations for the location of new public and semi-public buildings including railroad stations, hotels, theatres, churches and various institutions.

In all of our cities we are familiar with certain points, particularly in the business district where the juncture of several important traffic streets has brought about a condition of congestion in traffic. Such a condition has several objections, the overcoming of which will have a definite value both from the business viewpoint and that of public safety. At such points the conditions for pedestrian traffic are usually bad and it is difficult to provide safe crossing. For vehicular traffic there is not only the danger of accident, but the congestion at such points in many cases causes delay and disturbance of normal traffic. Again we find that in many cases business streets which were of adequate width for commercial and traffic activities years ago have been found too narrow, with the result that sidewalks are overcrowded and there is great difficulty in dividing parking space for automobiles, and in the maintenance of delivery business from the various stores. Aside from the general public inconvenience of business streets which are too narrow, this condition exerts a definite restriction on property values. The merchant does not get full benefit of his window display; nor can buildings well be constructed of the height to warrant the cost of land.

The problem of changing these conditions in closely built up sections of the city is at best a difficult one to meet. The drastic changes which should be made by cutting through and widening streets are impossible because of the cost which

would be involved. The city cannot well demolish good buildings for the purpose of developing better conditions, and as a result the problem has to be met along the lines which will provide some relief, but will not work injustice to the individual property owner or cause the city a too great expenditure in condemnation of buildings.

The problem of the city planner is, therefore, to make a study of bad traffic points and important street intersections with the idea of providing in some economical manner, new traffic routes which will relieve the flow at the particular point under consideration. It is often found that by inexpensive changes and the condemnation of a few old buildings, much important traffic may be swung away from the point of congestion.

In this manner roads may be developed which will handle a large proportion of the traffic that has heretofore caused congestion at any given point. Another method of relieving congestion is to provide better routing of through automobile traffic, discouraging the use of streets which pass directly through the congested traffic point. The creation of one way streets and the rerouting of surface trolley service will in many cases aid in the relieving of congestion. The widening of important business streets which have been closely built up, is impracticable in its immediate application, but it is entirely possible to establish a set-back line which will limit new construction, and through the process of years of application of such a building restriction, the street will gradually assume its proper width as the various older buildings pass their stage of usefulness and are replaced by new commercial structures.

In studying the business streets of many of our cities we find that there are many encroachments on public property. These consist of ornamental entrances, extension show cases, ornamental columns and similar structures which have been built to project on public property and which impede traffic by causing sidewalk obstruction. Signs, awnings and other projections are in many cases built so that they extend for some distance over the street blocking the view and giving an unsightly and disorderly appearance to main thoroughfares. This condition is met by the enforcement of the removal of all such obstructions to traffic and the view. Notice is given with ample time to the various property owners to bring about the removal of any encroachments on public property. If the encroachment is not removed, the method usually followed is to have the work done by the city and its cost added to the tax bill against the property. In this manner New York City, a few years ago caused a drastic clear-up of important business streets and the beneficial results

## *The Readers of "Builders' Guide" Spend \$500,000,000 Annually*

and this half-billion dollars buying power is the clearest indication of the advertising value of space in "Builders' Guide."

You reach in "Builders' Guide" architects, builders, contractors, the building trades, and owners of new buildings in Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

In the columns of "Builders' Guide" you get the attention of men who specify and use building materials; you get the attention of men to whom you can sell; you get advertising efficiency.

were many.

Property owners and taxpayers should as a unit be interested in the impression which their city makes on the visitor, as the expansion of the city, commercially and industrially depends to a great extent on such impression. We find, therefore, that due interest attaches to the question of locating new public and semi-public buildings. It is found in many instances that the value of such buildings to the city is partly lost through poor location and inaccessibility. In carrying out a city plan, therefore, consideration is given to the possibility of locating railroad stations, hotels, theatres, churches, institutional and public buildings at points which will be convenient not only to incoming travellers, but to those citizens who have occasion to use such buildings. Many times because of transportation conditions, land values, general convenience and for various local reasons, it is usually found that such buildings are confined to certain logical districts of the city. By arranging for their location at strategic points, particularly on open public squares or community centers, full benefit may be gained from the architectural merit of the building as well as from the utilitarian standpoint.

The next important consideration in working out a city plan, is the creation of a definite development scheme for the sections of the city lying immediately outside of the built-up portions. By a careful study of past development of the city, and the natural conditions in outlying territory, it can be quite clearly established what sections of the city will develop more rapidly.

In the outlying territories subject to development, the city plan will show the location of future streets, bridges, tunnels and other components of a traffic system, both for business and residential districts. In this manner through a study of the contours of surrounding land the course of streets may be made such that there will be as little filling and grading as possible in their construction, thus achieving economy in the expenditure of city funds which may be appropriated for additional street construction. In addition to this by the proper laying out of streets all points of traffic congestion, narrowness of streets and other layouts from which the older cities suffer may be avoided.

Having outlined in a general manner some of the various direct benefits which the taxpayer may expect from city planning, it might be well to refer again to an interesting definition of the term "City Planning" which was widely circulated by the Massachusetts Homestead Commission. This definition was as follows:

City Planning means—

Conservation of human energy and preservation of life, particularly child-

life.

Economy, necessity, scientific reality.

Conformity to definite plan of orderly development into which each improvement will fit as it is needed.

Saving in cost of public improvements by business methods for city business.

Correlation of the city's activities.

Encouragement of commerce and facilitation of business.

Preservation of historic buildings with their traditions.

The development of an American city worthy of civic pride.

The rule of common foresight and prudence.

Happiness, convenience, health for all citizens.

Not merely superficial beautification.

Not the immediate execution of the whole plan.

Not extravagance, dreams, fads.

Not the surrender of the city to artists with vague schemes for civic adornment.

Not wholesale alterations at great expense, with no assured financial returns.

Not the interruption of commerce and business.

Not the destruction of the old landmarks and city individuality.

Not the imitation of London, Vienna and Paris.

Not the rule of change with ruinous expense and debt.

Not merely expensive boulevards and parks available only to the rich.

—*American Property Owner.*

## BUILDING OUT OF ODDS AND ENDS

How to have more comfortable and attractive homes as well as more healthful ones for the same expenditure of money when they rebuild, are some of the things the American Red Cross is teaching the people of the devastated areas abroad.

In most of the countries the new buildings will follow the general type of architecture of that country. The new Czecho-Slovak republic, however, has engaged an American to standardize architecture and engineering along American lines.

The housing problem in all of the devastated countries is still acute and in some places where the refugees are returning in vast numbers their government is literally tearing its hair trying to find an answer to "Where will they live?"

The Red Cross is assisting the Czecho-Slovak government to design and supervise the erection of temporary homes for the laboring people. When the Red Cross first sent a unit to Devorste, Serbia, it found that of the one hundred and forty homes there, the Bulgars had completely destroyed one hundred and

thirty-nine. The people were living in caves or holes with corn fodder roofs. This is not an exception, but is repeated in thousandss of towns and villages scattered through the war zone.

In the same building where Austria forged her big artillery at Pilsen, Bohemia (now included in the republic of Czecho-Slovak) the American Red Cross has housed the penniless victims of the war. Certain large buildings of the plant have been converted into living quarters until new homes can be built.

Portable Hospital barracks, nurses' homes, canteens, etc., used during the war by the Red Cross, have been "knocked down" to make homes for the people who have returned to find piles of bricks where their former homes stood.

Powder, shrapnel, and Hun wantonness wrecked 500,000 buildings in France alone and completely destroyed 250,000 of them. So these portable barracks were a veritable "God-send" to the people, who were living as best they could in makeshift houses. Pieces of corrugated iron had been salvaged for roofs, while old stones and shell-torn bricks stuck together with mud and clay made the walls, and all the dwellings had mud floors.

The type of portable barracks used most successfully by the Red Cross in its emergency work weighs five tons and is 97 by 17 feet, with twelve large windows, can be erected in two days, and will shelter forty people.

The roof, floor, and sides are of double thickness, providing an air space for warmth. The floor is of hard pine from the Alps, the roof of matched boards, the inside tongue and groove, the outside covered with tar paper. Practically no nails are used, the panels being bolted into place.

All the carpentry work on these barracks is done before they leave the shop, so that only common labor is required to erect them. The *mutiles* are the labor in many places. Carpentry seems to be a favorite vocation among these hapless victims of Prussianism.

The fame of the Red Cross City at Pisa, almost under the shadow of the leaning tower itself, had gone broadcast. It is a monument to what Red Cross ingenuity aided by American methods of building and engineering, could make out of unusual building material. It even went so far as to make concrete out of the stone and lava of Vesuvius.

Eighty of the ninety-one buildings erected in this complete little city made homes for 1000 Venetian refugees. Though a major portion is wanted for the great American program of better health activities, a part of the \$15,000,000 being asked for at the time of the Third Red Cross Roll Call from November second to eleventh will carry on to completion this work of rebuilding abroad.

# CARTER CONCRETE

The Kind That Lasts

**Carter Concrete** PAVEMENTS, FLOORS, CONSTRUCTION—BUILT BY SPECIALISTS SINCE 1888—BUILT TO PREVENT CRACKING, CRUMBLING and DECAY—BUILT TO LAST.

## If You Want Flooring That is Wear Proof

Choose flooring that resists abrasion, for abrasion, like erosion is a physical force that causes the gradual crumbling and wearing away of every atom of flooring material.

Immunity from abrasion is the distinctive feature of

## Mineral Flooring

No amount of wear can cause Mineral Flooring to crumble and disintegrate for it is made of specially tough wear resisting mineral rock—stronger and more durable than natural stone.

Mineral Flooring is absolutely fire proof, vermin proof, damp proof. We install any size job in a single day.

MINERAL FLOORING CO.

### A Few of the Reasons

why you should install the **Peninsular Combination Range**:

A Range that burns either Gas, Coal or Wood without any changing or removing of parts—separate or both at the same time—whose oven is always ready for instant use.

A Range that takes up no more space than an ordinary kitchen range, bakes and broils perfectly under all conditions and gives a lifetime of such service.

A Range that makes the kitchen cool in Summer, warm in Winter—beautiful in design, substantial, and easy to keep clean. Secure our prices.

## KLEIN STOVE CO.

Front St. & Fairmount Ave.

Bell Phone, Master 3879

PHILADELPHIA, PA.

## SHEATHING and METAL LATH

erected at one operation. Time and Labor Saver

All the steel with the exception of the binder ribbons is on the face of the felt, consequently every ounce of the strength of the metal is brought into play—equal reinforcing being provided in every direction, thus impartially distributing the stress over the entire area.

### Tends to Prevent Cracking of Plaster

The strands run diagonally, slanting in both directions. Hence, no matter in what direction a crack may start to form, a strand of steel will be found lying across its path to resist the tendency.

### Insures a Perfect Bond—Saves Plaster

## An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

### ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

## As The Editor Sees It

IN glancing recently at the "Help Wanted" column of a local newspaper, our attention was attracted to the "ad" of a large shipbuilding plant which claimed to be the "safest shipyard in America." The value of safety is everywhere gaining recognition, so well demonstrated by the widespread interest in the Eighth Annual Safety Congress held recently in Cleveland.

Statistics from the Bureau of the Census of the United States Department of Commerce show that as a result of the accident prevention movement the total of accidental deaths in the death-registration area of continental United States during 1917 was reduced by approximately 6,500, as compared to the previous year.

"Machinery accidents caused 2,112 deaths, or 2.8% per 100,000, a rate materially greater than that for any preceding year covered by the Bureau's mortality records." "The Fundamental Principles of Safe Guarding" were presented at the Safety Congress by Sydney J. Williams, secretary and chief engineer, the National Safety Council, Chicago. Said Mr. Williams:

"The first half of our subject is—what shall I guard? The second half is—how shall I guard it?

"If you want your plant to be 100 per cent. safe, the answer to the first question is—guard every moving part, wherever located, on which a workman might be injured if he came in contact

with it in any way or form any cause whatsoever. If the moving part is in a place "where nobody ever goes," remember that someone is likely to go there sooner or later, in connection with the repair or maintenance or alteration of the machinery itself or of the building, or for some other reason which you cannot anticipate. You probably have heard the classic story—a perfectly true story—of the man whose heel was cut off by an unguarded gear 14 inches below the ceiling. The man was standing on a scaffold, working on another shaft nearby; to brace himself he placed his foot against the shaft on which the unguarded gear was located, his foot slipped, and was caught in the gear. Many similar examples could be quoted of accidents occurring in out-of-the-way places. Recognizing this fact, the Illinois Steel Company rule book—to mention only one example—requires that all gears, wherever located, must be enclosed.

"You may be puzzled by attempting to apply this principle to the guarding of overhead shafting and belts. Many shafts contain miles of overhead shafting, which it is almost a physical impossibility to guard. On the other hand, oilers and repairmen are frequently injured, sometimes fatally, on unguarded overhead shafting or belts. The only solution is, if the shafting positively cannot be guarded, to prohibit absolutely any work on such overhead transmission while it is in motion. Repair work,

shortening of belts, etc., can be done during the noon hour or at night; oiling likewise—or, better still, install automatic oilers or oilers which can be filled from the floor by using a special oil can with long spout. For details, see the National Safety Council's Safe Practices pamphlet on this subject.

"A gear or belt or other dangerous moving part which happens to be located below a table, or in some other place where it is partially hidden, is not thereby made safe. Someone occasionally must reach under the table to sweep or repair the floor or oil or repair the machine. Someone may slip or stumble so that his arm comes in contact with a gear or belt which would be safe for the workman standing in his normal position. The immigrant totally ignorant of machinery—and it is hard for us to realize the completeness of the ignorance on this subject, on the part of foreigners brought up in farming districts—may deliberately put his hand or his finger into an opening that looks interesting, just to see what it is. If he finds that "it" is an unguarded gear, it is easy to say that the accident is his own fault—but that does not relieve our obligation to pay his compensation, nor does it restore him to his vacant place in the gang.

"What I have said of gears and belts applies equally well to any moving part on which a man might be injured—counterweights, cranks, reciprocating parts

such as a planer bed, and so on; also, of course, to the operating point of machines.

"The second half of the problem is—as already stated—"How shall I guard it?" Here are a few points to remember:

"1. A safeguard should be so designed and constructed that it will prevent *all* accidents on the part guarded—not only accidents to the operator while at his regular work, but also to the operator or passers-by in case they slip or fall or carelessly touch the machine.

"2. The guard should not interfere with production. If it does, it is liable to be taken off. In designing a guard it is generally wise to consult the man who will use it.

"3. In general, the guard should be attached to the machine and not to the floor; if attached to the floor, use a connection which will interfere as little as possible.

"4. The guarded part must be easily accessible for oiling, inspection, and repair. The door or removable section provided for this purpose should be hinged or otherwise attached to the remainder of the guard, or to the machine. If not, it is likely to be left off permanently.

"5. The guard should not interfere with cleaning and sweeping around the machine. It should, therefore, be kept generally about six inches above the floor.

"6. The guard should be strong enough to resist injury and keep its shape. A light, flimsy guard soon becomes bent and is discarded. A substantial guard is cheaper in the end.

"7. Incombustible guards are preferred. Wooden guards, soaked with oil, may become a serious fire hazard. Metal guards are neater and wear much better. "Metal guards look as if you wanted to; wooden guards look as if you had to." Guards may be made of cast iron, sheet metal, wire mesh, expanded or perforated metal, or slats. Where subjected to acid or fumes, wooden guards may be necessary.

"8. It is desirable to interlock the guard with the operating mechanism, where possible, so the machine cannot be operated unless the guard is in place.

"9. A safeguard can often be so designed that it will also serve to prevent wear on the parts guarded—for example, a solid gear enclosure.

"Let us consider the application of these suggestions to the design of gear guards. Cast iron guards are preferred because they may be made to fit more snugly, present a better appearance, and protect the gears from dust and injury. In shops having similar gears on several machines the cost of patterns and cast

iron guards will be no greater than the cost of 'built-up' guards. A cast guard of one machine may be used as a pattern for making guards for similar machines.

Guards for a variety of machines, and in many sizes, may be more cheaply made of sheet metal. In large guards, an angle iron is used to make the joint between the flat sides and the curved part of the guard. In guards smaller this joint may be made by cutting projections (like saw teeth) on each side piece and bending these over to form a smooth curve. The joint may then be made either by spot welding or by riveting. Short pieces of angle iron may also be used to form the joint—about  $\frac{3}{4}$ " $\times$  $\frac{3}{4}$ " $\times$  $\frac{1}{8}$ " angles, one inch long, 3" or 4" apart.

"Gears should be completely encased; or where this is impracticable, should have a band guard with side flanges extending inward beyond the root of the teeth. If there is a spoke hazard, the gear should be completely enclosed, or filled in between the spokes.

"Belts, flywheels, shafting and large gears are often guarded by an open-work rather than a solid enclosure. Such guards should be so designed that no one can get his hand or his finger into the danger point even if he tries. If the guard comes within four inches of any danger point the opening should not be greater than one-half inch square, which is small enough to exclude fingers. If more than four inches away—which is about the maximum length of a man's finger—the opening may be larger than one-half inch, but not larger than two inches square, this being small enough to keep out a man's hand. If a slatted construction is used, the slats should not be more than one inch apart.

"The safety engineer's greatest difficulty is in guarding machines on which men are working. Let me repeat that it is very important not to attempt to guard machines in a way which will interfere with production. The great majority of both foremen and workmen will seriously object to such a guard, will use it under protest, and when the opportunity arises they will take it off and not put it back. I have time to mention only two examples—the circular saw and the punch press.

A guard is not the only essential for safety in operating a circular saw. For ripping, it is very important that the saw be provided with a splitter. Keeping the saw sharp and properly set will greatly decrease the danger of throwbacks. The floor where the operator stands should have a non-slip surface.

"Many shop men say that it is impossible to guard a circular saw without interfering seriously with operation. The

safety rule book of a large company contains a similar statement. In a great majority of the woodworking shops which I have visited, some, at least, of the saws have not been guarded or some of the guards have not been in use.

"I remember, however, two woodworking shops where every saw was guarded and every guard was in use—the Westinghouse Electric and Manufacturing Company, at Pittsburgh, and the Commonwealth Steel Company, at Granite City. There doubtless are others, but I do not happen to have seen them. In each of these two shops every circular saw was provided with a guard which completely covered it when not in use, and which rose automatically from the table as the stock was inserted. I watched men operating these saws, and the guards did not seem to introduce the slightest difficulty. They were of very light construction, and when the stock was shoved in they rose without apparent effort—the larger ones, at least, being counterweighed. The men in charge of these departments told me that the guards did not interfere at all with production, and, in fact, that the men now would not work without them, because they felt that they were so much safer. I do not blame the workman or the foreman who objects to using a cumbersome, heavy, non-adjustable guard.

"Special work on circular saws sometimes is difficult to guard. In some cases these difficulties may be overcome by careful study. In a few cases they probably can not, and the guard must be temporarily laid aside, being hinged or pivoted for that purpose. Where this must be done, another safeguard can often be introduced. For example, in grooving the edge of a board, provide an auxiliary guide or fence, so that there will be a guard on each side of the saw, thus keeping hands away from contact with it.

"The punch press—using that common term to include all kinds of power presses—has, with the circular saw, the doubtful honor of causing more injuries, and especially more permanent injuries, than any other kind of machine. Where possible, the best guard is an enclosure around the plunger, which makes it impossible to get one's fingers underneath. Often, however, this is impossible. In such a case, let me suggest that instead of buying a dozen or a hundred of some so-called safety device, and putting it on every punch press in the shop, you start with one individual press and study the operation carefully in co-operation with the superintendent, foreman, master mechanic, and operator of the machine. Ask yourself the question—why do ac-

**Factory and Warehouse**, South side Passyunk avenue, East of Twenty-eighth street, \$60,000. Architect, private plans. Owner, Atlantic Refining Co., 3144 Passyunk avenue, Philadelphia. Brick and concrete, 4 stories, 56 feet 10 inches x 129 feet 2 inches. Owners will build.

**Store and Service Station**, 1343-47 Brandywine street, \$12,000. Architect, Arthur Rosenstein, 131 South Eighteenth street, Philadelphia. Owner, Evelyn Rosenberg, 4314 Pine street, Philadelphia. Brick, 2 stories, 46x60 feet, steam heat. Owner will build.

**Residences (8)**, Roosevelt Boulevard, East of Summerdale street, \$80,000. Architect, private plans. Owner, John B. Connor, 602 East Indiana avenue, Philadelphia. Brick, 2 and 3 stories, 16x46 feet. Owner will build.

**Store (alts.)**, 1015 Chestnut street, Philadelphia. Architect, Savery & Scheetz, Stephen Girard Building, Philadelphia. Owners, Jacobs Bros., 1015 Chestnut street. Maple floors, carpentry, mill work, metal ceiling, painting, hardware, glazing, plastering. Architects taking bids. R. C. Ballinger, 218 North Thirteenth street; F. A. Havens Co., 845 North Nineteenth street; H. E. Grau Co., 1709 Sansom street; F. E. Wallace, 120 Chancellor street, and F. L. Hoover & Son, 1023 Cherry street, are figuring.

**Garage**, North side of Ludlow, West of Fortieth street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Charles J. Coll, 4021 Powelton avenue, Philadelphia. Brick, 1 story, 50x100 feet, slag roof, cement floors, hot water heating, electric lighting. Architect is ready for bids.

**Grading, Curbing and Sidewalk**, Loney street, from Barnes street to Oxford avenue, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Public Works, Bureau of City Property, 216 City Hall. Owners taking bids due October 22nd at noon.

**Public Garage**, 312-14-16 South Thirteenth street, Philadelphia, \$85,000. Architect, private plans. Owner, John McShain, 1610 North street. Brick and concrete, 2 stories, 250x57½ feet, concrete and slag roof, pine and cement floors, hollow tile, stone foundation, steam heating, electric lighting, plumbing, rolled steel sash, hollow metal skylights, (2) elevators, roof ventilators, gasoline storage system, rolling steel doors. Owner will build.

**Office Building**, 112 North Broad street, Philadelphia. Architect, Wesley Leshner Blithe, 608 Chestnut street, Philadelphia. Owner, Fidelity Mutual Life Ins. Co., W. LeMar Talbot, president, 112 North Broad street, Philadelphia. Reinforced concrete, 8 or 9 stories, 60x85 feet, composition roof, maple and composition floors, concrete foundations (steam heating, electric lighting and plumbing reserved), rolled steel sash, fire doors, (1) ele-

vator, plastering, wire glass, fire tower, ornamental iron work. Plans in progress. Architect will be ready for bids in about ten days.

**Chateau Belmont**, Belmont Plateau, Fairmount Park, Philadelphia. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owner, name withheld. Granite base, reinforced concrete, artificial stone, 2 stories, 100x250 feet, Carey roof, tile and marble floors, electric lighting, marble work (heating reserved), roof ventilators, metal bulks, ornamental iron work, roof ventilators, cafeteria and kitchen equipment. Plans completed. Architect will be ready for bids in the near future.

**Garage**, 406 Westview avenue, Germantown, Philadelphia. Architect, Albert F. Schenck, Real Estate Trust Building, Philadelphia. Owner, Howard C. Story, Fairfax Apartments, Germantown. Stone, 1 story, 19x22 feet, slate roof, cement floors, electric lighting, stone foundations, iron work. Architect taking bids due October 15th at noon. F. Elvidge & Son, 5522 Germantown avenue, are figuring.

**Residences (23)**, South side of Locust street, between Fifty-fourth and Fifty-fifth streets. Architect, E. Allen Wilson, 1218 Chestnut street, Philadelphia. Owner, Samuel Schlossberg, 6146 Pine street, Philadelphia. Brick, 2 stories, 16x50 feet, slag and slate roof, hardwood floors, tile work, combination lighting, garages in basements. Plans completed. Owner is ready for sub-bids.

**Stores and Apartments (alts. and add.)**, Twenty-second and Spring Garden streets. Architects, Robert Pollock and E. G. Rust, 1802 Chestnut street. Owner, Frank J. Costello, on premises. Stone, (3) apartments (4), new fire tower, sheet metal work, oak floors, steam heating, electric lighting, plumbing, tile work, mill work, changing partitions, structural and ornamental iron work. Architects ready for bids.

**Boiler and Engine House and Garage**, Kensington avenue and O street. Architect, Mahlon H. Dickinson, 1705 Chestnut street, Philadelphia. Owner, Max Sarfert, Kensington and Allegheny avenues. Brick, 1 story, 42x120 feet, garage 22x40 feet, slag roof, cement floors, rolled steel sash, iron work, stone foundations (heating, electric lighting and elevators reserved).

**Stores and Dwellings**, 5905-07-09-11 Germantown avenue. Architect, Herman H. Kline, 1612 South Fourth street, Philadelphia. Owner, S. Weiss, care of architect. Brick and stone, 3 stories, slag roof, stone foundations, hot water heating, electric lighting, tile work, flush bulks, iron stairs, metal ceilings, hardwood and parquet floors. Architect will be ready for bids in a week.

**Office Building**, Northwest Corner Broad and Spruce streets, Philadelphia. Architect, Cass Gilbert, 244 Madison avenue, New York City. Owners, Atlantic Refining Co., care of

R. D. Leonard, 3144 Passyunk avenue. Steel, concrete, brick, terra cotta, stone, 20 stories, 80x120 feet, rolled steel sash, steam heating, electric lighting, elevators, tile, marble and terrazzo work. Plans in progress.

**Greenhouse and Service Building**, League Island, Philadelphia. Architect, King Const. Co., North Tonawanda, N. Y. Owners, United States Government, Navy Yard, League Island, Philadelphia. Concrete and frame, 1 story, 25x102 feet, service building 17x27 feet, shingle roof, concrete and pine floors, concrete foundations, steam heating, waterproofing, iron work. Owners have received bids.

**Residence**, Wayne avenue near Lincoln Drive, Germantown. Architect, C. A. Ziegler, 1218 Chestnut street, Philadelphia. Owner, Burton Etherington, 6425 Wayne avenue, Philadelphia. Stone, 2½ stories, 32x70 feet, mottled tile roof, oak floors, hot water heating, electric lighting, tile work. Architect taking bids due October 18th. A. L. Fretz & Son, Heed Building, are figuring.

**Residence**, G street, South Levick street, Philadelphia, \$4,500. Architect, private plans. Owner, L. Vark Miller, 234 North Somerset street, Philadelphia. Frame, 2 stories, 26x30 feet, slag roof, hot water heating. Owner will build.

**Residence and Store (alt. and add.)**, Northeast Corner Fifty-eighth and Florence avenue, \$2,500. Architect, private plans. Owners, Sidel & Feldman, on premises. Brick, 1 story add., 15x35 feet, slag roof, general alterations. Owners will build.

**Garage**, North side Rockland street, West of Sixth street, Philadelphia, \$90,000. Architect, private plans. Owner, Standard Garage Co., Seventh and Rockland streets, Philadelphia. Brick and concrete, 2 stories, 107x200 feet, slag roof, cement floors. Owner will build.

**Garage**, Northeast Corner Sixteenth and Hunting Park avenue, Philadelphia, \$3,000. Architect, private plans. Owner, J. Y. Loux, 3731 York road, Philadelphia. Brick, 1 story, 17x75 feet, cement floors, slag roof. Owner will build.

**Residence (add.)**, Sedgley and Camac streets, Philadelphia, \$4,000. Architect, private plans. Owner, A. Schwinn, on premises. Brick, 1 story add., 17x4 feet, general alterations. Owner will build.

**Tenement House (add. and alt.)**, 1330 North Fifteenth street, \$4,000. Architect, private plans. Owner, Walter Pincus, on premises. Brick, 1 story, 16x17 feet, general alterations. Owner will build.

**Dairy Building**, Lombard, between Second and Third streets, Philadelphia. Architect, Walter Smedley, Stephen Girard Building, Philadelphia. Owners, Abbott Alderney Dairies, Thirty-first and Chestnut streets. Brick, steel and concrete, 3 stories, 104x121 feet, slag roof, cement floors, stone foundations,

## NEW JERSEY Construction News

**Bungalow**, Ventnor, N. J. Architects, Druckemiller & Williams, 1527 Chestnut st., Philadelphia. Owner, name withheld. Hollow tile and plaster, 1½ stories, 40x50 feet, asbestos shingle roof, hardwood floors, electric lighting, plumbing, concrete foundations. Architects taking bids due October 17th. Wilbert Beaumont, Harry Scull, Wesley B. Porch, and A. B. Bowen, all of Atlantic City, N. J., are figuring.

**School**, Phillipsburg, N. J. Architect, E. H. Wenzelberger, Reeder Building. Easton, Pa. Owner, Roman Catholic Church, care of Father Bascio, Phillipsburg, N. J. Brick, 2 stories and basement, 60x80 feet, stone foundations, slate roof, maple floors, steam heat, electric light, structural steel, school equipment. Plans in progress.

**Stores and Apartment House**, Northeast Corner Italian avenue and Boardwalk, Sea Isle City, N. J. Architect, Frank V. Nickels, 4400 Manayunk avenue. Owner, name withheld. Brick and frame, 4 stories, 110x155 feet, (3 stores) 64 suites, concrete swimming pool, slag roof, hardwood floors, timber piling and concrete foundations, hot water heating, electric lighting, tile work, flush bulks, waterproofing, hot showers. Plans in progress.

**Office Building**, 527 Market street, Camden, N. J. Architect, Thomas Stephen, 529 Market street, Camden, N. J. Owners, Smith Austermuhl, on premises. Brick, terra cotta and granite, 2 stories, 56x110 feet, slag roof, maple floors, stone foundations, electric lighting, tile and marble work, hollow metal skylights. Plans in progress.

**Church**, Woodbury Heights, N. J. Archi-

tecs, Fowler & Seaman, Broad Street Bank Building, Trenton, N. J. Owners, St. Peter's P. E. Church, care of E. W. Allen, treasurer, Woodbury Heights, N. J. Brick, 1 story, 25x76 feet, brick foundations, asbestos shingle roof, maple floors, electric lighting. Owners will take general bids.

**Garages (100)**, East Front street, Trenton, N. J. Architect, Wm. Klemann, First National Bank Building, Trenton, N. J. Owner, A. Klenkovostein, North Eighth street, Trenton, N. J. Brick, 1 story, irregular size, slag roof, cement floors, hot water heating, electric lighting, gasoline storage system. Architect taking bids, due as soon as possible. Ernest Klemann, 61 Sweets avenue; S. Wiley, 617 Monmouth street; I Harper Clayton, American Mechanics Building, all of Trenton, N. J., are figuring.

**Garage**, 29 Peridearis street, Trenton, N. J. Architect, Wm. Klemann, First National Bank Building, Trenton, N. J. Owner, Frederick Barlow, on premises. Frame, 1 story, 10x18 feet, concrete foundations, asbestos roof, cement floors, electric lighting. Architect taking bids, due as soon as possible. Ernest Klemann, 61 Sweets avenue; S. Wiley, 617 Monmouth street; I. Harper Clayton, American Mechanics Building, and Edward LaRue, 53 South Hermitage avenue, all of Trenton, N. J., are figuring.

**Club House**, Broadway and Roydon streets, Camden, N. J. Architect, W. W. Sharpley, 1713 Sansom street, Philadelphia. Owners, Ottawa Tribe of Red Men of New Jersey, Camden, N. J. Brick, steel and limestone, 3 stories, 40x145 feet. Plans in progress. Too early for details.

## NEW JERSEY Contracts Awarded

**Home (add.)**, Haddon and Spruce streets, Camden, N. J., \$8,000. Architect, private plans. Owners, Child's Home, on premises. Hollow tile and steel, 2 stories, 40x40 feet, Flint Kote roof, pine floors, electric lighting. Contract awarded to Mockett Const. Co., Camden, N. J.

**Residence**, Ventnor, N. J. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owner, W. J. Montgomery, Ventnor, N. J. Shingle, 2 stories, 52x60 feet, shingle roof, oak floors, vapor heating, electric lighting, tile work. Contract awarded to Charles D. Thompson, Pleasantville, N. J.

**Building**, No. 24, Camden, N. J., \$100,000. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Victor Talking Machine Co., Camden, N. J. Brick, 1 story, 54x478 feet, gypsum roof, concrete floors, stone foundations, rolled steel sash and skylights, iron work, waterproofing. Contract awarded to Irwin & Leighton, 126 North Twelfth street, Philadelphia.

**Bank (alts. and add.)**, Riverton, N. J. Architect, J. Fletcher Street, 129 South Fifth

street, Philadelphia. Owners, Cinnaminson National Bank, Riverton, N. J. General interior and exterior alterations, addition, 18x30 feet, electric lighting, tile and marble work. Contract awarded to George W. Shaner, Palmyra, N. J.

**Lean To**, Delaware avenue and Pearl streets, Camden, N. J., \$7,000. Architect, private plans. Owner, Concrete Steel Co., 42 Broadway, New York City. Timber, corrugated iron roof, 25 feet high, 26 feet wide, 144 feet long. Contract awarded to Lam Building Co., 1001 Wood street, Philadelphia, Pa.

**What Builders Need**

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 3, 1919. Sealed proposals will be opened in this office at 3 P. M., October 17, 1919, for the extension and remodeling of the annex to the Butler Building, at Washington, D. C. Drawings and specifications may be obtained from the custodian at the Butler Building or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 29, 1919. Sealed proposals will be opened in this office at 3 P. M., October 28, 1919, for an additional 200 H. P. Water Tube Boiler at the Bureau of Engraving and Printing, Washington, D. C., in accordance with drawings and specifications, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

## AS THE EDITOR SEES IT

(Continued from Page 632)

cidents happen or why may they happen on this particular press? The answer will be that, for one reason or another, the operator finds it necessary or convenient to put his hand under the plunger—either regularly or occasionally. The way to make the operation safe, then, is to arrange it so that the operator need not and will not put his hand under the plunger. Sometimes this may be done by cutting away a portion of the dies, so that the operator can keep hold of a part of the piece being formed and still not be injured. Often it may be accomplished by introducing an automatic or a foot-operated kick out. This almost always increases production as well as safety. Sometimes it is found practicable and advantageous to interchange the upper and lower dies. Sometimes the method of operation may be altered; I have in mind one case where, in riveting the handle socket onto a kettle, the operator laid the rivets in position after the kettle was in the machine, and sometimes the plunger came down and caught her finger. After a good deal of study the superintendent arranged to have another girl place the rivets in position and hand the kettle to the operator, who then placed it in the press and completed the operation, obviously without danger and obviously with a great saving in time as well. In a great many cases, where the same operation is continued for a long time on one press, it will be found economical to provide some sort of automatic or semi-automatic feed; this also always increases production as well as removing the hazard. Gate guards and two-handed operations are sometimes necessary, but should be used only as a last resort. The methods above are more efficient because they go to the root of the matter and remove the hazard rather than merely guarding it. When you remove the hazard you simplify the operation, and therefore increase production. When you merely guard the hazard you may decrease production.

"What I have said of the punch press is typical of many machines. Safety engineering does not consist in simply building wire mesh guards, nor in buying safety devices which look pretty in a catalog, and putting them on the machine without regard to the wishes, the convenience, or the efficiency of the operator. The real safety engineer will, where necessary, study the operation of a machine until he understands it as well or better than the operator himself—as

well as the foreman, the superintendent, the master mechanic; and then he will apply their brains and his own in working out either a guard, or a change in the machine, or a change in the operation, which will remove the underlying hazard and make the operation intrinsically safe."

\* \* \* \*

**A**PPLYING the safety principles to building construction, Mr. F. J. C. Dresser, the Austin Company, Cleveland, Ohio, representing Associated General Contractors of America, delivered a paper, "Co-operating on Safety."

"It is only in recent years," said Mr. Dresser, "that any discussion whatsoever has been had in reference to the hazards of building construction, and, aside from statistics issued by the several insurance companies, no organized effort has been made by the contractors generally to exchange ideas toward the elimination of accidents. However, the present day finds that several of our larger contracting organizations include a so-called Bureau of Safety, and their results have shown a remarkable reduction in the number of accidents, as well as an immense saving of lost time and money."

"In order to develop a proper safety campaign for the particular job in hand, an analysis is necessary, for the work itself is suggestive of the major portion, or rather kind of possible accidents you will be obliged to combat. I do not mean to say that you can immediately eliminate all accidents, but certainly a study of former accidents on a similar piece of work will help greatly in a reduction of accidents on future work. To just such work, namely, analysis and issuance of instructions, is a safety bureau dedicated."

"Of course, there are and always will be special pieces of work that must be accomplished which are different from any former, but I still maintain that the same fundamentals apply and that an analysis still can be made and preventive measures applied."

"To follow this discussion briefly, and to support the former statement that the work in hand will suggest possible accidents, it is evident that the sewer or grading contractor, for instance, can, by a series of test holes, determine the character of soil he is obliged to excavate, and plan his working methods accordingly. Such procedure will tell him quickly what he must provide in the way of equipment and protective measures, and has the further advantage of

not catching him unawares as far as unforeseen ground conditions are concerned.

"The present day of multiple-story buildings, when radical changes in their construction methods are being employed, finds us facing the source of the greatest number of accidents, as is attested by the high insurance rates. Usually the public comes in for consideration, as far as safety methods are concerned, and, in fact, no other class of structure requires more consistent planning or forethought as regards accident prevention, unless it be in tunnel or subway work as installed in our larger cities. For this work it is plain that proper and substantial equipment must be provided, that possesses a good, safe factor; the sidewalks and streets must be covered; riding loads and in hoists must be forbidden; stairways and ladders must be liberally provided; mechanical safeguards installed; rapidly moving load lines and signal cords boxed or otherwise protected; safety belts and scaffolds provided; and even a man's clothing must receive attention, for many a man has lost a hand by reason of his wearing a gauntlet glove, and others have lost arms and life because of a loose sleeve or glove which dangled into revolving drums, or shafting, or which were caught by a broken strand in a cable.

"Heavy foundation work requires the same care in accident prevention study, both in bridge and in building work.

"Pile driving is another hazardous piece of work, where moving timbers and lines are responsible for many avoidable accidents.

"Wrecking and underpinning are other sources of accidents, and more numerous undoubtedly than should be because they do not receive the attention of an engineer as regards a plan, or, in other words, the average wrecking contractor does not have a staff or an engineer in his service to make calculations before doing work. As a result, defective material is often used and insufficient underpinning installed, causing accidents, of course.

"Heavy rock excavation requires care in handling dynamite, and precaution against flying rock and destruction of property.

"Industrial building work is the source of possibly the greatest variety of accidents, but usually not as disastrous to life and limb as the previously mentioned classes of work.

"An analytical study in the direction of safety, no matter what the class of

work, will certainly produce results if undertaken with the same spirit that a construction engineer plans his layout and schedule.

### EMPLOYEES.

"In a large measure the application of safety methods depends on the employee. The more intelligent, the less liable is he to accident. In this respect, the iron workers or steel erector is possibly the most versatile in that he thinks of the possibilities of things happening in connection with the work in hand, and is not so easily caught unawares. The brick mason and carpenter are usually on more substantial footing, and, inasmuch as their work is usually more regular, do not have occasion to give 'possible happenings' much thought. No other mechanic requires good judgment more than the hoisting engineer, especially be he engaged on multiple-story building work or heavy bridge construction. The common laborer, however, requires more watching than the trade mechanics, and in this respect much depends on the intelligence of the foreman who directs his movements. All workmen, however, can be schooled in safety methods, as has been demonstrated by leading contracting companies who have safety bureaus. For instance, Fred T. Ley and Company began this work in 1915, and their reduction in accident rate per 1,000 employees for 1916 was 25 per cent., and in 1917 was 55 per cent., which is indeed encouraging.

### CHARACTER OF ACCIDENTS.

"Our records, from a recent piece of construction, which involved steel erection, heavy concrete, brick work, and grading, also track work, show, from a total of 242 accidents, that: 73 employees sustained bruised fingers from handling material, 37 employees sustained punctured feet from nails, 11 employees sustained cuts on head from falling material, 7 employees sustained sprained ankles, slipping and misstepping, 7 employees sustained cuts on hands, and the balance were minor injuries. This work comprised the erection of a large engine terminal, and this record conforms in the average to the class of accidents which we must safeguard against in the course of our regular industrial building construction.

"I find in comparison with figures as derived by other concerns, that the accidents in the main are similar in character, but the percentages vary, due undoubtedly to the character of the work in hand.

"The greatest number of accidents,

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

we find, come during the handling of material, and are confined to hand injuries; second in number come injuries to feet from protruding nails; third, employees falling, by reason of misstepping or stumbling over strewn material, causing sprained or broken ankles, broken arms or legs; fourth, falling material, causing cuts about the body and broken limbs. These are the four main causes as we find them, and it is natural, therefore, that preventive measures be provided in the order named.

"I believe it goes without question that a job properly planned, and scheduled whereby one phase of the work closely follows the other, where material is received and handled in the same order and where orderliness prevails throughout, is rewarded by the least number of accidents.

"Receiving and storing of material is a study in itself, for naturally the best position must be selected for hoists, and also for storage. One should be near the other to avoid rehandling and increased costs, and minimum handling also reduces the possibility of accidents, as is plain. But often they are far apart, causing long runways to be built and arranged, in and out, around or through a building, as the case may be, creating a state of disorder and interfering with the other divisions of the work. The ideal, of course, is one where, for instance, structural steel can be placed from car to position, eliminating rehandling in field; and on large operations where space is available, this can often be done with steel as well as other material, if hoists and material tracks or roads are given some attention as to layout and position before work is started in the field. The main object is to eliminate distance, for work is really distance versus resistance, as the definition goes, and the further application of all possible mechanical means to handle material from cars to wagons to position is another factor which results in a great reduction of accidents.

"Our second consideration being given to nails, we find that orderliness in handling of lumber containing protruding nails, eliminates foot punctures by the score. Plank or forms of this character should be stacked with nails down and not be allowed to be strewn all over the job. In order to reuse the plank or board, the carpenter must drive the nails back, and their removal as soon as the plank or brace is taken down is undoubtedly the best practice. As regards concrete form lumber that has been stripped, if it has no further use in the

building as fabricated, it should be stacked and nails removed by the cleaning gang, if there is one, as soon as possible to make it available for other use, for certainly the reuse of lumber these days is economy, and a carpenter usually will take a new piece rather than stop to remove nails. In a multiple-story concrete building, forms are usually stripped and immediately placed in position for the next floor, and the same applies to braces, so that the immediate removal or driving back of nails is necessary and foot punctures are made less possible than on the ordinary timber or house job. Elimination of strewn lumber will reduce nail accidents, and its reclamation should be taken in hand at once in order to make it fit for reuse, which in itself will cause a saving in the final lumber bill.

"To avoid employees falling, railings should be erected on staging and scaffolds; runways of sufficient width provided; and material generally should not be strewn promiscuously about the job. Openings should be covered or railed and good stable ladders built. Climbing up or down hoist towers should be forbidden, and all moving lines boxed so as to avoid tripping. Working aisles should be kept clear of waste and surplus material.

"To avoid falling material, storage of the same should be confined to the interior aisles, and scaffolds provided with a sideboard to prevent brick especially from going over the edge.

"In discharging debris, closed-in chutes should be installed, wheeling runways to be of sufficient width and overloading of wheelbarrows forbidden, especially when brick are being moved.

"Naturally, the safety movement must begin with the management itself, and if contractors generally will review the results obtained by those contractors who maintain Safety Bureaus, they will readily see that it is a paying branch of the organization. The gratifying results obtained by Fred T. Ley and Company, of which Mr. L. D. Woedtke is Director of Safety, have already been mentioned. Inasmuch as the work covers a period of only three years, they are indicative of the immense amount of good work that can be done in accident prevention in general contracting, as propaganda of this kind is really in its infancy in this field.

"The next step for an organization to undertake is the addition of a Safety Bureau, under whose direction the work is carried on. The first consideration must be given to the field organization

itself, meaning the engineers, superintendents, and, in fact, the entire rank and file, for co-operation must exist, and foremen generally must see that the safety rules are observed.

"As a further matter of co-operation, the construction department should turn over to the safety man a complete schedule of the job in hand, showing the progress expected, this being the first step. Second, a set of safety rules should be issued applying to the work or particular job in hand, which are set up after due analysis of the conditions which are to be met. The third is, of course, the enforcement and application of these safety rules.

"First of all, any job employing 125 men or more, dependent, of course, on character of the work and location, should have a first aid attendant and small field hospital. We find it pays decidedly by eliminating lost time.

"Second, the job organization should appreciate thoroughly the meaning of this safety work and they will in the end discover that lower unit costs will result from the observance of the safety rules.

"To educate the workmen themselves can be done in different ways, and, first of all, I believe, he should be taught to observe safety rules provided as a precaution against the first or possibly the second classifications, which are most liable to happen. His education in this respect should be gradual or progressive as the work goes on, and his foreman, of course, should see that the rules are observed.

"Descriptive photographs are an immense help in avoiding accidents and educational work, and should be in keeping with the class of work in hand.

"Periodical bulletins help greatly, as do also signs, which should be of such size and meaning as can be understood by all. A sign that can be read only a few feet distant is not of much use; it should be readable at a considerable distance—the farther the better.

"Another idea is to have progressive signs, or those which move forward with the work, cautioning what in particular may result from the work in hand at that time. These signs should be right on the job and not posted on the office door, which may be a mile away from the job.

"These are, of course, just the means by which the idea can be conveyed, and various methods can be adopted as results may suggest; the same to be chosen by the Safety Director himself. In addition, safety meetings should be held on

the job by the foremen and a plan of action or procedure decided upon before particular pieces of work are undertaken, also work covered should be reviewed, ideas exchanged, and the work encouraged in every way. In this way, the best methods can be secured.

"Needless to say, the equipment for the particular job in hand should receive the same careful attention, first to be assured that it possesses the necessary safety factors to handle the work generally, and that it is in good repair at all times, and receives the necessary periodical inspection while on the work as well.

"On all our work, for instance, we carry boiler insurance; the boilers receive periodical inspection by the insurance company, and, of course, must conform to the State laws.

"Around the plant generally, guards should be built which will eliminate the possibility of employees coming in contact with the moving parts and lines, and the same consideration must be given to hoists and hoist lines. To operate plants efficiently requires good mechanics, and a contractor, who maintains a staff of experienced operators in connection with his organization has done much toward the application of safe methods, for the accident, as a rule, happens to the green man, no matter whether he be mechanic, laborer, or machine operator, and it is necessary to observe such men very carefully, until such time as some experience has been gained.

"Safety rules further will establish under what conditions a machine is to be operated and how, and will also establish signal codes to be observed, for

very often the operator cannot see the other end of the line or the top of the hoist, as the case may be.

"At any rate, common sense application tells us that above all else you must have experienced machine operators, and none other should be permitted to be employed, yet many times you will find some man out of the gang running a machine, the principles of which are entirely foreign to his understanding.

"The whole work; however, as regards both employees and equipment is to be reviewed and inspected by the Safety Engineer, who will suggest precautions and safety rules that are to go hand in hand with the working methods decided upon for the handling of the job. This is further beneficial inasmuch as a man from general headquarters sees many things that a man on the job does not deem important.

"Generally speaking, this subject is one that is becoming more important each year, and the increasing obligation to co-operate with safety is plain, considering the fact that in 1917, in our United States, 300,000 men were disabled and 3,000,000 minor accidents occurred in our industrial army.

"It means work and a general adoption of the policy of accident prevention wherever man is employed in industrial work.

"To this end, it is gratifying that the contractors generally are becoming more interested, for certainly it is a work that is worthy of the fullest recognition, and we hope to record with the National Safety Council next year a remarkable improvement in our work."

the utterances of a few of their more radical spokesmen, it has come as a surprise to learn that the failure of the Bolshevik to gain a foothold here has been due largely to the American workingman himself, who heard the Bolsheviks' arguments only to laugh them aside.

The average laborer in this country, even the unskilled laborer, is not an ignorant person. He knows that he is prosperous, and that he will continue to be prosperous if he continues to watch out for his own welfare as assiduously as he has done in the past and does not become too unreasonable in his demands; he knows that, as soon as the cost of living advances his wages will advance, and that, whatever the conditions of life may be for others, he will always be able to earn a living wage. Knowing that his trades unions and his special representatives in Congress and elsewhere are capable of looking out for his welfare in the future as in the past, the American workingman is well satisfied to rely upon the machinery he has at hand without experimenting with the strange contrivances of a disturbed Europe.

Leaders of industry who are disturbed by the high labor cost of their products and who are hoping to see the cost of labor decline in the near future are due to be disappointed, for the relative cost of labor will remain the same a year from today and the likelihood is that the actual cost will be higher rather than lower. Those industrial leaders who, in addition to hoping for such a decline in the wage scale, are intentionally or unintentionally helping to bring it about by deferring necessary business activities such as building operations are, as a matter of fact, unwittingly helping, instead of checking, a tendency which would give the Bolshevik the opportunity he seeks in America—they are threatening the sources of that prosperity which is today making the American workingman one of the strongest bulwarks against the Bolshevik and are undermining the workingman's confidence in the good sense and far-sightedness of his employer.

The danger that such a situation as this may be created is not, however, an imminent danger, because the industrial leaders who take this short-sighted view are growing fewer every day. The number of contracts for new construction operations that have been let in the past few months and are due to be let in the next few weeks show that many business men are awake to the need of going full speed ahead instead of waiting for cost declines that will not come. The slower investors will be forced to trail behind their more progressive leaders and in the end will pay as high, or perhaps higher, for their postponed work, in addition to losing time and profit that a

## LABOR AND PRODUCTION

By NOBLE FOSTER HOGGSON, President,  
Hoggson Brothers, Builders.

The chief reason Bolshevism has failed and will continue to fail to make any headway in this country is that the American workingman, in spite of the high cost of living and other troubles, real or imagined, is the most prosperous laborer in the world. In fact, he is the representative of the most prosperous class in this country if his prosperity be estimated on a scientific basis of comparative values rather than money values, for he has made greater strides toward equalizing income and outgo than any other person in the social scale, and he alone has been able to demand and get an increase in income as soon as living costs have risen. Business men who would postpone the resumption of industrial activities at full pressure while wait-

ing for the wage level and other cost levels to fall, hoping by such action to force a decline in the cost of labor, are unknowingly attempting to blast holes in the dykes that are protecting our nation from all the horrors of blood-soaked Russia.

The newspapers have told us of the concerted efforts that have been made for a year or more to introduce Bolshevik doctrines and Bolshevik methods of misgovernment in this country; but the same men who were terrified six months ago by the outlook for the immediate future are agreed today that the radical doctrines of Russian extremists cannot be transplanted successfully to American soil. To some persons who know the workingmen of this country only through

## *5,000 Salesmen Are at Your Command, Ready to Bring You Business*

A salesforce 5,000 strong, full of pepper, punch and personality awaits your word.

This sales organization can successfully carry your message to the architects, contractors and builders of Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

***“Builders’ Guide” is that 5,000 strong Sales Organization.***

Established for 34 years, the success of the paper has been built by our ability to produce results for you who sell.

“BUILDERS’ GUIDE” can hitch a sales service to your organization that will put new life and fire into the selling points of your line by presenting them from new angles weekly, by giving your ad the individuality that will make it stand out and command attention.

“BUILDERS’ GUIDE’S” 5,000 salesmen can cooperate with you.

Write for information about our plan.

**Perry Building - Philadelphia**

little foresight would have saved them.

A lesson learned from the war itself points the way out of the maze of uncertainty and unrest which has followed the sudden transition from war to peace. The employer, the merchant, the industrial producer, all are confident of the future, yet few dare start ahead with firm tread. The reason for the uncertainty is lack of confidence. The broad confidence which every man had in his neighbor while the war was on dwindled to a pin-point when the war emergency disappeared.

Yet here lies the opportunity for making the industrial life of the nation a better and more stable element in its welfare. If each class that is engaged in the task of restoring the country's prosperity would help revive the spirit of trust, confidence and co-operation manifested during the war, believing that their better natures should stand revealed in peace times as well as during the stress of war, a happy start would be gained toward the reconstruction of America into a better, happier, more prosperous place in which to live. The trend toward such a movement for the substitution of co-operation for competition has already shown itself, and it promises to bring business and industrial relations to a higher level than has ever been reached before.

Without close co-operation the war would never have been won, and without continued co-operation along both ideal and practical planes it will never be possible for this country to meet successfully the vital issues created by the complex reconstruction problems of the day and the sudden change from abnormal war conditions to subnormal peace conditions. But no amount of co-operation will be of much avail if it consists merely of a passive laying aside of jealousies and antagonisms. The immediate, urgent need is for production—active production on a scale such as America has never seen.

\* \* \*

#### PROFIT SHARING.

1. Profit sharing is by no means a panacea for industrial troubles.
2. Profit sharing must not be considered as taking the place of a fair basic wage.
3. Profit sharing has not generally been demanded by labor.
4. Profit sharing plans have been most successful when applied only to executives, from the rank of foreman up—for the following reasons:

(a) The individual workman does not exercise a direct influence on profits, although he may do so on production; the foreman and superinten-

dents, and especially the higher executives, can influence profits materially.

(b) The efficiency of the worker can be better rewarded through some form of piece-work, premium, or bonus. The efficiency of the higher executives, on the other hand, cannot be measured except in terms of the profits of the company.

(c) Profits depend very largely on business chances, which may overbalance any rise or fall in the efficiency of the working force. The executives recognize this and will not be dissatisfied if, in a poor business year, they find there are no profits to be shared. The workman, on the other hand, does not realize this; if he receives a generous share of profits one year, and the next year his share is smaller, he is apt to think the management is holding something back on him.

6. Some authorities state that for the purpose of stabilizing the working force, and making the workman feel that he is a partner in the business, a plan for giving workmen an opportunity to purchase stock is better than a profit sharing plan.

(From an address by Prof. Ralph E. Heilman, Dean, School of Commerce, Northwestern University, Chicago, at Convention of National Association of Employment Managers, Cleveland, 1919.)

\* \* \*

#### ADJUST PRICE TO WAGE SCALE

*Changing Labor Rates Suggest Need for Adjustment of Contract Price.*

The present unstable condition of the labor market means that unusual hazards must be met in bidding on new work. In an effort to reduce this element of chance, the Northwestern Association of General Contractors has made the very interesting suggestion that all contractors, where legal limitations will permit, base their prices on a sliding scale for labor, and embody in their bids on lump sum work a paragraph similar to that given below.

#### PROTECTS OWNER AS WELL AS CONTRACTOR.

The Northwestern Association feels that such a provision inserted in contracts should meet with the approval of architects, engineers, and owners as well as of contractors. It is eminently fair, and protects the owner in case of any decline in wages. Further, it eliminates the necessity of the contractor's protecting himself against possible advances in wages by bidding high, and therefore should result in lowering the cost of the work to the owner since the actual increases, if any, would seldom equal those for which allowance properly should be made if the contractor must bear the

burden without additional compensation. ADJUSTMENT TO BE BASED OF AVERAGE

#### WAGE.

"This price is based on an average rate of wages of—cents per hour, the average rate per hour to be the rate obtained by dividing the total monthly payroll of all men engaged upon the work by the total number of hours shown on such roll. Monthly adjustments, based upon the average rate per hour, are to be made in the following manner:

"The Contractor will present to the Owner a statement showing the total amount of his payroll for any calendar month, together with the total number of hours on this roll, and the average rate per hour. When this average rate exceeds—cents per hour, the Contractor is to receive from the Owner the difference between the actual average rate paid, and —cents per hour, multiplied by the number of hours shown on the payroll. When the actual rate paid is less than —cents per hour, the Contractor is to have deducted from his monthly estimate an amount equal to the difference between the actual average rate per hour and —cents, multiplied by the number of hours shown on the payroll." —Associated General Contractors of America—Members' News Letter.

\* \* \*

A prominent Safety Engineer was recently taken on a tour of inspection through one of the large automobile plants where the industrial railroad crosses several of the city streets. He noticed that one of the old veterans of the plant was employed to guard one of these crossings and when the electric bell rang, indicating the approach of a train, the guard quickly hobbled out to the center of the street and, cocking his head on one side, said in a low, feeble voice, "Look out for the cars."

This engineer later remarked that here, as in many other places where he had been, it was a question whether one whole man could be made out of all the watchmen in the plant.

If we are to save lives and limbs, if we are really to prevent accidents, our warning signs should be plain and effective; the gongs, whistles, and bells should be clear and distinct and our watchmen should be active, alert, honest-to-goodness men. A watchman's job is most important and we need not apologize for it. Would it not be a good idea to check up on our warning signs, signals and watchmen?

The "Builders' Guide" is in its thirty-third year of continuous publication.

CARTER PAVING COMPANY

639-41 N. 18th St., Philadelphia, Pa.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

PHILADELPHIA, PA.

## SHEATHING and METAL LATH

erected at one operation. Time and Labor Saver

All the steel with the exception of the binder ribbons is on the face of the felt, consequently every ounce of the strength of the metal is brought into play—equal reinforcing being provided in every direction, thus impartially distributing the stress over the entire area.

### Tends to Prevent Cracking of Plaster

The strands run diagonally, slanting in both directions. Hence, no matter in what direction a crack may start to form, a strand of steel will be found lying across its path to resist the tendency.

### Insures a Perfect Bond—Saves Plaster

## As The Editor Sees It

**G**REAT interest has centered in the Fire Prevention Day observance held recently throughout the country. Certainly any movement directed toward conserving the resources of the country and the lessening of loss of life is worthy of universal support. Mr. F. W. Fitzpatrick, father of the Fire Prevention Movement in this country, and former executive officer of the International Society of Building Inspectors said recently:

"Our building-departments exercise control over new construction. They say what we can and cannot do, though we have to make those rules and regulations less drastic than they should be for the dear public will take its civic medicine only in homeopathic doses. We label our automobiles for safety-sake, the Health Department labels our homes for 'scarlet-fever,' 'diphtheria,' etc., when occasion demands, all for safety-sake. So should we label our buildings. The Building Department should have that function to perform. Every building housing twenty or more people, all public and semi-public structures, should be rigidly inspected, and then the official label affixed in a prominent place, the main doorway preferably. Labelled 'Fire Resisting,' 'Ordinary Construction' and 'Dangerous.'"

"Today we see old traps of hotels with signs a story high proclaiming them 'Absolutely Fire-proof'; the effrontery of decrepit-building owners is amazing. All

that would be stopped and Mr. Owner of a highly inflammable building would have 'Dangerous' officially and conspicuously affixed to his door. How long could he beguile people into renting or occupying that building? What a scramble there would be to make the old traps less 'Dangerous' or tear them down and build real buildings! Such a rule would make for the honesty of its own enforcement too, for what Building Commissioner or Inspector would take chances in favoring a friend by wrongly labeling a building? He wouldn't last long if one of his 'Fire-Resisting' buildings burned. It's the most drastic but most effective improvement yet planned for our Fire Prevention Movement."

That results are being accomplished is demonstrated by a marked decrease in the total fire losses in the United States and Canada as shown by the following table, giving the total losses to property by fire during the months of June, July, August and September, 1919. As is usual, more than half the total loss has occurred in congested and mercantile districts which are largely left during the night without sufficient watchman or fire alarm service. As will be noted, dwellings comprise surprisingly small percentage, especially in view of the fact that we are frequently confronted with forceful statements by insurance men that wooden dwellings and shingle roofs are the greatest menace to life and property.

What we most need, according to the Architectural and Building Code Service of the National Lumber Manufacturers Association, are intelligent men at the head of municipal fire prevention bureaus with broad enough vision to see the necessity for proper building ordinances regulating construction and fire prevention in our congested business districts, where more than half of our annual fire loss occurs.

The insurance men, keen to ride the

"combustible roof" and not the "defective flue"—the real cause of 75 per cent. of roof fires, are still harping on the huge loss by conflagration in 1916, but do not state that conflagrations in 1918 and 1919 were practically nil. Quite as many conflagrations have burned "fire-proof" cities as any other type of construction—what is needed is an intensive campaign against the "defective flue" and the careless individual. If laws are made to punish those responsible for *starting* fires, the *spread* of fire will be a negligible item.

With the opening of school this fall the shortage of school buildings is everywhere emphasized, for comparatively few of the several hundred thousand new school houses which the Department of Labor announced in the spring as necessary, have been built.

The one-story school house, no matter of what material built, has disposed forever of life peril, with reference to the terrible menace of fire; and when built of wood, it cannot be excelled for beauty, low cost and elasticity.

This type of school house has many advantages over other kinds aside from the greatest one of freedom from fire peril. There are no stairs to climb, no room wasted in halls and stairs, no sweeping of dust from one floor to another, no overhead noise; quicker exits and better light and ventilation are obtainable. What is true in general of any one-story school house is truer of wood construction in that when changes or additions are desirable, they can be easily made without destroying the artistic effect of the structure.

The bulk of American schools are of wood construction and undoubtedly will continue to be of such, 6000 small schools in the state of Nebraska alone in 1917 giving some idea of the tremendous volume of rural school building in America. An idea which is widely applied in a standard type of industrial building deserves consideration for one-story school buildings. This is the slow burning or mill construction floor design, in which the interior frame and floors are of timber arranged in heavy solid masses and smooth flat surfaces so as to expose the least number of corners, and to avoid concealed spaces which may not be readily reached in case of fire. This type of construction will not only mean freedom from life peril, which the one-story structure insures by its very nature, but it will reduce property damage to a minimum while at the same time providing a substantial structure at a low cost, with beauty and adaptability to change or addition. If such a building is partially destroyed, there is much material salvaged, far more than from crumbling brick or pulverized concrete.

It is safe to predict that the one-story school is the school of the future and that the several-storied fire traps of the past are disappearing.

\* \* \*

Governor Sproul named Pennsylvania's first art commission, with Clarence C. Zantzinger, architect, Philadelphia, as president; Harvey M. Watts, Philadelphia, secretary; John A. Dempwolf, architect, York; Nicola D'Ascenzo, Philadelphia; Benno Janssen, Pittsburgh.

The commission was named pursuant to an act of 1919, which provides that all state, municipal and other memorials, monuments and markers must be approved by the commission before they may be accepted.

Architects appointed to serve on the State Board of Examiners of architects are: Edward Stotz, Pittsburgh; Clarence Wilson Brazer, Chester; M. I. Kast, Harrisburg; John Hall Rankin, Philadelphia; Edward H. Davis, Scranton.

## OWNER PROTECTION IN BUILDING CONSTRUCTION

### HOW COSTS ARE KEPT UNDER THE COST-PLUS-FIXED-FEE CONTRACT

#### Books Kept at Job Office—Open for Owners and Architects Inspection

By F. A. WELLS, Vice President and Treasurer  
Wells Brothers Construction Co., Chicago

No contractor who values his capital can afford to do without adequate cost records, both as a check on the job in progress and as a basis for future estimating. Yet the simpler that system of accounting, the better, and any refinements further than those necessary to give the actual required data are a waste of time and money. Some contractors keep their books under their hats or in their left-hand pocket of their coats, where all invoices go preparatory to paying. At the opposite extreme are firms who maintain a complicated system of accounts, both at the job and at the home office. Accounting methods sufficient for the lump-sum contract may be insufficient for the cost-plus-fixed-fee contract, under which the owner and architect must have access to the accounts at all times.

We have found the following system to be adequate for cost-plus jobs and with only a few changes this is the system put into effect on such typical work as the four warehouses we have built for Montgomery Ward & Co., at Chicago and Kansas City, the Butler Brothers' Chicago Mail Order Warehouse, Rand McNally's & Company's Chicago Publishing House and other similar work in this country and Canada.

Occasionally we have found an owner who prefers to be given such data as will permit his own accountants to keep a complete system of books. Generally, however, our accounts, kept on the job and open at all times for inspection, are considered sufficient, in view of the detail statements we render to the owner every two weeks—bearing the approval of the owner's representative, who is designated for that purpose. We urge owners to have their auditors frequently

make examinations of accounts for their own satisfaction.

The system we are now using is briefly the keeping of a—

1. Cashbook, Voucher Record, and Ledger, combined.
2. Invoice and Payroll Register, combined.
3. Detail Cost Record.
4. Accounts Payable Record (Vendors accounts).

1. The *Cashbook, Voucher Record and Ledger* is used for the recording of all cash received, cash disbursed by vouchers and all journal entries.

2. The *Invoice and Payroll Register* is used for the recording of all invoices and payrolls. The invoices and payrolls are numbered consecutively. The Register has columns for date, invoice number, Vendor's name, total amounts, both Debit and Credit and individual columns for the 20 main accounts used in distribution of costs. The Register represents an absolute detail control of all approved charges to the job as only audited and approved items are given a register number or entered. The payrolls are given register numbers and approved the same as invoices. The office copies of all invoices are filed in numerical order in an ordinary letter file drawer, and bound in numerical order, in lots of 50 to 100, using an ordinary heavy file folder for cover, clamping the invoice to the folder.

3. The *Detail Cost Record* is used for the recording in detail the distribution of costs among the main accounts as shown on Invoice Register.

4. The *Accounts Payable (or Vendors Accounts) Record* is used for the

**HERMAN E. WENDELL**  
Registered Architect

P. O. Box 156.

Ocean City, N. J., October 14, 1919.

Building News,

Philadelphia, Pa.

Dear Sirs:

Hafleigh & Co., H. E. Wendell, manager, have purchased the mill property at Sixth street, West avenue to Haven avenue, Ocean City, N. J., and will manufacture all mill-work, sash, furniture and special built-in

features for the company's various hotel, apartment, garage and housing projects in Ocean City. In addition, we will manufacture cement brick and will deal in building supplies of every description. We desire to get in touch with wholesalers and jobbers handling anything that goes into extensive construction work, including all kinds of lumber, Southern pine and cypress, bass, white pine, hardwoods, California red wood, the various roofings, floorings, rough and finished hardware, glass, metal (flat and ornamental), steel and structural iron, concrete, lime, mastic, brick and mortar, colors, restaurant, dining and laundry equipment, public garage equipment, mill machinery and supplies. We

would especially like to get in touch with dealers in apple, pear and cherry lumber or logs. We desire to lay in a stock of the various articles named at the very earliest moment, and would appreciate such assistance as you may render in the matter.

We will sub-let the following items: Electrical work, plumbing, painting and plastering.

Thanking you for past courtesies, I am,

Respectfully,

H. E. WENDELL, Manager.

Hafleigh & Co.

Plant No. 4, Ocean City, N. J.

Plans will be completed November 15, 1919.

**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

## There is a Difference

between installing a water supply  
system and just digging holes in  
the ground.

It doesn't pay to have an expensive  
Artesian system put in by an inex-  
perienced person. His lack of  
technical knowledge and paucity of  
experience usually means a water  
supply system that will sooner or  
later have to be overhauled—and  
probably at a higher figure than  
the cost of the right system would  
have been in the first place.

We are Specialists in

(Continued from Page 652.)

recording of all invoices from Vendors. After the invoices have been entered in the Invoice Register and Detail Cost Record Book, they are entered as a Credit to Vendor in Accounts Payable. Each Vendor has a separate page or sheet. After entry is made, it is placed in file under Vendor's name until ready for payment. When payment is made same is vouchered and charged to accounts payable (Vendors acct.) and cash credited.

OFFICE ROUTINE OF PURCHASE ORDER,  
INVOICES AND VOUCHER.

*Issuance of Purchase Order—In Quadruplicate.*

The original of order is sent to Vendor, the duplicate is filed numerically (which forms order Register), triplicate is filed in Open Order file—(Vendor's Name Order), quadruplicate—which forms material receipt or tally sheet) is filed by the office material clerk awaiting receipt of material.

*Receipt of Material.*

Upon receipt of materials, the office material clerk checks and signs the material receipt portion of the order and file completely with supporting delivery tickets, etc., awaiting invoices.

*Checking and Auditing Invoices.*

Invoice upon receipt is checked against material receipt or tally sheet for receipt of material. Extensions, prices and footings are checked and certified. Cost distribution is checked and entered. Invoice is then audited for discount and cost distribution and certified. Invoice then passes to the superintendent for his approval and the approval of the owner's representative.

*Entry of Approval Invoices in Invoice Register and Vendor's acct.*

Upon return of approved invoice from the superintendent, the bookkeeper gives the Invoice numerical register number and enters in the Invoice Register. Only fully approved invoices are given register number. Invoice is then posted to the credit of the Vendor in Accounts Payable account and a charge to the Detail Cost Record.

*Journalizing Accumulated totals of Invoices Register to Ledger.*

Accumulated totals in the Invoice Register are journalized in the Ledger (which is also the voucher record) at daily, weekly or semi-monthly periods as is found practical.

*Voucher Check.*

We have found the voucher check sys-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

tem to be the most convenient. The voucher is made in quadruplicate at the construction office on the job and the approval of the owner's representative is often indicated on all copies of the voucher. The check, or original voucher goes to the Vendor, the duplicate to our general office for our records, the triplicate is kept as the job record and the quadruplicate is the "Owner's Copy" which is forwarded to the Vendor with the original to be receipted by him and returned. At intervals we furnish the owner with statement showing vouchers paid and receipted vouchers attached.

Since the major purpose of cost accounting is to give an adequate basis for future estimating, it is important that so far as practicable the form of cost accounting shall follow the form of estimate. This is not practicable to the last subdivision of each of our general accounts, but sufficient to permit intelligent use of all cost figures. With such figures it is possible to compare not only final costs, but costs at any stage of the job, with the original estimated cost for that portion of the contract. We frequently divide our estimate by floors, in the case of a many-storied building, in order to have a check upon quantities and upon expenditure at several stages of the work.

#### DISTRIBUTION OF ACCOUNTS.

We use the decimal system of classification of accounts. The classifications number 100 to 600 inclusive, and 900 are for our general books, which embrace the assets and liabilities, revenues and income accounts—we will omit these in our discussion of construction cost accounting in connection with cost-plus and fixed-fee contracts.

The general distribution is under the following headings:—

700 and 800 Construction Costs (Summary of General Headings):—

- 710 Excavation.
- 720 Caissons.
- 730 Footings
- 740 Trench and Wall.
- 750 Concrete and Fireproofing.
- 760 Masonry.
- 770 Carpentry.
- 780
- 790
- 800 Plant Expense.
- 810 Field Overhead.
- 820 Extra Work.
- 830 Subcontracts.
- 840 (Subcontract) Extra Work.
- 850
- 860
- 870 Repair Contracts.
- 880

890 Company Expense (not chargeable to owner).

The sub-divisions of headings 710-790 are between the items labor (1), material (2), and liability insurance (3). Thus, labor in excavation would be 711, material in excavation 712, and liability insurance in excavation 713.

A further division of the various kinds of labor and materials is made. The following classifications illustrate this point:

Labor—711:

- 711.01 Digging (General).
- 711.02 Digging (Sub-basement).
- 711.03 Sheeting and shoring banks.
- 711.04 Shoring adjacent building.

Material—712:

- 712.01 Lumber.
- 712.02 Underpinning adjacent building.

- 712.03 Rings (steel).

- 712.04 Cement.

Liability Insurance—713.

For convenience we have listed the charges of labor and material in the order they usually appear in building construction costs:

Labor—

- .01 Digging (general).
- .02 Digging (sub-basement).
- .03 Sheeting and Bracing Banks.
- .04 Shoring Adjacent Buildings.
- .05 Underpinning Adjacent Buildings.
- .06 Pumping.
- .07 Back-filling and Grading.
- .08 Cutting Old Footings.
- .09
- .10 Placing Lagging and Rings.
- .11 Ventilating.
- .12 Mixing and Placing Concrete.
- .13 Build Forms (General).
- .14 Build Forms (Exterior Colmns).
- .15 Build Forms (Interior Columns).
- .16 Build Forms (Spandrels).
- .23 Lay Brick.
- .26 Bend Steel.
- .35 Set Cut Stone.
- .44 Fit and Hang Doors.
- .56 Unload and Handle Material, etc.
- .60 Clean up Rubbish.

Add as many new accounts as are needed.

Material—

- .01 Lumber.
- .02 Underpinning Adjacent Building.
- .03 Rings (Steel).
- .04 Cement.
- .05 Sand.
- .06 Stone.
- .07 Brick.
- .08 Wall Tie and Inserts.
- .09 Steel (Structural).
- .10 Steel (Reinforcing).
- .11 Nails and Wire.
- .12 Clamps, Purchased or Rented.

.13 Tile.

.14 Protection (Lumber, etc.).

.15 Terra Cotta.

.16 Granite.

.25 Frames and Sash.

.30 Interior Trim.

.35 Coping.

Should charges be made in connection with concrete and fireproofing under Subdivision 750, they would follow the same order as in excavation:

751.12 (Labor)—Mixing and Placing Concrete.

752.04 (Material)—Cement.

753—Liability Insurance.

Or, Carpentry—Subdivision 770:

771.44 (Labor)—Fit and Hang Doors.

722.25 (Material)—Frames and Sash.

733 Liability Insurance.

CLASSIFICATION OF PLANT EXPENSE.

Subdivision 800 covers plant expense and conforms with the subclassification of the 700 accounts as much as practicable.

The following are the headings under 800:

- 801 Excavation.
- 802 Caissons.
- 803 Footings.
- 804 Sawmill.
- 805 Concrete and Fireproofing.
- 806 Masonry.
- 807
- 808
- 809 General (items charged to general equipment).

A further typical subdivision of the accounts under this heading is:

- 801 Excavation.
- 801.1 Transportation (of Equipment Plant).
- 801.2 Erectiton of Equipment.
- 801.21 Labor.
- 801.22 Material.
- 801.3 Equipment on Charge and Credit Basis.
- 801.31 Labor.
- 801.32 Material.
- 801.4 Rental of Equipment.
- 801.5 Fuel, Lubricants and Power.
- 801.6 Repairs.
- 801.7

Should charges to Plant in connection with concrete and fireproofing be made, they would be charged as 805 with divisions shown above.

FIELD OVERHEAD.

811 Salaries, General Labor and Expense—

- 811.1 Supt. and Engineers.
- 811.2 Office Employes.
- 811.3 Materialmen and Timekeepers.
- 811.4 Laying Out Building.
- 811.5 Watchman.
- 811.6 Waterboys.
- 811.7 Toolmen.

- 811.8 Lia. Ins. Supt. and Watchman.
- 811.9 Trav. Exp. Supt. Engr. & Office Men.
- 812 *Engineering Expense*—
  - 812.1 Plans, Detail and Eng. Supplies.
  - 812.2 Photographs.
  - 812.3 Engineering Service.
  - 812.4 Architects' Fees.
  - 812.5
  - 812.6
  - 812.7
  - 812.8
  - 812.9
- 813 *Office Expense*—
  - 813.1 Rent, Light and Heat.
  - 813.2 Stationery and Printing.
  - 813.3 Telephone.
  - 813.4 Telegraph.
  - 813.5 Postage and Expressage.
  - 813.6 Rent on Adding Machine and Typewriters.
  - 813.7 Furniture.
  - 813.8
  - 813.9 Misc. Off. Expense, Towels, etc.
- 814 *Other Fixed Field Expenses*—
  - 814.1 Bonds (Maintenance and Construction).
  - 814.2 Permits and Licenses, Boiler Inspection.
  - 814.3 Fire Insurance.
  - 814.4 Legal Services.
  - 814.5 Burglar Insurance.
  - 814.6 Association Dues.
  - 814.7 Advertisements.
  - 814.8 Floor Tests.
  - 814.9 Ring Tests.
- 815
- 816 *Temporary Structures (Labor and Material)*—
  - 816.1 Offices.
  - 816.2 Toilets.
  - 816.3 Toolhouse, Blacksmith Shops, Storage Sheds, etc.
  - 816.4 Stairs and Ladders.
  - 816.5 Fences, Sidewalks, Covers and Other Enclosures.
  - 816.6 Temporary Platform and Driveways.
  - 816.7
  - 816.8 Repairs and Protection to Adjacent Property.
  - 816.9 Protection to Pub. Utilities.
- 817
- 818 *Temporary Light, Heat and Power*—
  - 818.1 Light.
  - 818.2 Heat
  - 818.3 Power.
  - 818.4
  - 818.5
  - 818.6
- 819 *General Cleaning*
  - 819.1 Labor
  - 819.2 Teaming.
  - 819.3
  - 819.4
  - 819.5
- 820 *Extra Work*—
  - 821.1 Use as many numbers as accounts charged.

- 822
- 830 *Subcontracts.*
- 831 *Wrecking, Excavating and Shoring, etc.*—
  - 831.1 Wrecking (Contract).
  - 831.2 Excavation (Contract).
  - 831.3 Shoring (Contract).
  - 831.4
- 832 *Heating, Plumbing, Wiring, Elevators, etc.*—
  - 832.1 Sub-heading for each kind of sub-contract.
- 833 *Interior Construction.*
- 834 *Painting and Glazing.*
- 835 *Millwork.*
- 836 *Roofing.*
- 837 *Fireproof Doors and Windows.*
- 838 *Interior Finish.*
- 839 *Structural Steel.*
- 840 *(Extra Work) Subcontracts.*
- 841 *Subheading for Each Kind of Work Done.*
- 850
- 860
- 870 *Repair Contracts (for Small Jobbing Contracts).*
- 890 *Company Expense (not Charged to Owners).*
- 891 *Subheadings for Each Kind of Expense.*

#### DETAILED STATEMENT OF CONSTRUCTION COST.

At stated periods we take from the cost records a summary and detail statement of construction costs in the following form:

| Acct. No. | Name of Acct. | Item. | Amount. | Cost Per Unit. | Est. Cost. | Diff. |
|-----------|---------------|-------|---------|----------------|------------|-------|
|-----------|---------------|-------|---------|----------------|------------|-------|

The last column is in black or red; naturally, the red items will have careful scrutiny to ascertain why costs are running above estimate. This statement is primarily for our own use, but the owner may have a copy if he wishes.

#### OWNER KNOWS TOTAL EXPENDITURE AT ALL TIMES.

Under the cost-plus-fixed fee contract the owner generally furnishes the funds to finance the contract. We maintain an entirely separate bank account for each cost-plus contract representing the owner's funds, and where agreeable to the owner, we arrange for the owner's representative to countersign all checks drawn by us on this account. At the start of the work we furnish an estimate of the anticipated amount of labor and material bills covering an initial period of two weeks or more to the owner, who then advances the funds to cover these requirements. When the owner's receipted copies of vouchers covering this period are returned from the vendors, a statement is given to the owner showing amounts actually paid for payrolls, materials and sub-contract work, with receipted vouchers attached. That total is

then credited to us by the owner on account of contract.

The advantages of having all accounts handled at the job are apparent. The distribution, if not clear from the purchase order, can be referred to the superintendent, and the fact that the books of accounts are at all times open for the owner's inspection is an assurance to him of honest treatment. The fact that he approves purchases of materials before made and again has the opportunity of questioning invoices prior to payment, leaves the control with him and prevents the accumulation of minor disputed items, which if left for settlement until the completion of the contract might not be readily explained.

But a system of accounts, no matter how perfect, cannot influence the cost of work except as it points out from time to time divergence from the preliminary estimate and unless such differences are promptly taken in hand, the reasons investigated and the remedy applied. The success of work under the cost-plus contract is still dependent upon the integrity of the contractor and his ability to perform.

We have used this system of accounting with entire satisfaction to firms mentioned above in this article, and to many others, such as the William Davies Company, Ltd., the largest packers of Canada; the Robert Simpson Co., Limited, Toronto, for whom we built originally on the cost-plus-fixed-fees basis and from whom we have received many repeat orders, being now engaged in work at Halifax on this same basis. This is adequate proof that the cost-plus contract is workable and that the owners not only feel safe, but prefer this method, because under it 90 per cent. of the savings under the preliminary estimate accrue to the owner, because the 10 per cent. retained by us is a reasonable incentive for us to make every possible saving and because additional costs incurred through no fault or omission of the contractor are rightly chargeable against the builder and should not reduce or wipe out his profit. There is incentive for the contractor to make all possible savings under both old and new contract, and some of the savings must go to the contractor to give him that incentive. Ten per cent. we believe to be adequate, and the 90 per cent. going to the owner builds up for us a good-will account which practically assures repeat orders as new work becomes necessary. The building of a relationship which will insure repeat orders is just as important in contracting as in merchandising.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building magazine this side of Manhattan Island.

## *Make BUILDERS' GUIDE The Foundation of Your Advertising Program*

BUILDERS' GUIDE carries more advertising directed to architects, contractors, builders and the building trades than any other medium in Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

The reasons are obvious.

BUILDERS' GUIDE contains reliable advance construction news—the life and soul of the building game.

BUILDERS' GUIDE has a weekly Editorial Review that has established an unique reputation in all building circles.

And BUILDERS' GUIDE is known as headquarters for more than advance construction news. If you want to know where to obtain any kind of building material, equipment or service you will find BUILDERS' GUIDE can give that information quicker than it can be gotten elsewhere. This service is free.

You need the cooperation of this paper. Write for full information.

## THE DESIGN OF STEEL STRUCTURES

By ALBERT S. SPENCER.

The design of steel structures is a task very often undertaken without a reasonably sufficient knowledge of the principles involved. The principal object to be borne in mind by the structural designer—ignoring artistic and utilitarian requirements—is to evolve a structure which necessitates in its construction a minimum amount and cost of materials, the latter being distributed so that the structure will remain stable under the influence of the applied forces. This, no doubt, is a very elementary statement, yet, nevertheless, the saving that could be legitimately made in many designs by a more rigid attention to this fact, if a test be made, would amply repay the designer for his trouble. The economy is particularly marked where superfluous material is accumulated, as in the case of a multiple-storied building or in a bridge. In such a building any undue excess of material in the upper stories has to be supported by the lower stories; and ultimately by the foundations. In the case of a bridge the excess load acts as a force-moment, and where the span is only limited by the capacity of the constructive material this force-moment may have a serious effect in limiting the span.

The theory of structures embraces the application of mechanical principles to determine the stability and strength of structural units and of the units acting as a complete structure. These principles may be applied mathematically or graphically. The mathematical method is generally the simplest when the structure is rectangular in outline and when the external forces are normal to the exposed surface of the structure, while the graphical method is the simplest for structures having an angular exterior outline or when the external forces are angular to the structure. The principal points to be considered are:

(1) So to arrange the outlines of the structure as to reduce its resistance to wind pressure to a minimum and at the same time limit the force-moment of the wind.

(2) The superimposed loads, or applied loads, should be kept down to the minimum consistent with safety.

(3) To examine the structure as to its stability and to endeavor to eliminate any possibility of distortion or displacement.

(4) To calculate the magnitude and nature of the stresses in the various units.

(5) To determine the sizes of the units so that each will safely resist the

greatest stress that can possibly be set up.

(6) Where the force-moments exist, to distribute the materials in any unit so as to create the maximum economic resistance moment, and also by introducing where possible such units as will enable the whole structure to have the maximum resistance moment.

(7) To take advantage of the variable unit resistance of the constructive materials.

(8) To select such sections and materials as are readily obtainable and are economical in cost.

(9) To arrange the members and the connections in such a way as to allow the direction and centre of action of the resistance force to coincide with that of the applied force.

**EXTERNAL FORCES.**—Economy is obtained in a building by the adoption of a low roof in preference to a high type—that is, by the use of a flat roof instead of a ridge roof, particularly if of large span. The economy is more apparent if it is realized that the extra wind force acting on the ridge roof has not only to be resisted by the framework of the roof itself, but also by the superstructure and the foundations.

A very economical and serviceable type of roof which was recently provisionally patented is a combination of the flat and ridge types, in which the ridged portion or portions are limited to the amount necessary for the natural lighting of the interior of the building. By the adoption of the suspension principle in the arrangement of the framework this special type of roof has many advantages where very large areas are required to be roofed, particularly if the supporting stanchions are to be kept to a minimum in number so as to not interfere induly with the manufacturing process.

**FORCE-MOMENTS.**—Reverting to the example comparing a flat type roof with a ridge roof as regards the comparative resistance to wind force, the centre of action of the wind force acting on the flat type roof is much nearer the ground than is that for the ridge roof; consequently, whether or not the ground level is coincident with the fulcrum round which the wind force acts, the moment of the wind force is certain to be reduced thereby, and as a reduction in the external force-moment leads to a corresponding reduction in the required resistance moment of the building, there is in consequence a saving in the material required to give the necessary stability.

**SUPERIMPOSED LOADS.**—By a too rigid attitude in the use of conventional allowances, or perhaps more particularly as the result of compulsory adherence to by-laws, we are often reluctantly compelled to misuse our constructive materials, and thus violate one of the principles of the theory of structures. Under the present restrictions, however, advantage may be gained by calculating all loads on the lean side rather than on the full side, a procedure always followed by competitive designers who wish to survive as such.

**STABILITY.**—Although there are many excellent treatises which deal with the theory of structures, too much attention is given to the application of the theory to the stability of structural units without sufficient consideration being given to the stability of the whole structure. A similar deficiency is noticeable in the treatment of this subject at our technical colleges. The result of this is discernible in present-day drawing-office practice, where many designers completely ignore the necessity for such stability calculations.

**DETERMINATION OF SECTIONS.**—The proportions and properties of the various units must be such that the material is only stressed within safe limits. The proportioning of parts subjected to simple stresses is very elementary and need not be considered here, but some remarks may be made with regard to where compound stresses exist in a unit, such as occurs, for instance, in struts. Units subject to bending stresses should have a modulus of section as large as possible relative to the area, and the resistance arm should be sufficiently large to reduce deflection to within safe limits. Struts, particularly if of great length relative to width, and consequently subject to flexural stresses in addition to compressive stress, should have the radius of gyration as large as possible relative to the area. Where sudden changes of stress occur the material should not be varied in the same degree, particularly if the material is of a granular nature, and for the same reason; also in cases where the nature of the stress varies intermittently a higher margin of safety should be allowed.

(Continued Next Week.)

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

# CARTER CONCRETE

CARTER PAVING COMPANY

639-41 N. 18th St., Philadelphia, Pa.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

## As The Editor Sees It

THE Industrial Conference called by President Wilson failed to accomplish the results desired by the President. In his own words the conference was called "for the purpose of consulting together on the great and vital questions affecting our industrial life and their consequent effect upon all our people, to discuss such methods as have already been tried out of bringing capital and labor into close co-operation, and to canvass every relevant feature of the present industrial situation, for the purpose of enabling us to work out, if possible, in a genuine spirit of co-operation a practicable method of association based upon a real community of interest which will redound to the welfare of all our people."

The withdrawal of the labor group caused the breaking up of the conference, but another has been suggested, and it would be a calamity if Secretary of Labor Wilson's prophecy that "surely human intelligence can devise some acceptable method of adjusting the relationship between employer and employee" were not fulfilled. The results achieved by the Canadian Industrial Conference might help enlighten us in working out our salvation.

The report of Mr. John M. Gaus on the Canadian Conference in the *Bulletin* of the Associated General Contractors of America is published elsewhere in this of America follows:—

"The results of the National Industrial

Conference which was held at Ottawa, Canada," says Mr. Gaus, "are of general interest to American business men and especially to the construction industry. The problems discussed at Ottawa and the disagreements and agreements which were evidenced there closely parallel American experience and American difficulties, which are now under consideration at Washington. Especially interesting to general contractors, however, is the fact that in Canada the building trades are taking the lead in adopting plans for the joint consideration of industrial problems by employers and employees.

Representatives at the conference were selected by national associations of employers on the one hand, and by the Trades and Labor Congress of Canada and the Civil Service Federation on the other hand. A Third Group was also in attendance, representative of various governmental agencies, of technical societies, returned soldiers, municipalities, and agricultural interests. President Trigg and Secretary Frazee, of the National Federation of Construction Industries of the United States were also present as guests of the conference. In all about 200 representatives were in attendance.

### RESOLUTIONS ADOPTED AND DISCUSSED

The program adopted by the conference including a variety of subjects relating to labor including hours, wages, unions, insurance, joint industrial coun-

cils, most of which were covered in a report submitted by the Royal Commission on Industrial Relations on whose recommendation the conference was called. Resolutions adopted unanimously after study and report by special committees and thorough debate on the floor of the conference, provided the following.

The appointment of three Royal Commissions representing employers, employees, and the public (1) to consider the adoption of uniform labor laws by the various provinces and the Dominion Government; (2) to investigate unemployment, sickness, old age, and widow's insurance, and (3) to study the wages paid unskilled labor; the general adoption of minimum wage laws for women and children and special attention to the need of better salaries for school teachers; the establishment of a Government Bureau to gather data and furnish information regarding Joint Industrial Councils with recommendation that they be voluntarily adopted by industries, but without recommendation as to any set scheme; endorsement of the proposed government investigation of the Proportional System of Electoral Representation; approval of the housing plans of the Government; full time education for all up to the age of 14, and part time from then until the age of 16; the removal of restrictions upon the freedom of speech and the press; the provision of public works in times of emergency unemployment, and a

central employment system.

Decided differences of opinion were registered by each of the three groups representing the Employees, the Employers, and the Public on the three committees appointed to consider hours of labor, recognition of trade unions, and the democratic management of government work. While admitting the right of employees to organize, the Employers stood for "open shops" and stated that they "should not be required to negotiate, except directly, with their own employees or groups of their own employees"; the Employees asked official recognition of the unions; the Public submitted no request.

Again, while the Employers asked for further investigation and report on the adaptability of the hours of labor principles of the Peace Treaty to the different industries of the country, the Employees and the Public asked for the adoption of the eight-hour day. The plan of the Royal Commission to apply the principles of democratic management to government work was approved by the Employees and the Public; the Employees believed it to be a question entirely for the government and its employees.

#### BOTH EMPLOYERS AND EMPLOYEES FAVOR JOINT BOARDS

The debates of the conference on the subject of Joint Industrial Councils was most interesting and instructive. Dr. Strachan, of the Imperial Oil Company, first stated the position of the employers. Briefly, from his own experience in the plants of his company he favored some plans for joint boards, but was unwilling to give a blanket endorsement to the particular items of the Whitley Scheme as applied to Canada. In speaking of the plan of employees representation at his plant he said:

#### PLAN FORCES EXCHANGE OF VIEWS

"We have had eight months of this plan. During that eight months we have had twenty-eight conferences; we have settled one hundred and nineteen questions and have settled them satisfactorily . . . ." He then quoted a statement of one of the employees which he added was his own conclusion. "I believe in the plan because I feel that any medium which forces men of varying opinions to sit down face to face, week after week, in an open, untrammelled exchange of views, must result in a fairly even balance of the rights of each being ultimately established. In all the negotiations conducted under our plan I cannot remember when labor has lost ground. Neither our laborers nor our executives are dreamers enough, however, to believe they have found the panacea for all the ills of the industrial world. It is difficult to devise machinery for the adjustment

of human relations, but in practical operation the Industrial Representation Plan of the Company has proved a great advance over any other attempt at the solution of modern industrial problems which has come under my observation."

Mr. Tom Moore, the able leader of the employees' representatives, and President of the Trades and Labor Congress, presented the case of the workers. He was strongly for the Whitley plan, based upon the recognition of trades unions as representative of the workers, and where trades unions were not in existence, in co-operation by all parties in establishing organized conditions.

#### CANADIAN BUILDING TRADES FIRST TO APPLY PLAN

Perhaps the most informing remarks were made by a representative of the Third group, Mr. Wills MacLachlan, of Toronto, an engineer. He had been formerly a laborer, and had also of recent years been consulted by the power companies of Ontario and therefore spoke from a peculiarly valuable experience.

Mr. MacLachlan spoke in part as follows:

"I called a meeting (March 17) in the city of Toronto of the representatives of contracting interests and their employees and on the first of April an agreement was signed between those parties who mutually decided upon various points leading up to what is now called the Toronto Building Trades Industrial Council. . . . Before coming to the conference I took the opportunity of asking the representatives of both sides how it was working out, and they said it was working with perfect satisfaction. I am willing to admit that that plan could not be applied to all industries in Canada. In the Building Trades in Toronto there was very complete organization on both sides, and it was not very difficult to put it

into effect. . . . I am given to understand that it has solved one strike and prevented two others and that there is mutual agreement as to the extension of the work during the coming winter.

. . . . The plan was possibly not entirely the Whitley, as the last part of it was taken from the last part of the International Harvester Company's plan, which was considered to be very applicable."

Subsequently the committee to which the matter was referred by the conference proposed the following resolutions which were unanimously adopted:

"Your committee is of the opinion that there is urgent necessity for greater co-operation between employer and employee. We believe that this co-operation can be furthered by the establishment of Joint Industrial Councils. Your committee does not believe it is wise or expedient to recommend any set plan for such Councils.

"We therefore recommend that a Bureau should be established by the Department of Labor of the Federal Government to gather data and furnish information whenever requested by employers and employees or organizations of employers or employees that whenever it is desired to voluntarily establish such councils the fullest assistance should be given by the Bureau."

The report of the Royal Commission on Industrial Relations speaks of the Toronto Council mentioned above, and states that similar Boards are projected in Ottawa and Montreal. It is noteworthy that both in England and Canada the Building Trades have been first to work out in a practical way these measures for industrial peace at a time when such peace is vital to continuous production, and that other industries and the Government have hastened to benefit from the experience.

## SAFETY IN STEEL ERECTION

COL. E. A. GIBBS

The McClintic-Marshall Company  
Pittsburgh, Pa.

Steel erection, presents in general, the same problems regarding safety encountered in other field construction work.

Like other outside construction work, it is done under more different conditions than shop work, for the reason that the conditions are varied and continually changing, while in the shop many conditions affecting accidents are fixed. The weather plays a much more important part in the field than in the shop. The

force of workmen is much less stable in the field than in the shop. With the field force constantly changing, it is much more difficult to educate the men to safety and to avoid getting men who are unsafe on the work.

There are, however, certain differences between steel erection and general construction: the loads are generally much heavier and handled under more varying

(Continued on Page 682.)

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

## Proposals

### INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 21, 1919.—Sealed proposals will be received at this office until 3 P. M. November 18, 1919, and then opened, for remodeling at the United States Post Office and Custom House, Fall River, Mass., in accordance with the specifications and drawings mentioned therein, copies of which may be had at this office or at the office of the custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 20, 1919.—Sealed proposals will be opened in this office at 3 P. M. November 20, 1919, for furnishing materials for the construction of the United States Post Office at Lewistown, Pa., including materials for concrete, reinforced concrete, stone, granite, brick, structural terra cotta, structural steel, miscellaneous iron and steel work, composition roofing, slate roofing, sheet metal work, skylights, plastering, interior marble, sanitary slate, lumber, millwork, painting, glazing, hardware, plumbing, heating, electric work, etc., in accordance with drawings, specifications and bills of quantities attached thereto, copies of which may be obtained from the custodian of the site at Lewistown, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 20, 1919.—Sealed proposals will be opened in this office at 3 P. M. November 20, 1919, for furnishing the labor required in the construction complete, with materials that will be furnished by the Government, of the United States Post Office Building at Lewistown, Pa. Drawings and specifications may be obtained from the custodian of the site at Lewistown, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Oct. 24, 1919. Sealed Proposals will be opened in this office at 3 P. M., November 24, 1919, for remodeling the United States Post Office Building at Chester, Pa. Drawings and specifications may be obtained from the Custodian of the building at Chester, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 672.)

conditions at a greater distance from the ground. There is an element of risk in every lift. While the derrick may have been tested throughout and proven safe, an accident may be caused by a bridge-man making one careless hitch on a load of beams.

The appliances for erecting steelwork have been developed and increased greatly during the past twenty years and erection is relatively much more safe. Nevertheless, many new difficulties have arisen. The average weight of pieces to be handled has greatly increased while certain limiting features have remained unchanged, such as track clearances and gage. A girder may increase in weight but the derrick car that handles it must run on and be supported by the same track as previously. This increased weight has had one benefit. Heavy members cannot be juggled and handled in any manner that the foreman desires. The equipment can be designed to handle these in only a few ways and the foreman must be governed accordingly. Therefore, the work is likely done as the design of the equipment contemplates and with corresponding safety.

Accidents are divided into two classes: real and preventable. Real accidents are those which occur through no neglect on the part of the workmen or the employer which could reasonably be expected to be foreseen and prevented. Preventable accidents are those which could have been avoided, had either of the men or those in authority over them exercised the proper amount of vigilance. It is conceded that well over half of all accidents are preventable and the proportion is probably higher.

We are, of course, concerned with both classes of accidents, but particularly with those that can be prevented. There is no question about the desirability of preventing accidents. The problem is how to accomplish it.

Preventable accidents may be divided into three classes:

1. Accidents due to workmen themselves by reason of being physically incapacitated: ignorant, inexperienced, intemperate, careless or reckless, acting the fool, or actual disobedience.

2. Accidents due to foremen:

Improper selection of men placed in charge of work or doing the work.

Inadequate instruction to workmen.

Putting men or allowing them to go into dangerous places unnecessarily.

Lack of vigilance and orderliness on the work.

Failure to investigate questions of safety made by workmen.

3. Accidents due to superiors: by reason or improper selection of foremen, safeguards, equipment for doing the work and instructions regarding its use.

It is believed that the greatest difficulty is with the men themselves. Construction companies long ago recognized the necessity of having proper equipment, and that phase of the situation is in relatively good shape.

The foreman, while still skeptical as to the value of certain expedients for safety, can be educated more easily as they form a small class, and as their tenure of employment depends on the results they produce it isn't hard to impress them with the effect of accidents on their work. It isn't so easy to get them to enforce safety methods. The conditions on a job are changing rapidly and the foreman is crowded to make time. He cannot do everything and naturally devotes his time to things that speed the work and affect the direct cost. Only constant pressure on the question of safety, and using every accident to point out the neglect of foremen or men will bring results.

The workmen are by nature and training a daring class of men and instinctively feel that their courage and skill is question when they are asked to comply with many of the expedients for safety. However, they can and must be educated to take proper precautions to protect themselves and their fellow-workmen. Bulletins, notices, and placards of various kinds containing written and illustrated cautions and effects of neglect are very good. Our company, in 1910, issued a book to its foremen containing instructions and cautions for the prevention of accidents. We also started at that time to post a bulletin with certain of the most common faults of workmen and how to avoid them. A small copy of this bulletin is handed to each bridgeman whom we employ. It contains, several short paragraphs, as follows:

*Don't Be Reckless.* More accidents occur through recklessness than any other cause. Don't walk on rods. Don't ride a load. Don't ride on a locomotive crane.

*Don't Be Careless.* Look where you step, and be sure that on what you step is safe and secure. Don't step on ends of loose plank. Don't start to slide down a line unless you are sure the ends are fastened.

*Be Orderly.* Do whatever you do in an orderly, careful manner. Pile material so that it cannot roll, fall, tumble, or be blown over. Don't let tools or equip-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.**

ment such as bolts, nuts, drift pins, blocks, dolly bars, etc., lie around so that they can be knocked off the work or so that anyone can fall over them.

*Unfit Condition.* Don't go to work if you have been drinking or do not feel well. If you are lame or have any defect in hearing or eyesight you should not work at this business, as by so doing you endanger your own and fellow workmen's lives. If you are inexperienced in, or unsuited for the work to be done, don't undertake it.

*Be Vigilant! Watch What You are Doing.* Don't stand or work under a load. Don't go in the "sight" of a line nor stand in front of a snatch block. Don't work on or about a crane runway when the crane is in use unless there is a stop between you and the crane.

*Don't Use Unfit Tools.* Be sure the tools and equipment you use are in good working order. If they are not, don't use them.

Don't work with men who don't observe these rules.

The first requirement for safety in erection is to have the proper equipment. Foremen and workmen cannot be expected to take the necessary precaution if they are not provided with proper equipment. It must be kept in good condition by constant attention on the job and by overhauling at the completion of the job if necessary.

Some of the principles observed by our company regarding equipment are:

1. Use no wooden travelers or derricks, except very light derricks and jinnywinks.

2. All castings in erection equipment carrying any strain to be made of steel. We make all of our sheaves for cable blocks, except small blocks for  $\frac{5}{8}$ -inch cable, of steel. All castings when bending strains are encountered are made of vanadium steel. Vanadium insures a more uniform casting and tends to eliminate blow holes.

3. Forgings of importance such as the headblock of a derrick car are made of nickel steel.

4. Use the very best manila lines.

5. Use cable slings, instead of chains. Very important.

6. Automatic brake in addition to mechanical brake on all electric hoists.

In the erection of ordinary work the equipment provided, if it is of the best quality, is amply strong for the purpose. It simply requires proper handling and reasonable care.

For the heavier classes of work, heavy and frequently special equipment must be used. This equipment requires good

designing and the best materials. Good designing implies a thorough knowledge of how the equipment is to be used, and the provision for all reasonable uses to which it may be put. It is the duty of the foreman, after being properly instructed, to see that the equipment is put to no uses for which it was not intended unless necessary, and then only after proper investigation by an engineer.

Erection equipment should be so designed as to make all stresses as determinate as possible. Even then the many positions in which a load can and will be handled will produce more varied strains and conditions than occur in bridges or other permanently fixed structures. Be sure that all stresses and combinations of stresses are fully cared for. Then, not only make the main members strong enough but pay especial attention to details. Most failures in erection equipment are primarily due to poor details. Booms, with light lacing or lacing improperly detailed are common. Poor detailing often produces very great bending stresses that are ignored.

Erection equipment should be most carefully inspected during its manufacture and test reports required for steel castings, all alloy metals, and steel cables. The assembling and erection of a traveler or heavy derrick should be carefully done to insure that no stresses are introduced by improper alignment. This is extremely important. Booms and traveler hoists should be tested, with gradually increasing loads before using them to full capacity. While in use they should be inspected frequently to see that no weaknesses have developed through wear or other means, and that the equipment is working as designed.

Instructions should be issued as to just how equipment on heavy work is to be used and nothing left to chance. A movement of a very short distance in the setting of a traveler or in the radius of a heavy boom may be perfectly safe as far as the equipment itself is concerned, but may endanger the falsework or the permanent structure.

In the erection of falsework, great care and an accurate knowledge of conditions is necessary. Timber should be carefully inspected and none but of good quality used. In case mudsills are used, examine the soil carefully and provide sufficient mudsills to support the load with ample safety.

The matter of bracing the falsework bents themselves, their connection by bracing and struts, and the fastening of the end bents to the piers or abutments so as to prevent any longitudinal move-

ment of falsework, are all points where too much care cannot be exercised.

Following are some cautions that if followed will prevent many of the accidents in steel erection:

1. Select the proper man for the particular task in hand.

2. Do not order men to work in unnecessarily dangerous places, and be on the alert to see that they do not run unnecessary risks of their own volition.

3. Do not allow the men to work on corrugated iron roofs or steel when there is a coating of ice thereon.

4. Walking on rods, riding loads or locomotive cranes, sliding down lines without inspecting the fastening, standing in the bight of a line or in front of a gate block, are all unnecessary risks and should not be permitted.

5. Do not permit men to work about crane runways without placing an effective stop between the men and the traveling crane, and see that the electric wires are properly insulated.

6. Require the rivet boss to inspect carefully all riveting scaffolds. Improperly hung scaffolds have caused many serious accidents. Only the best materials should be employed. Clear spruce is the best.

7. Pipe used as needle beams should not be spliced.

8. All scaffold plank should have a stop bolt about 6 inches from each end to prevent it from slipping off the needle beam and if the scaffold is inclined it should have cleats nailed on the plank. All scaffold material should be tested for twice the load it is expected to carry. Even this care will not suffice unless the men are careful. This was demonstrated in a case where a riveting gang used their scaffold as a brace for an air buckup. The scaffold—amply strong for its purpose—broke under this sudden additional load and the men fell into the river.

9. On high bridge work, scaffolds should be provided with a railing. This is a requirement by law in some states.

10. Piling of material must be carefully watched, particularly with heavy work. Skide should be amply heavy and level, and the pilese not top heavy. Poor piling of materials is responsible for a large number of accidents.

11. When it is necessary for men to work above other men, put up a danger sign calling attention to the fact that men are working overhead.

12. Keeping small tools in condition will avoid many accidents.

13. Wearing of goggles while chipping is a necessary precaution, but one the men dislike to follow.

14. In the use of cable slings, inspect them frequently and keep them properly oiled, and in handling heavy loads pad the sharp corners to prevent cutting the cable—*National Safety Council*.

\* \* \*

#### THE DESIGN OF STEEL STRUCTURES

(Continued from Last Issue.)

**RESISTANCE MOMENTS.**—Where structural members are subject to flexural stresses economy may be obtained by distributing the material so as to produce the maximum modulus of section or radius of gyration (according to the utility of the member) relative to a given area. This economy is widely recognized; but taking, for example, the list of standard joist sections, it can be easily demonstrated that the compilers have not taken full advantage of this principle of economy in the use of materials. Now the basis of measurement of the comparative efficiency should take into consideration the area—or weight—resistant lever arm or depth, and the modulus section—that is to say, maximum efficiency will be attained when all the resistant factor are a maximum for any given sectional area, after due allowance has been made for limits of production.

A similar criticism may be applied to the inefficiency of our joist sections when used as struts. This has been recognized, probably, by the originator of the broad-flange beam; yet, although the latter type of beam has been in existence for many years; its use has not been encouraged.

It is very desirable that a more efficient range of joist sections should be obtainable, as under the present circumstances we are making a costly misuse of material and seriously jeopardizing our position in competing for international trade in structural work.

**UNIT STRESS.**—The proper use of materials so as to take advantage of the variable utility of constructive materials is generally understood. By way of illustrating this point reference may be made to reinforce concrete construction, in which a compound material composed of concrete (which is strong in compression and weak in tension) to resist the compressive bending stress, while the tensile bending stress is resisted by the steel reinforcement.

**SELECTION OF SECTIONS.**—The total number of sections in any given structure, particularly if speed of manufacture is essential, should be kept to a minimum, and theoretical considerations should be subordinated to practical necessity.

In locating the various members of a structure, or part of a structure, their position should be such that the centre of resistant action should coincide, for economic reasons, with the centre of action of the applied force. This principle

is often violated for practical purposes—for instance, to simplify the connection in fixing the position of the members of a roof truss. This departure is permissible, but where the effect is considerable, as a force-moment of serious magnitude may be created, due allowance should be made for its resistance. The principle is often violated also in the design of connections by locating the rivets or bolts in such a way that the resultant resistance force does not coincide with the applied force, with a similar result to that hitherto referred to.

**PRINCIPLE OF STATICS.**—A full consideration of the fundamental principles of statics is beyond the possibilities of this paper, but attention may be directed to those which are most often misapplied.

With regard to the variable distribution of stress, there are two theories regarding the exact nature of the variation, the straight-line theory and the parabolic

theory, the former being preferred owing to its simplicity, although the latter is probably more correct. The basis of the straight-line theory is that the cross-section of the beam simultaneously acts round two fulcra, one of which is in the plane of the outer compressed fibres and the other in the plane of the steel. The basis of the parabolic theory is that the fulcrum in the compressed half is situated at the centre of action of the area of concrete subject to compression, and not at the upper edge. The resistant lever arm is greater for any given section by the parabolic theory than by the straight-line theory, and as the area of the parabola is greater than the area of a triangle with similar base and height, the total resistance of the compressive area is also greater. It will be noted that the error in the straight-line theory is on the side of safety.—*The Architect and Engineer*.

## WINTER BUILDING THE ONLY ANSWER TO THE YEAR'S CONSTRUCTION DELAYS

### Concrete in Cold Weather Offers Strong Advantage to Owners

By A. E. WELLS, *President*, Wells Brothers Construction Co.

On the verge of winter, construction blocked in hundreds of cities, a shortage of many materials of construction and of labor and yet withal, an acute shortage of homes, offices, stores and in many cities, of office buildings, factories and warehouses—what is the answer?

The answer lies in winter construction, in proceeding with work during December, January and February, which have been normally "closed" months. Winter work is not new. It has been practiced for years, its safety adequately demonstrated, its economy proved. It should be more generally practiced.

Any owner who, through prosecuting work during cold weather, can get occupancy of factory or warehouse or can lease apartments, offices or store space on May 1, stands to gain far more than the added costs of winter work.

Not only the owner, but builder, engineer and architect, gain. There is financial loss to the contractor who breaks up his trained organization, only to build it again in the spring. New men must take time to accustom themselves to working together and owners pay the bill in increased costs. Architects' and engineers' offices are frequently idle through much of the winter. Building superintendents have nothing to do and owners pay for unproductive overhead.

Perhaps the best way then, to reduce the cost of building is to keep architects', engineers' and contractors' forces busy twelve months of the year.

#### WHY DOES CONSTRUCTION STOP IN WINTER?

Primarily the reason why building has been inactive is that concrete does not harden so rapidly when its temperature hovers near freezing. But we heat our homes, offices and stores and coal is a comparatively small operating cost. We are today able to enclose a structure, warm it with simple coke stoves, heat aggregates prior to mixing with Portland cement, and keep the concrete or mortar warm until hardening has occurred.

Without these precautions, cold weather work is impossible, but the precautions are simple and reasonably inexpensive. Why not do the logical thing and consider the winter as an open season for all but the most exposed class of construction.

Our organization has continued to lay brick and place concrete under zero temperatures even in the northern cities of Canada. A part of our normal equipment is sufficient tarpaulins to enclose practically any structure and sufficient salamanders or coke stoves to keep such enclosures warm. Boilers of any type, frequently those used to furnish steam for hoisting, supply live steam for heating aggregates and water and for thawing snow and ice from forms and reinforcing steel.

While a heavy snow may temporarily delay the delivery of materials, yet deep snow is seldom encountered. It is tem-

## *A Mark of Progress—86% Increase in Paid Advertising in Three Months*

*Builders' Guide* has practically doubled the amount of advertising in the past three months.

This remarkable growth is part of the result of a great revival of faith in Sectional Trade Papers spreading all over the nation.

The day of excessive appropriations is giving away to intelligent selection of mediums, to the realization that covering a territory geographically is not the same thing, nor as effective as intensive development of each section by means of sectional papers.

*Builders' Guide* is preparing to play an important part in this great educational work. *Builders' Guide* is consistently improving in appearance, advertising, news and technical articles.

You will find this paper of ever increasing value to you. You will find advertising more productive of results than ever before.

Choose this time to begin the development of your business and begin it by making *Builders' Guide* the foundation of your advertising program.

### **Building News Publishing Company**

**Perry Building - Philadelphia**

perature alone that commonly hampers work, and temperature need not be feared.

#### PLANT LAYOUT FOR COLD WEATHER WORK.

In laying out a plant for handling concrete in winter, or where the work is likely to run on into winter before completion, there must be provision for the proper heating of materials and water. In case of sand and gravel in open storage piles, it is only necessary to lay a grid of steam pipes under the material piles and place a tarpaulin over the pile. From one main through the centre, branches should extend in both directions every six feet. These branches should be drilled with  $\frac{1}{8}$ -inch holes spaced about 18 inches apart. Several hundred yards of material stored in one pile can be heated in this way with the steam from an ordinary hoisting boiler. Several days prior to concreting, steam should be turned into the pile during working hours, which will be sufficient, except at times of extreme cold, to maintain the necessary temperature.

When material is stored in bins, a series of pipes should be laid on the floor of the bins, feeding from a main pipe at the top of the sloping floor. Steam radiates through the entire contents of the bin, and if a canvas cover is pulled over the top when work is stopped at night, the material will retain its heat, except in very cold weather, when a small amount of steam may be needed at night.

It is necessary also to heat mixing water and a steam line running directly into the water tank is the customary way; a one-inch line being sufficient to heat water for a one-yard mixer.

But concrete poured into forms exposed to cold would lose its heat before hardening had progressed sufficiently. Forms must, therefore, be protected and the most satisfactory means is a complete canvas enclosure, with salamanders or coke stoves to maintain a temperature of 45 degrees or over, within. Several hours before concrete is poured, salamanders are started in the story below the forms, unless that story is already heated. Immediately after pouring, a sufficient number of salamanders are placed above the new concrete to insure its safe and thorough hardening. These will furnish heat for the floor above.

This method of enclosure and heating necessitates that the form work for the floor above that being poured shall be in place, in order to serve as a roof under which concrete may be kept warm; although in the case of steel frame structure, it may be possible to support canvas upon the steel because of the floor above.

Forms for the story above are supported as usual, upon posts, but since the floor slab of the story supporting these posts is not yet poured, it is customary to set the posts upon concrete blocks of the proper depth, so that upon pouring the block becomes a part of the finished floor. This requires setting blocks to grade and finishing their upper surface.

It is, of course, necessary that the workmen be watched somewhat more carefully on winter work. Snow or ice in the forms is detrimental to good work. Careful inspection is necessary at every stage of the work, but slipshod methods are probably no more likely to affect quality in winter than in summer.

Where the enclosure in canvas is comparatively complete, workers operate at practically normal efficiency, but there are some delays likely to occur through slow delivery of materials during periods of snow. Yet the added costs are more than compensated for by the certainty of quicker occupancy and reduction of interest on money tied up in the incompleting building. It would seem folly to cease work on a structure where there is need of early use.

The urgent need of enforcing regulations directing the proper use of materials in building construction is again strikingly shown in the second annual report of the State Fire Marshal of Oregon, who gives the following as a record of defects found by the Oregon State inspectors during the year ending March, 1919:—

|                                               |     |
|-----------------------------------------------|-----|
| Defective wiring .....                        | 229 |
| Floors and walls unprotected from stoves..... | 191 |
| Defective pipes, stoves and flues .....       | 125 |
| Found chimneys on brackets .....              | 482 |
| Exposed and unprotected openings .....        | 131 |

The fact that 482 chimneys were found supported on brackets is an indication that a most primitive method of construction still exists and again emphasizes the fact that proper building regulations are most essential in all cities, large and small, for fire prevention.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

#### HE WAS WISE

"When do you think my house will be finished?" asked the owner of the contractor's foreman.

"The first of October," was he reply.

"You mean September," asked the owner.

"No, sir," replied the foreman, "I meant what I said—October."

"But there is no such month," said the owner.

"I know," was the reply. "That is why I said it."—*Ex.*

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

# CARTER CONCRETE

The Kind That Lasts

**Carter Concrete** PAVEMENTS, FLOORS, CONSTRUCTION—BUILT BY SPECIALISTS SINCE 1888—BUILT TO PREVENT CRACKING, CRUMBLING and DECAY—BUILT TO LAST.

ORIGINAL COST OF **Carter Concrete** LOW—UPKEEP COST NEGLIGIBLE.

SPECIALISTS IN CONCRETE ROADWAYS

*One of our Engineers will help you in Concrete Problems and gladly give you an Estimate.*

**CARTER PAVING COMPANY**

639-41 N. 18th St., Philadelphia, Pa.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

Sole Representative of Mack & Pennsylvania Clay Works

## If You Want Flooring That is Wear Proof

Choose flooring that resists abrasion, for abrasion, like erosion is a physical force that causes the gradual crumbling and wearing away of every atom of flooring material.

Immunity from abrasion is the distinctive feature of

## Mineral Flooring

No amount of wear can cause Mineral Flooring to crumble and disintegrate for it is made of specially tough wear resisting mineral rock—stronger and more durable than natural stone.

Mineral Flooring is absolutely fire proof, vermin proof, damp proof. We install any size job in a single day.

### A Few of the Reasons

why you should install the **Peninsular Combination Range**:

A Range that burns either Gas, Coal or Wood without any changing or removing of parts—separate or both at the same time—whose oven is always ready for instant use.

A Range that takes up no more space than an ordinary kitchen range, bakes and broils perfectly under all conditions and gives a lifetime of such service.

A Range that makes the kitchen cool in Summer, warm in Winter—beautiful in design, substantial, and easy to keep clean. Secure our prices.

Front St. & Fairmount Ave.

Bell Phone, Market 3879

PHILADELPHIA, PA.

## SHEATHING and METAL LATH

erected at one operation. Time and Labor Saver

All the steel with the exception of the binder ribbons is on the face of the felt, consequently every ounce of the strength of the metal is brought into play—equal reinforcing being provided in every direction, thus impartially distributing the stress over the entire area.

### Tends to Prevent Cracking of Plaster

The strands run diagonally, slanting in both directions. Hence, no matter in what direction a crack may start to form, a strand of steel will be found lying across its path to resist the tendency.

### Insures a Perfect Bond—Saves Plaster

## Pearce Fireproof Company

## An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

## ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

## I Want a Home with a Humphrey

"I COULDN'T be content with the  
old troublesome ways of heating  
water after seeing how convenient and  
how positive the Humphrey system of  
hot water service is."

Nowadays, a home is  
cozy and comfortable, only  
if it has a good supply of  
hot water always ready.

Wise householders are  
asking for Humphrey gas  
water heaters. They know  
they are dependable and  
economical.

Our builders service  
sheets in your files will  
enable you to select the  
right size and style.

Phone us for these.

### Heat the Whole House Cut Fuel Bills

There are no cold rooms in the home heated by the Pawnee Pipeless Furnace. This simple, efficient system maintains an even temperature of 70 degrees throughout the entire house even in zero weather at a fuel saving of from 25 to 40 per cent. No pipes, no repairs. No coal gas or dust. Low initial cost. Easily installed in about a day without tearing up walls. Burns hard or soft coal, coke or wood. Write for illustrative booklet.

## As The Editor Sees It

PHILADELPHIA is as much concerned with the difficulty of providing people housing facilities as any other city. The great decrease in the normal rate of home building during the war and the great influx of workers for the war industries operating here have greatly increased the city's problem of housing her people. Interesting light on conditions existing here and elsewhere is thrown on the subject in the report issued recently by the Bureau of Labor Statistics of the United States Department of Labor on the "Family Budget and Health." In summarizing, the report says:—

"Judged by the standard that overcrowding begins when there is more than one person per room, a considerable proportion of the families included in this investigation must be classed as overcrowded. A study has been made of 2,455 families living in rented houses in 24 different cities. Fifty per cent. of these had less than one room per person, 17 per cent. had less than 0.7 of a room per person, and 3 per cent. less than 0.5 of a room per person. Very little information was gathered which will give conclusions as to housing conditions from a sanitary standpoint. In New Orleans, however, 31 per cent. of the 147 white families, included in the investigation, lived in houses without bath rooms, and 90 per cent. of the 102 colored families."

That Congress, with the exception of Senator Calder and a few associates, is

not awake to the demands of the situation, is the conviction of the "American Contractor."

"There is one way to impress this matter on the members of Congress," says this organ. "That is by personal appeals to the Senators from your State and your member in the lower house. If contractors, architects, engineers, real estate men, bankers, and others who are in touch with local conditions in various localities, would at once take time to place the home building question before their representatives in Congress, we could expect an awakening to the seriousness of the situation and, perhaps, some ameliorative action from this session of Congress."

\* \* \* \*

LUMBER production is of vital importance to construction and all allied industries. A campaign is now on foot to urge legislation which will aim for the preservation of the present available timber supply, and which will provide for increasing the forest lands of the future. In the interests of forestry, a conference was held recently at Indianapolis. Among the speakers were H. S. Graves, United States Forest Service.

"The solution of our forestry problem," said Colonel Graves, "consists in stopping destruction by fire and other agencies, by using methods that make possible natural reproduction after log-

ging, and by restocking the tree growth of lands that have been made economic wastes. The fear has been expressed by some that such an objective conflicts with the expansion of agriculture and stock raising. Exactly the contrary would be the result. No sane program of forestry would propose the use of lands for forestry that are better adapted to agriculture and settlement. Forestry, agriculture and stock raising go hand in hand."

\* \* \* \*

"Today the home product does not nearly meet the annual requirements, but, further than that, the cutting that is done far exceeds what is grown each year. It is probable, from the best estimates that I have been able to secure, that the annual growth of material of potential value is not over one-quarter of what is cut each year. This means that the forests are progressively losing ground with considerable rapidity."

"This deficit is due only in part to the clearing of land for agriculture. It is due also to the failure to handle the lands in a way to secure good reproduction and properly to protect the young trees that become established. With better care and management forest lands should yield two or three times the present growth, and this would, I believe, be possible without checking the extension of cultivation over lands suited to that purpose."

## THE INTEREST OF WOOD USING INDUSTRIES IN THE FOREST PRODUCTS LABORATORY AND THE NEED FOR MORE GENEROUS APPROPRIATION BY CONGRESS FOR ITS SUPPORT

The Forest Products Laboratory of the United States Department of Agriculture was established nine years ago at Madison, Wisconsin. The purpose of the Laboratory is to ascertain, by scientific and technical investigations, the various technical properties and possible uses of the different species of wood and to develop for the benefit of the public and the lumber and wood-using industries the industrial uses to which the various woods may be best adapted.

The Laboratory has already done much useful service to wood-using industries, to users of wood products and to the public at large. Tests of strength, toughness, and other physical properties of wood; and of methods of drying; investigation of uses for built-up timbers and plywoods; methods of waterproofing and fire protection; strength tests on types of wooden boxes and other containers; analysis of comparative merits of different species of wood for manufacture into paper, pulp, furniture, implements and miscellaneous products; and investigations in wood preservation, chemical distillation of wood and utilization of by-products are some of the lines of activity in which the Laboratory has been engaged. These will be expanded as soon as adequate appropriation has been secured.

The Laboratory is supported by Federal appropriation. During the war its activities were greatly increased and directed almost exclusively to war work. For this purpose its financial support came in large part from the War and Navy Departments. The immediate emergency having disappeared, support of the Laboratory through these special funds has been largely withdrawn.

The appropriation authorized by Congress for the year beginning July 1, 1919, is no greater than the annual pre-war appropriation, viz., \$175,260. Those engaged in wood-using industries and familiar with the work of the Laboratory, realize the great value of its activities and the services of almost incalculable value which it is prepared to render to those industries, as well as to the general public. Resolutions have repeatedly been adopted by groups of manufacturers endorsing the work referred to the Laboratory and urging the continuance and extension of its activities. But these have not been brought with sufficient

force to the attention of Congressmen and Senators.

The forests constitute one of our greatest national resources. Concerted effort is now on foot looking to preservation of future supplies of timber for the use of wood and wood-using industries. The Laboratory can serve the public by making available to the users of wood and wood products the most efficient methods, so that there shall be the least possible waste of valuable material.

Representatives of a number of the important wood-using industries vitally interested in the future of the Forest Products Laboratory met in Chicago on June 26, 1919, at the call of the Chicago Association of Commerce, to discuss ways and means of securing adequate support for the activities of the Laboratory. As a result, a committee was selected representing the national and other associations of leading wood-using industries, having the specific purpose of endeavoring to secure concerted action on the part of all industries having common interest in the maintenance of the Laboratory to the end that adequate appropriation for its housing and maintenance be secured at the earliest possible time.

This committee, after careful investigation, is of the opinion that an annual appropriation for the operation of the Laboratory, of not less than \$500,000, should be made by Congress; this amount could not be safely reduced without great loss, not only to the wood-using industries, but to the public, which is ultimately the chief beneficiary of the services rendered by the Laboratory.

## BUILDING HEIGHTS IN THE UNITED STATES

**A**N interesting resume of the regulations in various cities regarding the height of buildings is given by Mr. M. R. Fleming, of the American Bridge Company in the Journal of the Western Society of Engineers. An abstract of the paper follows:

The term "height of a building," according to the New York code, means the vertical distance measured in a straight line from the curb level to the highest point of the roof beams in the case of flat roofs and to the average height of the gable in case of roofs having a pitch of more than 20 degrees. According to the Chicago code for non-fireproof buildings, it is measured from the average established sidewalk level to the highest point of the roof thereof and for fireproof buildings it is measured from the average grade of the street frontage of the building to the top of the highest point of the external bearing walls. Other definitions differing slightly from those of New York and Chicago may be found. Cornices, parapet wall, penthouses and bulkheads are not often considered in determining height, but building codes generally place limitations upon their height and area.

Frame buildings outside of fire limits are variously limited to 2, 2½ and 3 stories, or 35, 40, 45 and 50 feet in height.

Buildings having bearing walls of hollow terra cotta or concrete building blocks are limited to 3 stories and 40 feet in height.

The code of Terre Haute has a clause, "No school building hereafter erected shall be more than two stories and basement in height." The code of Dayton fixes a maximum distance to the upper floor level for different kinds of buildings, the distance for the primary, grammar and high school buildings being 38 feet above the average grade.

A long list of cities fixes the maximum height for non-fireproof buildings at 65 or 70 feet. Kansas City (Kansas) allows but 50 feet. Detroit for a certain type allows 100 feet. In Rochester the height of a tenement house "shall not exceed by one-quarter the width of the street on which it stands."

The storm center of the whole subject of building heights is the fireproof commercial building. The factors that enter into its regulation are many and complex. Much has been written on the subject. The "Report of the Heights of Buildings Commission of New York City," 1913, is a book of 295 pages with maps, diagrams and illustrations. The literature on city planning that is becoming so abundant is at one in charging the skyscraper with being a detriment to the ideal city. The

# Advance Construction News

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Apartment House**, Central Philadelphia. Architect, J. Warren Myers, Middle City Building, Philadelphia. Owner, name withheld. Brick, 16 stories, 52x197 feet, slag roof, marble floors, hollow tile, elevators, steam heat, electric light, tile and marble work. Architect will take sub-bids in one week.

**Store Building (alts.) to Store and Lodge Room**, 1901 Orthodox street. Architect, Herman H. Kline, 1612 South Fourth street, Philadelphia. Owner, name withheld. Exterior iron stairs, pine floors, steam heat, electric light. Plans in progress.

**Residence**, Germantown, Philadelphia. Architect, Lawrence Visscher Boyd, Harrison Building, Philadelphia. Owner, John A. Seeds, 716 West Upsal street, Germantown. Stone, 2½ stories, 40x51 feet, slate roof, pine and oak floors, stone foundations, hot water heat, electric light, tile work. Architect taking bid due November 5th from Hogg Const. Co., Denckla Building.

**Bank Building (add.)**, 4405 Germantown avenue, Philadelphia. Architect, Thomas B. Lippincott, 1505 Arch street, Philadelphia. Owner, Wayne Junction Trust Co., care of Thomas M. Scanlon, secretary and treasurer, 4401 Germantown avenue. Brick, stone and steel. Preliminary plans in progress.

**Warehouse**, Southeast Corner Fifth and Montrose streets, Philadelphia. Architect, Herman H. Kline, 1612 South Fourth street, Philadelphia. Owners, Schultz & Miller, Northwest Corner Fifth and Fitzwater streets. Tapestry brick, 3 stories and basement, 36x80 feet, slag roof, pine floors, hollow tile, metal lath, electric elevator, plastering, steam heat, electric light, rolled steel sash, hollow metal skylights, steel rolling shutters, iron work. Architect taking bids due as soon as possible. Stang & Mitchell, Real Estate Trust Building; M. H. McCloskey, Jr., 1620 Thompson street, and Fred Quate, 1323 Snyder avenue, are figuring.

**Residence (also Garage)**, Cliveden street and Lincoln Drive. Architect, M. H. Dickinson, 1705 Chestnut street, Philadelphia. Owner, Samuel Stern, Commonwealth Building, Philadelphia. Stone, 2½ stories, 26x43 feet, and 1 story, 18x22 feet, slate roof, oak floors, cement work, hot water heat, electric light, tile work. Architect will be ready for sub-bids in one week.

**Residences (alts. and add.)**, 418-20 South Carlisle street, Philadelphia. Architect, Mahlon H. Dickinson, 1705 Chestnut street, Philadelphia. Owner, name withheld. Brick, 3 story add., 12x13 feet, slag roof, general interior alterations, painting, papering, hot water heat, electric lighting and fixtures, oak floors, partitions and stairways. Architect will be ready for sub-bids in ten days.

**Storage Building**, Wolf, Ritner, Water and Swanson streets. Architect, Herman H. Kline, 1612 South Fourth street, Philadelphia.

Owners, Pottash Bros., 612 North American street, Philadelphia. Brick, 2 stories, 400x300 feet, asphalt roof and floors, hollow tile partitions, steam and hot water heat, electric lighting, rolled steel sash, rolling steel and kinneer doors, hollow metal skylights. Office building, brick and stone, 2 stories, 25x48 feet, slag roof, maple floors, hot water heat, electric lighting. Revised plans in progress.

**Store and Office Building**, 22-32 North Thirteenth street and 1302 Filbert street. Architect, L. E. Denslow, 44 West Eighteenth street, New York City. Lessees, United Cigar Stores Co., 44 West Eighteenth street, New York City. Plans in progress. Too early for details.

**Residence and Garage (alts.)**, 32 Summit avenue, Chestnut Hill, Philadelphia. Architects, De Armond, Ashmead & Bickley, Franklin Bank Building. Owners, William Lord Sexton, Highland Station, Chestnut Hill, Philadelphia. General alterations, new partitions, tin roof, oak floors, cement work, vapor vacuum heating, electric work and fixtures, mill work, cabinet work. Architects taking sub-bids.

**Store Building (alts.) to Bakery**, Fifty-second and Ludlow streets, Philadelphia. Architects, Folsom & Stanton, 1328 Walnut street, Philadelphia. Owner, William Meenehan, Fifty-second and Ludlow streets, Philadelphia. Brick and iron work, carpentry, painting and glazing, plumbing, electric repairs, heating extension. Architects have received bids.

**Hotel (alts.)**, Broad and Walnut streets, Philadelphia. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owners, Ritz-Carlton Co., on premises. Changing heating and plumbing, plastering, painting, store fixtures, flush bulks. Owners will build.

**Residence and Garage**, Forty-seventh and Pine streets, Philadelphia. Architect, John L. Coneys, Drexel Building, Philadelphia. Owner, H. S. Matlack, 4131 Spring Garden street, Philadelphia. Brick and hollow tile, 2½ stories, stone foundation, hot water heat, electric light, tile work, oak floors, roofing undecided. Clarence R. Siegel, Forty-seventh and Larshwood avenue, is taking sub-bids.

**Residence**, Overbrook, Philadelphia. Architects, MacKenzie & Wiley, Liberty Building, Philadelphia. Owner, Green Hill Farms Co., care of Morris Wood, Sixty-fourth and City Line. Stone, hollow tile and stucco, 2½ stories, 29x57 feet, shingle roof, oak floors, hot air heat, electric light, tile and marble work. Owners are taking sub-bids.

**Garages (15)**, (12) Fifty-sixth and Woodbine avenue, (1) 5408 Woodbine avenue, and (2) 5410-32, 5434 Woodbine avenue, Philadelphia, \$18,000. Architect, private plans. Owner, Daniel Crawford, Jr., 701 North Sixty-third street, Philadelphia. Stone, 1 story,

20x22 feet, slag roof, cement floors. Owner will build.

**Factory (alt.)**, Crawford street, East of Ridge avenue, Philadelphia, \$5,000. Architect, private plans. Owner, J. & J. Dobson, Inc., 809 Chestnut street, Philadelphia. General alterations. Owners will build.

**Residence**, Tyson and Ditman streets, Philadelphia, \$4,500. Architect, private plans. Owner, John T. Casey, 101 Collum street, Philadelphia. Brick, 2 stories, 30x40 feet, slag roof, hot water heat. Owner will build.

**Residences (2)**, Rising Sun avenue, South of Princeton street, \$9,000. Architect, private plans. Owner, Louis Gebhardt, 7039 Rising Sun avenue, Philadelphia. Brick, 2 stories, 40 feet and 15x46 feet, slag roof, hot water heat. Owner will build.

**Garage**, Thirtieth and Race streets, Philadelphia. Architect, private plans. Owners, F. G. Vogt & Sons, Thirtieth and Race streets, Philadelphia. Brick and steel, 1 story, 54x146 feet, slag roof, cement floors, rolled steel skylights, roof ventilators, stone foundations (plumbing, heating and electric work reserved). Owners taking bids due November 5th. Smith-Hardican Co., 1606 Cherry street, is figuring.

**Residence**, Chestnut Hill, Philadelphia. Architect, Robert Rodes McGoodwin, 1422 Walnut street, Philadelphia. Owner, H. L. Appleton, Twelfth and Sansom streets. Stone and stucco, 3 stories, 30x56 feet, shingle roof, oak floors, metal lath, stone foundations, hot water heat, electric light, tile work, ornamental iron work. Architect has received bids.

**Residences (2)**, 1010-12 Harrison street, Philadelphia, \$9,000. Architect, private plans. Owners, Rush Bros., 1100 Fillmore street, Philadelphia. Brick, 2 stories, 16x45 feet, slag roof, hot air heating. Owners will build.

**Residences (6)**, American and Chew streets, Philadelphia, \$27,500. Architect, private plans. Owner, Carl A. Mayer, 221 West Olney avenue, Philadelphia. Brick, 2 stories, 16x49½ feet and 16x37½ feet, 13x12 feet, hot water heating. Owner will build.

**Garage**, 1104 Parrish street, Philadelphia, \$15,000. Architect, private plans. Owner, Lazarus Behrman, 1244 Girard avenue, Philadelphia. Brick, 1 story, 22x59 feet, 54x45 feet and 27x26 feet, cement floors. Owner will build.

**Manufacturing Building**, Twenty-first and William Steele & Sons Company, 1600 Parkway, Philadelphia. Owners, Steel Heddle Mfg. Co., on premises. Brick and steel, 5 stories, 94x123 feet, slag roof, composition and maple floors, metal lath, safety treads, stone foundations, terrazzo work, rolled steel sash, kalamain and hollow metal doors, iron work (heating, electric lighting and elevator reserved). William Steele & Sons Co., Sixteenth and Arch streets, taking sub-bids due November 7th.

# Use Holt Roof Connections with

## *Barrett Specification Roofs*

TYPE 1

TYPE 3

TYPE 4

TYPE 5

TYPE 6

### Any roof is Better for having Holt Connections

In fact, buildings having interior roof drainage are *incomplete* without Holt Roof Connections.

This is true because no other connection is able so well to withstand the expansion and contraction which occurs in interior leader lines.

The leader lines in the building continually push and pull, expanding and contracting with every change of temperature, or because of shrinkage, settlement or vibration, but the Holt Expansion Joint always remains flexible and watertight, because it has a range of movement of from 1½ to 3 inches, according to type of connection used and construction of leader lines and roof decks.

Holt Connections are positive safeguards against the most severe cases of shrinkage, settlement and vibration. Heavy cast brass, copper and iron are their principal components. They are as permanent as Barrett Specification Roofs, with their record of unequalled service. They are, in fact, "partners in good standing."

#### Use Holt Connections on any type of roof

Holt Connections are made in a variety of types and sizes for *every kind of roof*. They meet every need for a high-grade, dependable connection for roof leaders, vents, pipes, braces or flag poles. *They have never failed.*

805-7-9 MASTER STREET, PHILADELPHIA  
Kensington 6652 - - - Park 35**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 20, 1919.—Sealed proposals will be opened in this office at 3 P. M. November 20, 1919, for furnishing the labor required in the construction complete, with materials that will be furnished by the Government, of the United States Post Office Building at Lewistown, Pa. Drawings and specifications may be obtained from the custodian of the site at Lewistown, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Oct. 24, 1919. Sealed Proposals will be opened in this office at 3 P. M., November 24, 1919, for remodeling the United States Post Office Building at Chester, Pa. Drawings and specifications may be obtained from the Custodian of the building at Chester, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 17, 1919. Sealed Proposals will be received at this office until 3 P. M., November 14, 1919, and then opened, for new mailing vestibule and extension of driveway at the U. S. Post Office at Wilkes-Barre, Pa., in accordance with the specifications and drawing, No. 87, copies of which may be had at this office or at the office of the Custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 30, 1919. Sealed Proposals will be received at this office until 3 P. M., November 26, 1919, and then opened, for extension of mailing vestibule and driveway at the U. S. Court House and Post Office, Williamsport, Pa., in accordance with the specification and drawing No. 46, copies of which may be had at this office or at the office of the Custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 692.)

old idea that within his lot lines a man owned as far down as he could dig and as far up as he could build is being outgrown. His neighbors and the community now have an interest in the use to which he puts his property.

The arraignment against the high building, briefly stated, is that it shuts out sunlight from the street and opposite buildings, it puts the city to heavy expense in providing fire protection, water supply and sewage, it is the cause of congestion on the street, adding seriously to the traffic problem. There are also economic considerations raised by the disturbance of land values. This particular phase of the subject is ably presented in an article, "City Taxation and Skyscraper Control,"

by George L. Hoxie, in the *Journal of Political Economy*, February, 1915.

*Factors Influencing Control.*—The matter of sunlight enters prominently into any proposed regulation limiting the height of buildings. How much sunlight shall be shut from the building across the street? The altitude of the sun at noon is equal to 90 degrees—(Latitude plus Declination). From this equation it is easily found that on the 22d of December a building 100 feet high in New York City on the south side of a street running east and west shuts off the direct rays of the sun for a distance of 202 feet from the base.

Two interesting charts are given in the report of a committee of the Minneapolis Civic and Commerce Association on Limitation of the Heights of Buildings. The first shows that if the south side of an 80-foot street running east and west should be built up solidly with buildings 140 feet high, similar buildings on the north side will receive no direct sunlight below the tenth floor for a period of several weeks in December of each year, no direct sunlight below the seventh floor until after March 21st of each spring, and no direct sunlight on the first floor except for a few weeks in June of each year. The second chart shows that the twelfth floors of buildings 140 feet high on an 80-foot street running north and south have the greatest amount of sunlight—namely, five hours at the equinoxes—while the lower floors have the least amount—one and one-half hours at the same date.

The natural angle of light is 45 degrees. With this assumption a height no greater than the width of the adjoining street will not shut off light from the opposite neighbor. The code of New Rochelle, N. Y., has the provision, "No building shall project above a line of 45 degrees from horizontal, taken from the building line opposite on the widest street on which it fronts." However, with natural light and sunlight a certain amount of reflected light is obtained. Assuming this at 15 degrees, we have a 60-degree light angle, which the Minneapolis report referred to above states should be the maximum angle used in establishing heights. This allows the height of a building to be one and three-fourths times (1.73 to be exact) the width of the street.

It is evident that if light alone were considered in limiting building heights, tower buildings would be shut out. "One of the glories of New York is its towers." A scheme proposed by the architect, Ernest Flagg, limits three-quarters of every plot of land to a building height not

to exceed one and one-half times the width of the street on which it faces, with a maximum height of 100 feet. No limit is to be placed on the remaining portion of the plot. An owner is allowed to dispose of his right to build high in favor of any adjoining plot.

It has been suggested that volume be limited rather than height. A regulation worked out for the city of Houston is, "A building may occupy the entire lot to a height not exceeding the width of the principal street upon which it faces, and not exceeding in any case 100 feet. Above this height the cubage of the building shall not exceed one-fourth of such height multiplied by the area of the lot." ("The Regulation of the Height of Fireproof Commercial Buildings," by Arthur C. Comey in "Proceedings of the Fourth National Conference of City Planning.") This regulation does not seem to have been adopted; at least, it is not a part of the present building code of Houston.

In England and on the Continent the skyscraper is unknown. The maximum heights allowed in 29 European cities range from 43 feet in Zurich to 82 feet in Vienna. (Table in Report of the Heights of Buildings Commission of New York City.)

*Present Limiting Heights.*—A common limitation of heights of fireproof buildings is two and one-half times the width of the street with an absolute limit. Boston has a commission on the heights of buildings. The first commission was appointed in 1904 and by an act passed that year the city was divided into two districts. No building in district "A" can be carried to a height of more than 125 feet above the grade of the street; in district "B" the height is limited to 80 feet. The height of no building in the city may exceed two and one-half times the width of the street. The Ames building, 189 feet high, and two or three others over 125 feet, were built before the act of 1904 was in force. The litigation that arose from the Boston restriction forms an interesting chapter in legal history.

Other cities in which an absolute limit of 125 feet is in force are Augusta (Ga.), Cambridge, Charleston, Kansas City (Kan.), Houston, Manchester, Portland (Me.), Seattle, Shreveport, Springfield (Mass.), Waltham and Worcester. Kansas City and Houston reduce the limit of 25 to 100 feet if the building is used for stores, factories or as a warehouse. In Altoona no building can be more than 125 feet high "except by special permission." Columbia, S. C., has a limit of two and one-half times the width of the street, with a maximum of 125 feet, "except it be used exclusively for an office building."

In Brookline the limit is two times the width of the street, with a maximum of

80 feet. Fitchburg has an absolute limit of 100 feet, and Providence 120 feet. In Washington the height can not exceed 130 feet, "except on the north side of Pennsylvania avenue between First and Fifteenth streets, Northwest, where an extreme height of 160 feet will be allowed." Los Angeles, Pasadena, St. Louis, San Diego, Oakland and South Bend permit a height of 150 feet, though in the latter two the height may not exceed one and one-half times the width of the street.

The code of Portland, Ore., has a classification of building heights based upon the occupancy of building and the ratio of height to least dimension at base. For skeleton frames the maximum height is 160 feet and five times the least horizontal dimension at the base may not be exceeded. In Spokane the maximum height is 152 feet; in Grand Rapids and Minneapolis, 170 feet; in Baltimore, 175 feet; in Dayton, 180 feet; in Chicago, Cleveland, Erie, Indianapolis, Newark and Paterson, 200 feet; in Milwaukee, 225 feet; in New York and St. Paul, 250 feet.

Buffalo limits the height to four times the least horizontal dimension of the building, and Denver to four times its least dimension, but not to be more than 12 stories. In Lincoln the limiting height is four times the smallest horizontal dimension at the first floor level. In Seattle "the height of fireproof buildings, except as otherwise provided, shall be regulated by a successive reduction of the areas of the floors above the third floor."

The "Building Zone Resolution" of New York City, adopted July 25, 1916, provides "For the purpose of regulating and limiting the height and bulk of buildings hereafter erected, the city of New York is hereby divided into five classes of districts: (a) one times district, (b) one and one-quarter times districts, (c) one and one-half times districts, (d) two times districts, (e) two and one-half times districts, as shown on the height district map which accompanies this resolution and is hereby declared to be part hereof." As may be inferred, the width of the street is the base for determining height, although from two to five feet may be added to the height of the building for every foot it is set back from the street line. On streets more than 100 feet in width the same height regulations are in force as on streets 100 feet wide. This makes the absolute limit 250 feet, as previously mentioned.

Cincinnati, Detroit, Louisville, Philadelphia and San Francisco are among the large cities in which there is no restriction upon the heights of fireproof buildings. The code of Detroit expressly states, "Fireproof construction buildings shall not be limited in height." The

codes of San Francisco and Salt Lake City have a paragraph, "Class A buildings with all wall loads above the third floor carried on the steel frame shall not be limited as to height."

*The Skyscraper of the Future.*—In 1910 only a dozen cities restricted the height of fireproof buildings. The number has now increased to 50. Other cities will doubtless be added to the list in a few years. A dominant factor in bringing this about will probably be the desire to stabilize property values. In a large city without restriction and already having skyscrapers, the system of control to be adopted must, unless it be cruelly unjust, apply equally to the existing skyscraper and to new skyscraper construction. . . . The problem of equalizing the lot of real estate owners who have, and who have not, already put up skyscrapers is one of the most serious character." Had New York and other large cities taken hold of the subject twenty-five years ago, the situation would be far different from what it is at present. The obvious lesson for the smaller city is to ordain from the start the control that will probably be needed in its future growth. The State building code of Wisconsin will be quoted: "This code sets no limit to the height of a fireproof building, as it is felt that this is a matter of general community welfare rather than the safety of the individual occupants. The Industrial Commission strongly recommends that each municipality adopt such a limit, before the rise in central land values makes such action a hardship to the property owner."

The altruistic suggestion has been advanced that no single freeholder should be permitted to build to a greater height than would be permissible for all others to build in a similar way. If this were done, the height limit would be low, much less than the 125-foot limit of Boston. Imagine long streets banked solidly on each side with ten-story buildings! If extended over wide areas, the city would be uninhabitable. That such a condition should come to pass is too improbable to be anticipated.

However, ideal regulations for skyscrapers include limits for area as well as limits for height. A building that fully covers a lot is entirely dependent upon the adjacent streets and lots for light and air. If several adjoining lots are thus built upon there can be but an insufficiency of these essentials to convenience and health.

The city of St. Louis has recently passed an ordinance regulating the height, area and use of all new buildings. The city is divided into three types of districts—five heights districts (known respectively as the 45-foot, 60-foot, 80-foot, 120-foot and 150-foot heights district),

Tell this man your story. He spends the money. Tell him your story thru BUILDERS' GUIDE, for BUILDERS' GUIDE gives advertisers advertising efficiency.

## Perry Building, Philadelphia

four area districts and five use districts. The practical working of this latest word in city zoning will be watched with interest.

### VIBRATION PROBLEMS IN INDUSTRIAL BUILDINGS.

One of the least studied of the many industrial problems is the effect of vibration in factory buildings. In the technical publications little has been published that covers in any comprehensive manner the vibratory problems in industrial establishments, but what little has been done, however, in studying the subject has indicated the importance that is attached to the elimination of disturbing vibratory influences. Factory buildings, on account of the machines operating in them, are peculiarly susceptible to vibration, which, by acting on the nervous susceptibilities of the workers, causes reduced efficiency, poorer work, and slower speed.

Two sources of vibration may be apparent—internal or external. Vibration from internal sources results from the motions of machines or equipment, which may be transmitted to the floor and walls of the structure, while externally caused vibration is produced from sources entirely outside the building. The study of vibration and its effects, and how it may be eliminated or avoided, is a complex problem at best, inasmuch as it is difficult to assign specific causes to the effects produced or to analyze the intricate influences concerned. Conditions in factories vary to such a degree and the personal factor is so inconstant that there is a great diversity of opinion as to just where vibration begins to prove harmful. The best that can be done, therefore, is to cover only some of the more general factors associated with the subject.

Vibration of a building may have a very serious effect on workmen. If it is at all severe, the efficiency of their labor may be very materially reduced and the output will be smaller, while employees will reach a state of fatigue sooner. By taking measures to counteract the vibratory effects it has been found that greater human efficiency is possible with higher speed of workmanship and a better quality of work. Closely coupled with the efficiency of the worker is that of the machine, which is affected by vibration in one way or another. The effect on machinery is manifested in decreased output. The experiences of factory owners who have installed old equipment in new and stable buildings indicates that the output of these machines has greatly increased, due entirely to the elimination of vibration.

Factory building vibration is often responsible for waste of power and diffi-

culties with line shafting. The vibration, in such a case, results in a misalignment, which makes it impossible to keep shafting true, with the result that added friction produces a loss of power. Trouble is often occasioned, further, with crystallization of machine parts on account of the vibratory effects, for, where the machines are not cushioned, severe vibrations may result in crystallization of the metal parts and end in their breakage.

Every part of a building has a natural pitch, and, when set in motion, will vibrate at a periodic number of oscillations. The entire building, as well as its component members, conforms to this characteristic. The most harmful condition takes place when the frequency of the source of vibration coincides with the frequency of the building. When these are coincident, the action is aggravated, and may produce serious results. The effect of coincidence between the natural frequency of vibration of a floor and that of the source of disturbance is well illustrated by an experience contained in the report of the Aberthaw Construction Company, who have been conducting comprehensive investigations on the effect of vibration in structures. The case in point had to do with the testing of a small engine upon a floor of timber construction. At a speed of about 550 revolutions per minute the intensity of the floor vibration was so great that it was impossible to work in the drafting room, located on the same floor more than 100 feet away, but this effect entirely disappeared when the speed was either increased or decreased by about 50 r. p. m. If the cause of vibration be intermittent and of a different frequency, the result will be a breaking-up of vibrations.

Vibration transmitted from sources outside the building are the most difficult to trace and the most difficult to overcome. The effect of passing trains is very common, and the transmission is due either to soil and rock vibrations or to atmospheric vibrations. In regard to vibration from external sources, Mr. Maurice Deutsch, C. E., is quoted in the report referred to as follows:

"Vibrations have of late been absorbing the attention of not only scientists, but of the general public, in large cities. Since the introduction of skyscrapers, towering far above adjoining buildings, of large printing plants and power houses, diversified complaints of vibration are frequently heard. The operation of heavy bed presses and reciprocating engines leave in their path a tremor to which many adjoining buildings are so naturally attuned that the vibrations are often not only annoying, but dangerous, both to the building in which the ma-

chinery may be operating and to adjoining structures.

"In concrete steel monolithic structures, when properly designed, the entire mass acts as a unit to absorb vibrations, the main tendency being to set up an oscillatory motion of the entire structure; but this can generally be avoided if proper foundations are constructed, and if such precautions are taken in the location, arrangement and operations of the moving machinery as have been found from experience would materially reduce the possible transmission of vibrations."

Absence of vibration in industrial buildings can be attained by giving due respect to the rigidity of the structure, to foresight in the placing of certain machines on solid foundations, to the proper cushioning of others, and to such arrangement of duplicate machines operating at the same speed as to avoid cumulative effect. Old buildings are usually more susceptible to vibratory influences than more modern buildings, inasmuch as they are often unsuited to present-day requirements, and, moreover, many conditions which would receive immediate attention in up-to-date factories are often allowed to continue in old buildings.—*Architect and Engineer.*

### GREAT INCREASE IN BUILDING WORK

Permits issued at the Bureau of Building Inspection, City Hall, Philadelphia, show an increase for the first ten months of 1919 over the same period 1918 of \$30,593,425.

|                    | Permits. | Oper.  | Est. Cost.   |
|--------------------|----------|--------|--------------|
| 10 months, 1919... | 8,313    | 12,574 | \$44,700,765 |
| 10 months, 1918... | 4,366    | 5,249  | 14,107,340   |

Increase ..... 3,947 7,325 \$30,593,425  
In October, 1919, 956 permits were issued for 1,190 operations, on which estimated cost is \$4,840,005.

### HOLLOW BUILDING TILE GROWING IN FAVOR.

Hollow building tile, in common with other structural products, decreased in quantity and value in 1918, says the Geological Survey, but its decrease in value was smaller than the decrease in the value of any other structural materials except fancy brick and enameled brick, which are minor products. The output in 1918 was 1,964,000 tons, valued at \$12,980,000, which, when compared with that in 1917, 2,590,028 tons, valued at \$13,255,433, shows a decrease of 626,000 tons, or 24 per cent. in quantity, and of \$275,000, or 2 per cent., in value. Hollow building tile was used by the government in large quantities in 1918, and its greatly increased use in the future seems assured, as it is not only desirable material for use in partitions and floors in large buildings in a city, but for use in dwellings, barns, silos, and other buildings in the country.—*Ex.*

# CARTER CONCRETE

The Kind That Lasts

**Carter Concrete** PAVEMENTS, FLOORS, CONSTRUCTION—BUILT BY SPECIALISTS SINCE 1888—BUILT TO PREVENT CRACKING, CRUMBLING and DECAY—BUILT TO LAST.

CARTER PAVING COMPANY

639-41 N. 18th St., Philadelphia, Pa.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

## As The Editor Sees It

**M**ANY arguments have recently been advanced upholding the advisability of "building now." We have heard no more convincing argument than that offered by S. W. Straus & Co. of New York and Chicago, a banking concern which has been in the building loan business for years. Their argument is the very concrete one—i. e. they are willing to loan \$500,000 or more on building projects.

"We believe it our duty to advise corporations and individuals who have been hesitating to build in the face of present construction costs that it is our firm conviction that existing prices will not decline.

"In the production of building material, labor, transportation and fuel constitute, at a minimum, 75 per cent. of the cost of construction, and careful analysis of fundamental conditions show no likelihood of a decrease in the cost of any of these prime essentials.

"Added to this is a nation-wide shortage of buildings, which will require at least five years of intense activity to meet.

"For these reasons, the investment value of building now is obvious. Every consideration of self-interest and public service justifies going ahead."

\* \* \*

**B**UILDING is daily assuming a more and more important aspect, particularly in its relation to the strikes now gripping and overwhelming the country and its prosperity. No doubt the

greatest of all building needs at present is that of providing homes for workmen. In the opinion of the Southern Pine Association, a difficult though insistent problem confronting industry today is that of providing proper living conditions for workmen and their families, to insure the adequacy, stability and efficiency of labor. At hundreds of places there is need for more houses and better houses. In some centers where abnormal development has taken place the housing shortage is so acute that factory output cannot be brought up to the required volume. Community housing enterprises, undertaken along proper lines, will avoid the methods of speculative builders, and will not find their incentive in the earning of large dividends and profits to investors. While industrial housing projects should, and will if properly managed, yield a return on the investment, those financing housing companies will derive their principal gain indirectly through general community betterment, which has a distinct and tangible value. The manufacturer will, of course, be the principal beneficiary, and will accordingly bear the greater part of the housing burden, if there must be a burden. While the benefits to the manufacturer are quite generally recognized, the community benefits derived from a well-housed and, therefore, contented and self-respecting labor element, have rarely been given proper consideration in this country. An established industrial community can have no

better asset than an adequate supply of well-built, attractive homes, for the reason that it is to that town or city in which the labor supply is stable, and its standards of morality and industry in consequence high, that the manufacturer seeking industrial location instinctively turns. Everywhere that properly conceived housing program has been put into effect in a manufacturing community it has been attended by an increase in the prosperity of all the mercantile and financial, as well as the manufacturing elements of the community, and also an advance in educational and moral standards.

The importance of the education of the working men of today, and most particularly the foreign laborers, cannot be exaggerated. The man living in dirty, uncomfortable and unhealthy quarters, is an easy prey for the syndicalist and Bolshevik. A man, decently fed and clothed, in a cheerful, healthy environment, and with education enough to understand our Government and its purposes, has no grievance to air and no time to bother with radical views. In fact, according to Mr. Cyrus McCormick, Jr.'s, report at the recent National Safety Council, "65 per cent. of the strikes which have swept over Central Europe—and I am going farther west now, I am no longer referring to Russia—over France, over Germany, over Italy, have been of syndicalist origin."

It is interesting to note that Mayor-

elect Moore is promising to Philadelphia a program for better living conditions. The fundamentals of this program are to Americanize the alien by removing him from surroundings which create vice, crime, insanitation and poverty that render him an easy prey to Bolshevism.

\* \* \*

**W**E wonder just where the much-talked-of "upward trend" in prices is going to end. There seems to be no limit to the demands made by workers in this direction. High wages are, no doubt, a good thing, but there is a limit to the benefit to be derived from them. Professor King of the University of Wisconsin tells us in "Wealth and Income of the People of the United States," that:

"It would seem improbable that, with our present national productive power, any feasible system of distribution could increase the average wage-earner's income in purchasing power by more than one-fourth, and this is an extreme rather than a moderate estimate. While such a change might or might not be desirable, it would, at least, work no startling revolution in the condition of the employees of the United States. The grim fact remains that the quantity of goods turned out absolutely limits the income of labor and that no reform will bring universal prosperity which is not based fundamentally upon increasing the national income."

All of which brings us back to production. The first sign of labor realizing just what it can do to pull the country out of the mire of underproduction was evidenced by the Bethlehem steel workers when they asked for an increase of hours without any increase of pay. Such a sentiment spreading through the whole industrial fabric would soon clean up the present unsatisfactory, unsettled conditions.

\* \* \*

The formation of an engineering section of the National Safety Council has been authorized by the Executive Committee of the Council and the new section will be organized immediately by a special committee appointed for the purpose.

In announcing this action, Sidney J. Williams, Secretary and Chief Engineer of the National Safety Council, said the decision to form a distinct engineering section was prompted by three things:

First, the growing recognition of the importance of the engineering factor in safety work.

Second, the growing interest in safety work on the part of civil, mechanical, electrical, mining and chemical engineers.

Third, the growing volume of experience and investigation in the engineering problems involved in safety work.

"The formation of an engineering section," Mr. Williams said, "will provide a vehicle for concentration of the engineering brains of the several thousand member companies of the Council on the solution of engineering problems affecting safety work in large groups of industries, in specific industries and in industry generally.

"The development of the Council," Mr. Williams said, "has been largely along the lines of industrial sections. The Council now has nineteen sections each with its own officers and program and each interested largely in the safety problems of its own particular fields. These sections are as follows:

Automobile, Cement, Chemical, Construction, Education, Electric Railway, Health Service, Marine and Navigation, Metals, Mining, Packers, Paper and Pulp, Public Safety, Public Utilities, Rubber, Steam Railroad, Textile, Women in Industry and Woodworking.

The greatest contribution of the new engineering section will be with respect to problems that cut across the interests of several sections and affect whole groups of industries, as, for instance, the hazards of poisonous dust or gas. The new engineering section will also facilitate contact and co-operation between the various national engineering societies, the engineering departments of the Government and the National Safety Council.

Detailed announcement of the plans for the engineering section is attached:

In accordance with the action of the Annual Meeting of the National Safety Council on October 1st, the Executive Committee of the Council has approved the organization of an engineering section along the lines described below:

This plan does not contemplate a "Safety Engineering" Section, nor does it attempt to define the term "Safety Engineer," which has been commonly applied to all men in responsible charge of safety work. The purpose of the new section is to bring together in closer contact the civil, mechanical, electrical, mining and chemical engineers in the Council's membership, so that they may contribute more effectively towards the solution of the purely engineering problems so frequently encountered in safety work—just as the physicians among the Council's membership are united in the Health Section.

Membership qualifications are parallel to those of the great national engineering societies, except that, for the present, associate membership (without the right to vote or hold office in the section) is open to engineers having three years' experience; this will gradually be increased to six years, which is the requirement of those engineering societies having the highest standard of membership.

The details of the plan approved by the Executive Committee, on the recommendation of a special committee of engineers, are as follows:

**Membership**—The membership of the Engineering Section shall be composed of individuals who are members of the National Safety Council or who are employed by or affiliated with members of the Council, and who, in addition, have the following qualifications: Either (1) they must be members of the American Society of Civil Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Chemical Engineers, or Canadian or European societies of equal standing; or (2) they shall have had at least ten years' experience in engineering work and shall have been for at least five years in responsible charge of such work—a degree from a recognized college of engineering being accepted as equivalent to two years' experience. Persons who are members of the Council, or employed by or affiliated with members of the Council, may become Associate Members of the Engineering Section if they are either (1) Associated Members of the American Society of Civil Engineers or the other engineering societies above mentioned, or (2) if they have had three years of experience in engineering work, a college degree being given the same credit as above. Such Associated Members shall have all the rights and privileges of members except the right to vote or hold office in the section.

**Organization**—The section shall have a chairman, a vice-chairman and a secretary, the secretary being a member of the engineering staff of the National Safety Council; and an Executive Committee of not more than twenty-five, including the officers, and including at least one member representing each of the industrial sections of the Council. Among the sub-committees of the Executive Committee there shall be a Committee on Membership, with five members, which shall pass upon all applications for membership in the section. Messrs. D. S. Beyer, J. R. Brownell, A. P. Costigane, L. A. DeBlois, G. T. Fonda, H. W. Forster, E. B. Morgan, L. R. Palmer, C. E. Pettibone, C. C. Rausch, H. A. Schultz, F. P. Sinn, T. S. Stanion, C. M. Talbert, B. F. Tillson, C. P. Tolman, E. B. Tolsted and J. S. Williams are constituted a temporary Executive Committee to perfect the organization of the section.

**Functions**—The functions of the Engineering Section shall be:

(1) To help to meet the technical demands of the various industrial sections

(Continued on Page 722.)

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

**What Builders Need**

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 7, 1919.—Scaled proposals will be opened in this office at 3 P. M. December 2, 1919, for remodeling the electric freight elevator in the United States Post Office, Court House, and Custom House at Providence, R. I., in accordance with specification, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 712.)

and furnish them technical information as desired;

(2) To perform technical services for the Council, on request of the Executive Committee of the Council, such as the development of standards or participation therein; the solution, by in-

quiry or through research, of special engineering problems arising in safety work; and helpful co-operation with the American Engineering Standards Committee, the national engineering societies, the Bureau of Standards, the Casualty Department of Underwriters' Laboratories, etc.;

(3) To conduct one or more meetings as a part of the Annual Safety Congress, at which engineering problems shall be discussed;

(4) To conduct, if considered desirable, one or more additional sectional meetings during the year, or in different localities;

(5) To carry on such other activities as will, in the opinion of the Executive Committee of the National Safety Council, promote the Safety Movement and the best interests of the Council.

causes of unrest among their workmen and this is one which must be considered and remedied, or else these men through their various organizations, societies or unions, which are now developing, will bring it forcibly to their attention. Employers must do their part to make the work of their employees interesting, and salaries are not the only thing in which draftsmen are interested.

The drafting room must, first of all, have the very best system of lighting, and this should be determined in each particular case by an expert in illumination. Frequently drawings are made which require working to 1/100 in., therefore it is highly important that these men have the very best lights to avoid eye strain.

Good drafting tables should be provided and other accommodations for the men who are doing this very important work. There seems to be a desire all too frequently to economize on the drafting room equipment, hence so many common board tables on wooden horses, which is a great mistake. The saving made in the furniture and fittings is lost many times over through the discontent of the workman. Special instruments and labor saving devices are sometimes the means of considerable economy.

For general use in an office, where there is a demand for such instruments, a pantograph, planimeter, parallel rule, a set of ship curves, a calculating machine, etc., etc., are well worth the expense. In fact, a drafting room not equipped with these instruments, and particularly with drafting machines, is about as up-to-date as a large shop without automatic cutting machines or an oxy-acetylene welding outfit.

Draftsmen are too close to the executives for the latter to allow a condition of unrest or discontent to prevail. Their loyalty on the whole is without question, and since their work is so close to the office safe, so to speak, it is necessary that harmony exist between the executives and the engineering department. Otherwise the unrest may take the form of I. W. Wism or Bolshevism, which means nothing less than the destruction of all organized industry and government.

Draftsmen must do their share of the work of putting drafting on a plane commensurate with the dignity it deserves, which is equal in every way to that which engineering enjoys. There is entirely too much criticism among draftsmen. Criticism of another's work is quite out of place unless it comes in line with one's duty, and then it must conform with what is right and just. A great amount

## THE UP-TO-DATE DRAFTING ROOM

By ROBERT W. SHELMIRE,  
in *Engineering and Contracting*

Few realize the progress which drafting has made in the last generation. Even in engineering circles the work does not receive proper consideration. Thirty years ago the drafting and construction work went hand-in-hand. In other words, the designing and planning was not nearly so important a function as it is today. Projects now are thought out, designed and planned in every detail and carefully estimated before proceeding with construction. This is why drafting, which is, properly speaking, engineering, has become such a highly developed art, requiring an immense amount of technical knowledge and practical experience.

Drafting is not a trade as it was so considered years ago, because it is not physical labor so much as it is mental. Therefore, drafting is actually a profession, regardless of the fact that practically all draftsmen are employed and not in business for themselves. The profession of drafting should not be separated from engineering, because it is the engineering profession just as much as is the work of construction. It is unfortunate that the relation of drafting to engineering is not better understood by engineers and draftsmen and the public. It is a great mistake for any one to think that drafting is a menial occupation or is the unimportant part of engineering. Drafting, considered as a whole, is the most important part of en-

gineering, for it is in the preparation of the design and detail drawings that the economy of the whole scheme or structure is determined. It is the work in the drafting room that decides the success or failure of most all engineering projects.

In order, then, to correct the misunderstanding and avoid the existing confusion regarding the draftsman and his work, the word draftsman and drafting room had better be eliminated. Every one recognizes a designer or capable draftsman as being an engineer, so why not call them engineers? Likewise the drafting room, the engineering department? As it usually is so styled in most all correspondence. This to me seems the only way to bring order out of chaos and unity of thought and purpose among engineers and draftsmen.

There is considerable discontent in the various drafting rooms throughout the country which has been brought about partly through this inclination to separate the draftsman from the engineer, and partly on account of low salaries of draftsmen as compared to laborers and tradesmen. Certainly it is an unstable condition when the man who possesses the intelligence and ability to design and construct a machine receives a compensation frequently much less than the man who merely operates the machine. Employers are striving to eliminate the

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

of time is spent by some draftsmen in talking about the various "jobs" they have held and petty treatment received. If this talk was properly directed towards raising the standard of the profession, instead of lowering the dignity of the work, it would on the other hand proportionately raise it. "Jobs" and "wages" must be superseded by "position" and "salaries." Avoid the employment agency, as many of the best companies will not take men from any agency which is in business for profit. Join some engineering society which offers this service or use the U. S. Employment Bureau.

Draftsmen should mix up more with other people and not live such narrow lives, confined by the four walls of the drafting room. To make yourself known and your work understood does not mean to be domineering or arrogant. The dignity of engineering will be better preserved by being modest, but the economic status is not raised by hiding your light under a bushel.

### HEATING A BUILDING WITH WASTE AIR

That warm air generally allowed to go to waste may be profitably used in heating a large building is clearly shown by tests made at the State Hospital in Chicago, Ill., as described by the supervising engineer, Mr. F. J. Postel, in the "Heating and Ventilating Magazine." The air used in the test was that from the tunnel through which the steam pipes passed from the central heating plant. Where a group of buildings is supplied with steam and hot water from a central plant, Mr. Postel reminds us, the usual method is to carry the pipes in service tunnels. Even though the piping is properly covered, the temperature of such tunnels is more frequently over than under 100 degrees Fahrenheit, especially as the size and number of steam pipes increase. He goes on:

"The tunnels are generally near the surface; in fact, the concrete tunnel roof frequently serves as a sidewalk between the buildings. Under these conditions, it naturally follows that the heat lost by transmission through the walls, and especially through the roof of the tunnel, is considerable. The best visual evidence of this is the melted snow outlining the location of a tunnel system, even in very cold weather.

"With a view of determining the feasibility of utilizing some of the waste heat of a tunnel system in heating and ventilating buildings, the following experiment was made:

"At the Chicago State Hospital there is quite an elaborate system of tunnels connecting the various buildings on the grounds. The south end of this tunnel system is new and at present contains only a high-pressure steam line and a heating return line, the other service piping not having been installed as yet. The temperature in this new tunnel is, therefore, considerably lower than that in the remainder of the tunnel system and is undoubtedly lower than the average temperature usually found in tunnel systems. However, due to the fact that one of the newer buildings served by this tunnel had a blast system already installed and that it was a comparatively simple matter to arrange the fan to draw its air supply from the tunnel instead of from outdoors, we selected this building for the test.

"The building is designed to house about one hundred patients. There are a large dormitory and a day-room on the first floor and two dormitories on the second floor. The solarium at the south end of the building and the toilet rooms, attendants' rooms, and the single rooms in the center of the building are heated by direct radiation, while the day-rooms and dormitories are equipped with a blast system, in addition to direct radiation. The blast system has not been used for several years, the day-rooms and dormitories being heated entirely by direct radiation and ventilated by open windows. In the test the direct radiation of the day-rooms and dormitories was shut off entirely and the rooms heated by the blast system alone. The air was discharged into the room just as it was drawn from the tunnels, without reheating.

"As the object of this test was primarily to determine how hot the rooms would get under certain outside temperature conditions and with a certain drop in tunnel temperature, no attempt was made to regulate the temperatures. . . .

"All the air used in the test was heated from the outdoor temperature by passing into the tunnel at the skylight and through the tunnel to the building, absorbing heat from the tunnel walls and pipe and from the exposed tank and piping in the basement of the building. . . .

"The introduction of tunnel air into the rooms resulted in a material increase in humidity. This may be accounted for by the moisture absorbed by the air in passing over the damp tunnel walls and by the steam escaping from expansion joints in the steam line, which probably were not absolutely tight. . . .

"The tests show that the air conditions

were quite satisfactory, especially considering the condition of the tunnel and the rather crude method of getting the air from the tunnel to the fan inlet. . . .

"The test proved conclusively:

"1. That it is entirely practical to heat and ventilate buildings with waste heat from a tunnel system.

"2. That with even a small amount of hot piping in a tunnel system insulated in the usual way, there is still sufficient waste heat to make its utilization well worth while.

"3. That if the tunnels are kept reasonably clean, the air conditions in the rooms may be maintained at a high standard of purity.

"It follows that as the temperature of the tunnels is decreased by this method, the heat loss through the tunnel walls and roof is decreased proportionately, and to this extent it represents a direct saving.

"Carrying this plan to its logical conclusion, it would appear that the limit to which we may safely go is reached only when the temperature of the tunnel gets down near the freezing-point. . . . The heat transmission through tunnel walls and roof is a direct measure of the heat wasted and this becomes a minor waste if the tunnel temperature is, let us say, 40 degrees Fahr.

"What this saving may amount to in the larger institutions is shown by the fact that, based on the results of the above test, plans are now being made to heat four buildings similar to the one used for this test at the Chicago State Hospital."

### A COTTAGE BUNGALOW

One of the most popular types of houses in America is the cottage-bungalow. True enough, the bungalow style has suffered somewhat from its so-called friends, and for a while it appeared that the activities of the "jerry" builder were destined to place anything which came under the head of "bungalow" in the undesirable class. Then, too, there was the "bungalow bug" who "lifted" bodily the type of bungalow designed for the climate of semi-tropical California and set it down on the bleak prairies of the Central West or in the snows of the long winter of the Northern or Eastern States. These abuses finally had the effect of discrediting the style to such an extent that many people considered that no one in his right mind would build or buy a house of the bungalow type.

By means of the numerous articles on the design and construction of homes which are constantly appearing in the

newspapers and in almost all of the magazines, the average man is gaining a considerable amount of practical knowledge about building. In many cases he is capable of recognizing the earmarks of shoddy materials or cheap workmanship, and his taste is being improved to the extent that he is not likely to favor any attempt to give him a design that is not suited to the climate or locality.

This education of the general public has resulted in making it increasingly difficult for the "jerry" builder to find a market for his claptrap houses, and is also eradicating the "bungalow bug." These two handicaps being lessened, the possibility of the bungalow type is again being generally recognized as offering something worth while in the way of design.

The true bungalow is, of course, a one-story affair; the cottage-bungalow is usually a story and a half, or in rare cases a full two-story house. The cottage-bungalow derives its name from the

fact that it combines the cottage type of interior arrangement with the exterior appearance of the bungalow. For a given amount of floor space the cottage-bungalow is more economical to build than is the true bungalow. It requires less foundation work, less roof surface, is easier to heat, and usually permits a better arrangement of rooms in so far as light and ventilation are concerned. The bungalow seems naturally suited to mild climates, but the cottage-bungalow is more practicable and satisfactory for colder localities. Much of the charm of California bungalows is due to the wealth of flowers and vines which surround them throughout the year, and any attempt to copy one in a colder climate where the vegetation is replaced by snow and ice throughout the winter usually proves unsatisfactory. In capable hands, however, the cottage-bungalow type may be designed so that it will be entirely satisfactory, both in its practical features and in its appearance.—*National Builder*.

#### PERCENTAGE METHOD.

One builder's method was quite interesting. He figured up closely upon the main items of the building, as the brick work, the lumber, mill work, etc., and took bids from subcontractors, and then figured the rest of the work upon percentages. For instance, painting would be a certain per cent. of the mill work; hardware a percentage of the mill work, and so on throughout the list. It is interesting to note that this man is known among his competitors as an erratic bidder, yet a man who has been fairly successful. At times his bids are low and other times quite high.

#### BASED ON MATERIAL MEN'S AND SUBCONTRACTORS' ESTIMATES ON LISTS SUBMITTED.

Another builder made lists of all quantities of work and submitted them to material men for prices, and to subcontractors for their estimates. With these prices and bids he then made his own estimates, reducing the subcontractor's estimates that he figured as being high. He considers these figures as cost, and when he has added them all together he decides upon the percentage to be added. This percentage is based upon how close he thinks his itemized figures are to real costs. Thus the percentage covers his real profit and a per cent. to take care of contingencies and under-estimating.

#### LETS MATERIAL MEN AND SUBCONTRACTORS TAKE OFF QUANTITIES AND GIVE ESTIMATES.

One builder had the material men and subcontractors take off their own quantities and name prices to him. He takes the lowest of these, estimates the labor items of his own forces, and adds all of these together, adding his profit to these figures. This contractor is known as one who may make a good profit on some jobs and poor on another, due to the fact that material men and subcontractors give him much trouble by omitting items, and contending they did not agree to do certain work or furnish certain materials.

#### GIVES LISTS BUT ALSO REQUIRES MATERIAL MEN AND SUBCONTRACTORS TO TAKE OFF THEIR OWN QUANTITIES.

One other builder not only requires material men and subcontractors to take off quantities, but he also furnishes lists to them, stating that these are the items upon which their figures are based. Thus he has a check upon them and their prices. With these as a basis he estimates actual costs on his own work. Upon the total thus obtained he figures a profit.

This contractor is very successful, not only in obtaining a large number of con-

## HOW SHOULD AN ESTIMATE OF COST BE MADE

By DANIEL J. HAUER, C. E.

"I have figured on more than 20 jobs this season," says a builder, "but have only gotten one or two contracts. Figures are all too high."

Unless the proper estimates are made when bidding, jobs can not be secured. There is always the chance that some builder has bid too low, due to inexperience in certain lines of work, or has made an error in his estimate, but in most cases a low bid does not mean a money loss to the successful bidder, but rather that he has estimated closer than the others, either by having a better knowledge of the work that is to be done, or a better method and system of estimating.

#### SUCCESSFUL BIDDING.

Successful bidding, as well as the successful carrying out of building contracts, must be based upon the knowledge and ability shown in estimating. There are many ways of making up estimates, and the fact that half a dozen builders may bid upon a building and their prices all be within 1 or 2 per cent. of one another shows that varying methods of estimating bring surprisingly close results. On the other hand, it is evident that when one or two bidders are 10 or 15 per cent. lower than a large group of bidders, and one of these low bidders receives the contract and makes money on the job, that this bidder's method of es-

timating must vary from the others, and be done along better lines.

#### RESULT OF A DISCUSSION.

This subject recently came up for an informal discussion among some builders and architects in one of our large Eastern cities, and the information on bidding as brought out may be a help to others.

#### LISTS OF ITEMS.

All agreed that the first thing necessary was to list the various items of cost, as plans, survey, bond, insurance, workmen's compensation, permits and other general items of expense. Then the list of work, whether done by the contractor or subcontractors, must be gotten up; such as excavation, concrete, brick work, lumber, mill work, stone masonry, hardware, roofing, painting and glazing, plumbing, heating, and so on through the long list. Some of the builders had printed lists on regular estimating sheets. Thus for every building every item could be checked off, whether used in the building or not, thus preventing any class of work being overlooked.

One of these lists is reproduced in connection with this article.

With this list checked off and quantities for each item taken off the plans, the real work of estimating begins.

Tell this man your story. He spends the money. Tell him your story thru BUILDERS' GUIDE, for BUILDERS' GUIDE gives advertisers advertising efficiency.

**Building News Publishing Company**  
Perry Building, Philadelphia

tracts, but also in the profit he makes upon the year's work.

#### ANALYSES OF THESE METHODS.

It can be seen that in these various methods of estimating, that one builder has a number of chances of losing money or else his prices may be too high. This is due to the fact that he figures upon averages and percentages.

The second builder is not accurate enough in his detail estimating. Thus he may get one job that has been figured close, but a second figured liberally (to which is added a percentage for contingencies) he loses by being too high. Contingencies mean that one lacks either the information of the details of a job, or the general knowledge of a business to make a real estimate of cost. In one case his estimate may be the real cost, in another it may be too low, while a third may be cost plus a profit. To add a percentage for uncertain features and an additional profit means to bid too high a price against a careful and accurate bidder.

The third contractor likewise has uncertain features in his estimating, so that he has much trouble and fails to secure many jobs.

The last-mentioned bidder, first of all, has checks and safeguards upon his estimate. He figures cost only to himself. Thus, although the material men and subcontractors have profits in their prices, yet these figures are costs to the builder. With these as a basis he has only a few items upon which he must estimate. One will be the labor of framing and placing his lumber, the placing of mill work, and a few other materials. These items will seldom run over 10 to 20 per cent. of the entire building. Thus he has reduced his estimating of costs to the minimum, and if these are figured without profit, he is not duplicating his profits when he adds one to the entire job. His figures can be safe, yet low, and he will secure jobs on which the other builders have estimated too high.

#### ACCURATE DATA THE SAFEGUARD IN ESTIMATING.

The best practice in estimating means that the data upon which the estimate is made must be accurate. The results thus obtained are bound to be gratifying to the estimator.—*National Builders.*

#### CONCRETE FLAGPOLE POURED IN PLACE

The unique construction of a 70-foot concrete flagpole in front of the Ancon Hospital Group at Ancon, Canal Zone, is described in the *Engineering News-Record*. In order to avoid the placing of complicated reinforcing steel to take the

handling strains, as well as the strains after erection, and the cost of erecting, it was decided to pour the pole in place. Stability was secured by using an enlarged base, which extended 10 feet into the ground. The pole is 17 inches in diameter at the base and 8½ inches in diameter at the top. It is reinforced longitudinally with eight square bars decreasing in size from 1¼ inches at the base to ½ inch at the top, and also has circular or hoop steel. The complete ratio of steel to concrete at the base is 0.055.

In its construction a light tower similar to a hoisting tower was first erected, and the forms for the pole, which were made of wood in eight sections, were erected inside this tower. The forms were fastened to the latter after having been plumbed by the use of two transits at right angles to each other. The steel was erected for the entire pole at one time, but the forms were only placed at the rate of one section per day. These were made in longitudinal halves, and were placed about the steel, and then filled with concrete with buckets. The mix used was a 1:1½:3, and a float finish coat was applied immediately after the forms were removed. The pole proved to be satisfactory both in cost and appearance.

#### DENVER'S PLAN FOR SETTLING DISPUTES

Denver, Colo., has developed an idea which ought to work for peace and harmony at a time when these things are at a premium, for its local Building Trades Council and the Master Builders' Association have agreed upon a plan for settling disputes. In the event of a disagreement which cannot be settled otherwise, it is to be arbitrated by a council of conciliation, made up of an equal number from the employed and the employment organizations, and if this council cannot agree it will refer the matter to a single arbiter, whose decision shall be final.

There are twenty-two trades represented in this agreement for arbitration.

#### THE CONCRETE FLOOR

Concrete is largely used as a floor material for garages, factories and mills, and gives a surface easily cleaned and impervious to water.

There is, however, one serious objection to this type of floor. When the floor is subjected to wear, there is a tendency toward the "dusting off" of the cement particles, and these particles floating about in the air are injurious to the health of employes and a menace to the working parts of delicate machinery.

The use of a proper protective coat-

ing, however, will readily overcome this objection. First see that the floor is perfectly dry and then apply a brush coat of concrete floor first coater. This will seal up the pores and stop the suction. Allow this coating to dry twenty-four hours and follow with two brush coats of concrete floor paint, allowing forty-eight hours for drying between coats.

If the floor is subjected to unusual wear, a final coat of good floor varnish will add materially to the appearance and durability.—*Exchange.*

#### BETTER FOREMEN

For those who are interested in the development of better foremen on construction, there is now in the course of preparation in the Department of Labor, Washington, D. C., a document dealing exclusively with hints and helpful suggestions to foremen which will soon be available.

At the present time there is available in the same department more than a dozen pamphlets on shop and contract management problems which will be sent to anyone on request.

The lumber cut for September, as reported by the eight principal lumber-producing associations, was 906 million board feet, compared with 898 million feet the previous month, while shipments were only 761 million feet, compared with 845 million feet the previous month, and orders booked during the month totaled 618 million feet, compared with 688 million feet the month before. The War Department has announced that it has practically no lumber to sell and the decline in orders in the face of such an announcement, coupled with the heavy building operations under way, would indicate a hesitancy on the part of buyers probably looking toward lower prices. The smaller shipments were largely due to transportation difficulties.

#### PERHAPS HIS NAME WAS BILL.

Oh, contractor, come build my house,  
Come, build and build and build.  
Alas he came and built my house  
And billed and billed and billed.

—*Architecture and Construction.*

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—*Thoreau.*

CARTER PAVING COMPANY

639-41 N. 18th St., Philadelphia, Pa.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

## As The Editor Sees It

THE recent strike of the coal miners and the Bolshevik outbreaks throughout the country have served a useful purpose, namely, that of stirring the public to action. Americans are slow to act and are prone to follow the path of least resistance, but in an emergency they rise to the occasion. No one could demonstrate this fact more forcibly than did President United Mine Workers John L. Lewis, when he had the courage to say:

"Gentlemen, we will comply with the mandate of the court. We do it under protest. We are Americans. We cannot fight our government. That is all."

Such action was indeed a victory—a victory for the people of the United States of America, but, most of all, a victory for labor and the labor unions. All honor due the man who could so stand by his principles and his government. In the opinion of Franklin D. Roosevelt, Assistant Secretary of the Navy, we celebrated on Armistice Day "not only the first anniversary of the ending of the great war, but the day on which we triumphed for the ratification—not of the Treaty of Peace—but the ratification of American citizenship. Since the day on which the armistice was announced, we have felt that the national danger had not passed and we have passed through days of peril, as great as that experienced in the international conflict. But American good sense and American independence have triumphed; American

good citizenship has been victorious.

"But I believe that the United States Government cannot stop with the end of the coal strike. We dare not say our troubles are over. We do not wish to 'pass the buck' to future generations and the government—not only the administration, but Congress—will not sit back and wait until something else occurs.

"We must recognize the fact that men and women employed in occupations essential to the public welfare have a different status than those engaged in private employment. A new relationship must be realized between the employee and the employer, on the railroads, in the mines and in the public service corporations.

"It must be understood that such workers owe a duty to the people. But it is equally plain that the people owe a special duty to them. In taking away a right it must be recognized as obvious that those who have suffered an injustice or have a grievance shall have recourse to courts of justice.

"Before we become many years older the government of the United States will create special tribunals—not merely boards of arbitration—but courts with authority to enforce their decrees; courts of equity and justice to settle these controversies."

Surely the time is ripe for these principles to be crystallized into action. Labor has recognized the paramount importance of the public good; let the public

now realize how much the "welfare of the public" hinges on the welfare of the great laboring class—the two are interdependent; the common good depends on the welfare of each and every individual class.

In the words of the Cincinnati Enquirer: "The essential characteristic of the good citizen in a democracy is to be able to merge his individual, or class, interests in those of the mass. He surveys the whole field of the national life and cheerfully sacrifices himself and his welfare for the good of all."

The thought was amplified by William B. Colver, member Federal Trade Commission, in the opening sentences of his address at Atlantic City, N. J., November 14:

"I do not like to think of the Federal Trade Commission as an agency of government devoted to business, nor to any other subdivision of the public," said Mr. Colver. "In the President's Cabinet the public interest is subdivided and each is specially represented. But Congress clearly intended the Federal Trade Commission to function, solely, in the interest of all the public. If it shall do this faithfully, fearlessly and well, it will do far more for American business, whose welfare is the general welfare, than if it shall assume to be the special pleader for or the champion of business.

"The public interest! The general welfare! The common good!

"These are the very cornerstones of

**DRAWING  
MATERIALS**

our government. Next come the guarantees of individual life and liberty and the pursuit of happiness and the protection of the ownership of private property.

"But individual liberty is only to be enjoyed up to the point where it encroaches upon the liberty of another. The individual may forfeit not only his liberty, but his life to society. Property rights yield, also, through taxation or the exercise of eminent domain when the higher right—the general welfare—is involved.

"For years we have seen the growth of organized subdivisions of the public. Such organization is proper and to be encouraged—but only to the point where an invasion of the general welfare, the public interest, is threatened.

"Capital has been encouraged to organize into corporations so that larger business units might be created. But when these giants began to combine into trusts the public interest was threatened, and a contest between public and private interest has been waged for over forty years. There is no objection to size—as such—but no part of the nation may be permitted to be more powerful than the whole.

"Labor was encouraged to organize by trades and crafts, and these have united in the common interest of the wage-earner. As in the case of organized capital, there can be no objection to the mere size of such combinations; none, unless the general welfare, the public interest, is threatened.

"We have just fought the greatest war in history to the end that the world may be safe for democracy. That is, that a rule of right and of reason may be substituted, internationally, for the rule of might and of force.

"Shall not the same end be served in our domestic affairs? Shall great business concerns be permitted, in order to find investment for unwieldy surpluses, to ruthlessly invade other and unrelated lines of business, and to trample the peaceful traders in the market place like a herd of mammoths?

"Shall a public service corporation—as in Toledo—be allowed to call its rolling stock out on a general strike without regard to the public interest or the general welfare and comfort of the owners of the streets of that city?

"Shall the organized wage-earners, who constitute so great and so important a part of the public, for a moment disregard the greater welfare of the public of which it is a part?

"During the war each was ready to contribute his property, his services, his very life, to the common cause—the general welfare, the public interest. Imbued by such a spirit America was invincible. Shall we go back to a struggle—a civil war—between great business enterprises

and smaller ones? To a primitive warfare between employer and employees? To a guerrilla warfare between producer and consumer? To a division into armed camps as to farmers and city dwellers? It is unthinkable.

"We have shown the world what an army of the soldiers of freedom, backed by the labor, and capital, the arts and industries, and the genius and resources of a free land, united, can do. Shall the armies, the divisions, the brigades, the units and the individuals of America united now turn against each other? It cannot be. The public interest is paramount. The public interest is supreme. The ills and hardships of any subdivision or class can safely be trusted to be solved in the public interest. The court of public opinion can not be orderly and sane in its judgments if it is a bedlam filled with the cries of contending parties. Let us have peace in the court of public opinion. Let each submit himself to the judgments of that high court—for if we do not, and if the public interest is subordinated to any or several special interests, then the law of the jungle will be the law of the land, and liberty and justice will be fugitives hunted by organized bands of madmen.

"Organized capital; organized labor; organized farmers; organized landlords; organized tenants; and organized everything and everybody, can and will be useful in our national life so long as they function solely in and for the public interest.

"Organized selfishness? Never!"

\* \* \* \*

CONGRESSMAN George Holden Tinkham, Massachusetts, who is responsible for House Resolution 7014, which provides for the creation of a Bureau of Housing and Living Conditions in the United States, said recently in behalf of his bill:

"Revolutionists and Bolsheviki who desire and intend the destruction of modern society do not own homes. They have no fixed interest in the social order and nothing to protect from destruction.

"The relation between labor and housing is vital. Good living conditions and good housing conditions especially promote better citizenship, increase productive capacity and reduce labor turnover. The desire for a home next to the desire for food is one of the deepest of human instincts. The national government should interest itself particularly at this time in this great social and industrial problem.

"Under the terms of my bill the proposed bureau will be charged with investigating the housing and living conditions of the industrial population of the United States. The bill provides for research and experimentation by the bureau with a view to the provision and publication of information to make economic-

ally practicable the elimination of slums, the improvement of living conditions, the reduction of the cost of construction of dwellings and the financing of extended home building operations without Federal appropriations. It will furthermore assist communities in making available to the utmost extent all existing housing facilities and serve as a clearing house of information on housing and living conditions.

"The Federal Government as a result of its war housing program, in which was expended approximately \$110,000,000 to build homes for industrial workers, has accumulated a vast fund of information and experience in this connection which should be made available to every community in the United States. At the present time no government bureau has power to make this material available. My bill, if enacted into law, offers the Federal Government the greatest possible opportunity to make practical use of information gathered at a tremendous price in war times.

"The problem is a national problem and an urban one, due to the rapid expansion of the urban population in which the whole United States, which is increasing at a rate three times greater than that of the rural population, 46 per cent. of the whole population being urban in 1910 and there being but little doubt that the 1920 census will show more than 50 per cent. of our population living in cities. Before the war, due to this rapid expansion, there was a shortage of homes, which was greatly augmented by the sudden cessation of building during the war.

"The normal peace time expenditure in the United States for workmen's houses has been estimated at \$1,000,000,000 a year. In 1917 the expenditure for this purpose were only 10 per cent. of this amount. This deficit is further being rapidly increased at present by the very high cost of labor and material as well as the difficulty of obtaining mortgage loans. It was estimated some time ago that there was a shortage of more than one million homes in the United States. Every community is seeking the best possible means to relieve a situation more acute today than ever. The national government has distributed land to homesteaders in the rural districts and has established Federal Land Banks for the financing of the farmer. Many departments of the government have bureaus which study and publish information regarding a multiplicity of subjects much less important than the subject of housing and living conditions.

"The United States is thus far practically the only country engaged in the war which has not taken definite steps to relieve the vital housing problem and

(Continued on Page 742.)

### Keep a Photographic Record of the Work You Do

A photographic record is complete, authentic and permanent.

Record of your work compiled from photographs taken and finished by a competent photographer will furnish a complete history of the building from inception.

To be sure of rapid service, clear and permanent photographs for your record, choose a firm that has had extensive experience in serving architects, contractors and the building trades.

**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how,  
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

(Continued from Page 732.)

to study living conditions in urban communities.

"There is no reason why there should be further delay and every reason why my bill should be acted upon at the earliest possible moment."

Building is one of the most noble professions in the world. You are doing something useful—vital—for the world when you build good, honest, permanently substantial, architecturally attractive, really useful buildings.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

# POPULAR IGNORANCE OF THE ARCHITECTS' PROFESSION

By J. C. NIEMEYER, *Architect*

First of all, let us consider the meaning of "profession." The book of Webster says it is a vocation, and in order to get a clearer definition, we refer to "vocation," and find that it is a calling or trade. There are some people who will call on a physician regarding their physical well-being or a lawyer to solve their legal problems, yet when it comes to the planning and construction of a building they hesitate to consult the professional man who can solve the difficulties to be encountered and diagnose the case and prescribe the proper remedy.

A small party or a summer day picnic is scarcely encountered that has not been planned and carefully studied. Too many consider the architect as a mere representative whose principal work is to see that the contractor follows the specifications and does not cheat the owner. We feel, though, that opinions along his line are changing and that the owner is beginning to see that the experience and training of the architect is an absolute necessity for the successful construction of any building from the time of the sketches to the entering of the tenants.

There was never a set of plans so carefully drawn that points did not arise in the course of construction requiring interpretation either by their author or his representative. Also, there are many things that arise which could not be foreseen and often changes can be made to advantage. The necessity for seeking the services of an architect is simply recognized as good business by owners everywhere, even by those of the most limited foresight.

Every owner should study the specifications carefully, and the points that he does not understand should be made clear. He should realize very positively that a dollar will buy a dollar's worth of material or a dollar's worth of labor, and that he is not fairly and justly entitled to more than his money's worth. When bids show that the cost exceeds the preliminary estimate (and it is very difficult under existing conditions for an architect to make a close estimate) the owner should make up his mind definitely to one or two things—that he is going to pay more money than he anticipated or that he is going to save money by the process of elimination, either by reducing size or by cutting features from the building, and if these eliminations

are made he must make up his mind also that the building will suffer correspondingly. An owner who has an exaggerated idea of what he is going to get for his money is preferable to the one who cherishes false ideas. For their own sakes, architects should put a damper on dreams that are impossible of realization. Sometimes a tendency exists to paint facts in rosy colors in order that a job may be landed. On the other hand, the public has to become educated to the fact that the building game is not a bargain counter sale and there are but a very few bargains—it is an even exchange. Seeking bargains is the cause of greatest disappointment in the end, because the source of unscrupulous methods is very evident in the cheap constructions.

Progressive architects start with a design which contemplates a structure really worthy of themselves and the owner, but too often the hinges which the owner thinks he can get along without are lopped off one by one until all that is left is a structure plain, uninteresting, inefficient, serving the purpose neither of beauty nor utility, and he mourns over the lost ideal. Do not practice false economy.

Every house has a monetary value. As a home for its present owners it may be far removed from consideration of price, but the change of fortune might throw it on the market in a day, and it is worth while to remember this and so build it that it will be marketable at an advantageous figure if such contingency arises. The architect is the man to point out these things in the beginning. It will be too late when the crisis actually comes. Urge the clients to build well, show them the advantages of putting in all modern conveniences. Some of these things may look like luxuries today, but tomorrow every house will include them as a matter of course. Stimulate their pride to build ahead of the times. Let us consider our building as an organized creature, in coloring which we must look to the simple and separated organized things of nature. Our building if it is well composed is one thing, and is to be colored as nature would color a shell, a flower or an animal. It is absolutely essential to have a first-class set of plans and specifications to get satisfactory results. You may hear rumors that the better plans and specifications very clearly detailed and written will increase the cost of construc-

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

tion. How absurd that statement! The clearer the plan and specification the less misunderstanding of the work; as a matter of fact, the plans and specifications are used merely as an interpretation of the work during the absence of the architect from that work, as it would be too costly to keep an architect on the job continually and also a tedious occupation. A good architect will tell you that he cannot put too much on a plan and specification, because in case of dispute it is down in black and white and thereby no cause for misunderstanding and substitution. There are three phases of construction that are used in present day practice, viz.:

First. The contractor that builds without plans or specifications simply following the owner's choice of duplicating some built structure. These contractors are making the most money and you can readily prove this statement by investigating the wealth and retirement after a number of years of contracting. Why shouldn't they make money? They have matters in their own hands and can apply or substitute materials, foreign to the owner, at their own discretion, as the market suggests, and in case of dispute who can arbitrate such a case? It immediately becomes a deadlock. Such cases of dispute are usually settled by legal procedure and expensive court costs. It can be said candidly of any such structure, with few exceptions, that the fees of an architect have been paid for many times over.

Second. The construction of dwellings or buildings where plans are furnished by the contractors themselves. These plans will be found quite incomplete and usually to the satisfaction of the contractor who pushes and recommends qualities and installations which net him the most. In cases of dispute or misunderstanding the plans are so vague that they are no better than none and are simply dimension guides. These methods, too, are found to be quite profitable to the contractor and an investigation will reveal their profits.

Third. The construction by the use of a competent set of plans, specifications and supervision, and by general contracting. By the constant attendance of the architect and the co-operation of the general contractor, owner and architect good results will be obtained and invariably a legitimate profit is made. This also bears investigation. If the results are not satisfactory it may be due to the delinquency of the architect.

There is still one item which should be mentioned, and that is of changes during construction. If the owner, through no fault of his own, is not gifted to perceive the finished work from the blue prints

and finds changes necessary for his satisfaction, he should not be obliged to pay a profit of from 25 to 100 per cent. because of such change, as is quite customary under general contract practice. This should be governed by unit prices and the owner should only pay a just amount for such change. The general contractor is entitled to a fair profit as to the work involved. This is eliminated to a very minimum degree under the separate contract plan, as the owner deals directly with the architect and separate contractor for such change and pays only for such work and material necessary.

Another item to observe in construction is system and bookkeeping. Should an owner ask the general contractor during construction to see his books, and his reply would be, no. Why? Is it not a fair question to ask where one's money is being spent and how? Then the question of bonds arises. A bond is a protection in a sense, but in most cases when there is resort to it, it proves verely unsatisfactory and the necessary procedure of settlement then is the court, which is costly. By doing work through the separate contract plan the owner is directly contracted to the contractor and need not pay for any materials or labor until certified by the architect and properly executed and materials paid for. He needs no bond to guarantee the payment of bills.

Another question arises, that of buying homes already built. The fact that there is a ready market at all times is very evident. When buying ready-built places do not depend too much on your judgment and consider the future of the building. Many a poorly constructed building has been covered by a good coat of paint or varnish. The two main parts of a building are the foundation and roof. Further, as it is customary for architects and contractors to use a list of estimating, such a list would be commendable in buying also; especially when unaware of the requisites of completeness. When buying do not be persuaded by talk, but by facts, and be quite sure you are getting them complete. There being statements that no salesmen are needed to sell homes bears out the fact that 100 per cent. face values need no salesmen but a skeptical purchaser has to be shown where the money has been spent and value received.

Then ask yourself, can I buy as cheap as I can build? Get competitive figures and see for yourself. In regard to stock plans there should be a law preventing such a practice, because it is very detrimental to the civic pride and a retardant to any community. It is false economy because invariably one can have a change

of exterior for the same interior without added cost in the construction. The mere fact of trying to eliminate the architect's fees is only retarding his skill and a severe obstacle to progress.—*The Architect and Engineer.*

## TRAINING IN ARCHITECTURE

To practice the profession of architecture involves practice in one or more of its three separate fields—business, engineering and art.

To exist, a firm of architects must get business. Some one must have his ear to the ground to discover who is proposing the erection of a new structure. Some one must keep tab on construction reports and visit distant cities for prospective work. Architects must enter numerous contracts, make and supervise numerous specifications, prepare estimates of cost, inspect work during construction and reject defective work, pay and receive various sums of money and keep exact records. Evidently business ability is an essential element in the firm's maintenance of existence.

If a building fails in strength or develops defects the architect is blamed. If buildings are too heavy the architect is reducing business, as owners will not build if they cannot receive a fair return on the money invested. Conveniences are required in the way of lighting, ventilating, heating and proofing against fire, the transmission of sound and vibration that require the designer to have a knowledge of chemistry, heat, light, sound, electricity, strength of materials and sound building construction. These are engineering subjects when applied to important structures.

Writing on the subject in *Building Review*, Mr. W. H. P. Creighton, Dean of the College of Technology, Tulare University, says:

"A really successful structure is one pleasing to the eye when viewed from the exterior or interior. While it is true that what pleases one person may not please another, artistic success must mean pleasing those most competent to judge. The artistic setting, proportions and appearance of buildings is the province of the artistic member of the firm. Simply because a young man has failed in a number of lines of endeavor does not mean, however, that he has an artistic temperament and will make a successful architect.

"An architectural firm must do enough business to support all the members of the firm. Ideally it should contain a business man, an engineer and an artist. Where there is only enough business for

two, the firm is composed of an outside and an inside man. Where the firm has only one member, he must be the outside man and engineer, since the securing of new business and close supervision of work during construction are essential elements to the existence of the firm. He will at the same time supervise the artistic designs. The inside work is then carried on by employees whose work is supervised from time to time. In emergencies, caused by sickness or shortage, the boss must also do this work.

"The above details are given to indicate the vast difference between the training necessary to produce a high grade architect and that for a draftsman. It shows that the training of an architect should rest on a broad foundation that includes languages, mathematics and sciences, as well as drafting and designing."—*Architect and Engineer.*

The Building Trades Employers' Association of Philadelphia was organized last week by representatives of employers of twelve different trades engaged in building construction. About 125 men were present and forty-eight applications for membership in the new organization were signed at the meeting. Edwin L. Seabrook, secretary of the National Association of Sheet Metal Contractors, was chosen organization chairman; William M. Anderson, a master plumber, was elected treasurer, and M. G. Sellers, temporary secretary. The next meeting will be held November 25, when by-laws will be adopted and permanent officers elected.

The purpose of the organization is to strengthen the position of the subcontractors and material men in building construction with regard both to labor and the supervising contractors. Plans will be drawn up by the permanent organization for information on credit matters, protection from unfair contracts, and for more uniform conduct of business in all the branches of the building trades.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

## STATEMENT CONCERNING THE ORGANIZATION AND PURPOSES OF THE CONFERENCE ON COMPREHENSIVE CITY PLANNING AT PHILADELPHIA, PA., NOV. 10, 1919

At the invitation of the Engineers' Club of Philadelphia under the date of September 17, 1919, delegates from some 35 civic agencies and city departments met at the Engineers' Club on October 10, 1919, to consider the provisions of Article II, Sections 9 and 10 of the new city charter wherein it is optional with the new administration to create commissions in city planning and zoning. Following a discussion of the urgent necessity for such a commission, a resolution was adopted in which the assembled organizations urged the creation of these commissions and pledged support to the city administration in securing the prompt and efficient functioning of these commissions by encouraging and stimulating interest on the part of the public in civic developments.

It was decided to hold a public meeting at Witherspoon Hall on November 18, 1919, to create a permanent federation of those organizations represented and other allied organizations to constitute a body at all times ready to co-operate with and support the proposed commissions, or any other agencies existing for the betterment of the city of Philadelphia.

The following organizations accepted the invitation to send delegates to the initial conference:

Art Jury  
Automobile Club of Philadelphia  
Board of Education  
Board of Trade  
Building Trades Council  
Bureau of Municipal Research  
Chamber of Commerce  
City Club  
City Parks Association  
Civic Club  
Department of City Transit  
Department of Public Health and Charities  
Bureau of Building Inspection  
Bureau of Surveys  
Department of Wharves, Docks and Ferries  
Engineers' Club of Philadelphia and Affiliated Societies  
Fairmount Park Art Association  
Maritime Exchange  
Master Builders' Exchange  
Octavia Hill Association  
Philadelphia Chapter American Institute of Architects  
Philadelphia Real Estate Board

Philadelphia Housing Association  
Philadelphia Fire Underwriters Association  
Philadelphia Operative Builders Association  
Playground Association  
T-Square Club  
Whittier Center  
Zoning Commission

At the initial meeting, Mr. J. A. Steinmetz, President of the Philadelphia Engineers' Club, was elected temporary chairman with power to appoint working committees. The personnel of the committee is as follows:

### *Executive Committee*

D. KNICKERBACKER BOYD, Chairman, Philadelphia Chapter, American Institute Architects  
D. H. Kenney, Acting Secretary, Engineers' Club  
Andrew Wright Crawford, Secretary, Art Jury and City Parks Association  
James W. Follin, Bureau of Municipal Research  
Powell Evans, Chamber of Commerce  
Leslie W. Miller, Fairmount Park Art Association  
J. I. Bright, Philadelphia Chapter American Institute of Architects  
J. N. McGarvey, Philadelphia Operative Builders Association  
E. S. McKaig, Zoning Commission  
W. J. Wilson, Building Trades Council A. F. of L.  
A. S. Faught, Civil Service Reform Association

### *Committee on City Planning*

J. I. Bright, Chairman, Philadelphia Chapter American Institute Architects  
Albert Kelsey, T-Square Club  
M. B. Medary, Philadelphia Housing Association  
Andrew Wright Crawford, Art Jury and City Parks Association  
J. H. Rankin, Philadelphia Chapter American Institute of Architects  
W. P. Parker, Engineers' Club  
A. M. Collins, President, Main Line Citizens' Association  
E. E. Hogle, Automobile Club of Philadelphia  
Daniel Crawford, Jr., President, Philadelphia Operative Builders' Association  
*Sub-Committee on Zoning of the City Planning Committee*  
E. S. McKaig, Sub-Chairman, Zoning Commission  
Richard H. Morris, Philadelphia

## *Build Permanent Prestige Thru BUILDERS' GUIDE Advertising*

The value of prestige and goodwill is greater than the cash value of the great factories and buildings of great industrial institutions. You could buy the entire Goodyear Rubber Co. cheaper than the Goodyear name.

Advertising builds reputation, prestige and goodwill. It is the solid foundation of the success of any business establishment. Without advertising your competitor who advertises holds you in the hollow of his hand. He can cut his selling costs to a point where he can easily undersell you and still make a profit. In fact 84% of the business failures in America are non-advertisers.

You can build your reputation and get a fast hold on YOUR public thru *Builders' Guide*.

Advertising in *Builders' Guide* is a profitable investment.

Advertising in the *Builders' Guide* gives results, reaches your prospect at lowest cost per prospect.

We can give you expert advertising counsel.

An interview will entail no obligation. Call or phone.

*It takes Grit:  
Have You Enough to do it?*

Manufacturers Mutual Fire Insurance Company

J. N. McGarvey, Philadelphia Operative Builders Association

W. H. Wilson, Philadelphia Real Estate Board

E. V. Seeler, Zoning Commission

I. Ihlder, Philadelphia Housing Association

G. Dundaker, Chamber of Commerce

J. M. Mallory, Fire Prevention Expert

Emile G. Parrot, City Club

These committees have held meetings on October 17th, 22nd and November 4th, at which the functioning of the proposed city planning and zoning commissions had been discussed, plans formulated for a permanent organization and a program arranged for the public meeting at Witherspoon Hall on Nov. 18. The principal speaker at the meeting was Edward M. Bassett, counsel for the Zoning Commission of New York City. This is par-

ticularly interesting in view of the proposed zoning ordinance now before councils. There were also short addresses from about ten local persons on the various phases of city planning and zoning.

A sub-committee on legislation comprising A. S. Nugent, E. S. McKaig and James W. Follin have drawn up a general statement containing suggestions to direct the drafting of legislation to create city planning and zoning commissions, and to co-ordinate our recommendations with those made by the existing zoning commission in the ordinance now before councils. In that ordinance it is proposed to administer the zoning regulations by a new division of zoning to be created in the Bureau of Surveys, while appeals for such administering would be carried to a new zoning commission to be created under Article II Section 9 of the new charter previously referred to.

D. KNICKERBACKER BOYD,  
Chairman Executive Committee.

shingles was \$8.00 per square and on the red cedar shingle \$10.00 per thousand. If he had explained at the time that his selling price of the shingles at \$10.00 per thousand was identically the same cost to the consumer of \$8.00 per square, he no doubt would have sold the shingles without further argument. The asphalt shingles cost this dealer \$7.00 per square, leaving him a profit of \$1.00 per square. The clear red cedar shingle cost him \$7.95 per thousand, leaving him a profit of \$2.05 per thousand, or \$1.64 per square. He would not only have made considerable increased profit, but his customer would have covered his large barn, requiring eighty thousand shingles, at some less cost, for the reason that the shingles would only require about two-thirds the amount of sheathing as would be required under the substitute shingle.

"Other dealers should make such an analysis of their cost, profit to them, and the service they render their customer."  
—*Lumber Trade Journal*.

## HIGH PRICES AND SUBSTITUTES

By C. A. MAUK, of Toledo, an authority on shingles

"In comparing prices of any given article with cost of substitutes, it is only too frequent that the real merit of the two articles is not compared at the same time. It has generally been conceded by all lumbermen that the price of red cedar shingles for years past has been too low as compared with the prices of other forest products, and it is a well-known fact that the manufacturer of red cedar shingles has lived from hand to mouth, barely existing, and has not made any money. This condition resulted from the industry being largely composed of small manufacturers located in isolated districts and with little or no selling organization, and, in consequence, the prices they received for their product fluctuated frequently and seriously, according to the demand.

"The low prices at which shingles have sold from time to time should not be a reflection on the real merit or value of shingles. Now, then, let us compare the market price of red cedar shingles with the principal and popular substitute—*asphalt shingles*, as of two or three years ago and as of today. The low price on asphalt shingles sold to the dealer was about \$5.00 per square. Present-day price on asphalt shingles is \$7.00 per square. The low price on 16-inch clear red cedar shingles was approximately \$4.50 per thousand. Present-day price on the same grade of shingles is approximately \$8.00 per thousand—an increase of 40 per cent.

in the cost of the substitute and an increase of 75 per cent. in the cost of shingles. These figures evidence the fact that under the old prices the substitute shingles were either too high or the red cedar shingles too low in cost. Most of the dealers will agree that the latter was the case, considering the real merit and value to the consumer of the article. The seller of asphalt shingles is generally authorized by the manufacturer to guarantee the life of them for ten years. A good grade of clear red cedar shingles can safely be guaranteed for forty years, or about four times as long, providing they are put on with the proper nail that will not corrode. Surely, some credit in the original cost should be given to an article on which positive assurance is given of much longer durability.

"When shingles are quoted by the dealer to the consumer on the per thousand basis and the substitute quoted per square, the consumer frequently does not know or realize the difference, and it is only natural that the consumer assumes that the price is relative and that one thousand shingles only equal one square, and, as a matter of fact, eight hundred clear shingles cover one square.

"Quite recently one of the dealers in Ohio was placing an order for barn material and stated that one large barn was to be covered with asphalt shingles on account of the increased cost of red cedar shingles. His selling price on the asphalt

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—*Elbert Hubbard*.

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—*Making advertising pay*.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the *Builder's Guide* you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "*Guide*," the only building magazine this side of Manhattan Island.

## In Buildings Where Safety is Essential Mineral Flooring Meets All Requirements

STORES

RESTAURANTS

FACTORIES

HOSPITALS

CLUBS

98% fireproof by Government test, *Mineral Flooring* provides the safest practical floor covering for stores, restaurants, factories, hospitals and clubs.

*Mineral Flooring* is not only the ideal fireproof floor covering, but it is a floor that guards the health of those walking and working on it.

Made of scientifically selected minerals, crushed and mixed with chemicals, *Mineral Flooring* is laid like plaster over old or new floors and forms a fireproof, one-piece, sanitary, warm floor covering. A floor covering that gives protection from fire, from wear, and from ill health where damp cold floors are in use.

Don't accept a substitute for a *Mineral Flooring*. Be sure you get a Mineral Composition Floor manufactured by the Philadelphia Mineral Flooring Company and laid under the supervision of our flooring experts. In no other way can you be certain of obtaining a permanent, fireproof composition floor covering.

## As The Editor Sees It

ACCORDING to the old adage "For every evil under the sun there is a cure or there is none; if there be one try and find it, if there be none never mind it." The greatest evil existing in this country, today is Bolshevism, and we believe there are remedies for this insidious disease. These remedies lie in the education of foreign labor to a better understanding of the principles and ideals of Americanism, in the establishing of closer and more friendly relationship between employer and employee, in the improvement of living conditions for the working man. When these things are all accomplished the seed of Bolshevism will fall on barren soil.

We must, in fact, make our appeal to the workers of the nation and render them immune to the radical policies of the Bolsheviks—the Bolsheviks, of course, are too busy to work—if they were the workers of the country the case would not look so hopeful; but they are the shirkers, the malcontents and the only sure way to kill Bolshevism is to immunize the laboring man and thus prevent the spread of the disease.

Many large concerns have already testified to the satisfactory results in this direction obtained through employee's representation plans; in many cases these plans have been the means of averting strikes and in all instances have created

an atmosphere of contentment and fair dealing.

Better living conditions have long been recognized as a potent factor in overcoming labor unrest. According to observations made by the senate committee which investigated the steel strike, "It is observable in the strike districts that the men who own their homes are more contented and more interested in the affairs of the country. One real antidote for unrest in this country is home ownership. It is difficult to plant the seeds of revolution in the minds of those who own their own homes. The work of the steel companies in building homes has been commendable. It is to be hoped that such work will be enlarged and carried on by them. \* \* \* The question of aid and encouragement in the work of assisting townspeople of small means in securing their own homes in some such way as the farmer has been aided under the Federal farm loan act is worthy of the serious consideration of Congress."

Commenting on this report, "It is now several months," says the *American Contractor*, "since Senator Calder introduced in the U. S. Senate a bill for the establishment of a system of Federal Home Loan Banks, under which the machinery now at hand in the building and loan associations of the nation would be used to do exactly what the Senate's steel strike committee suggests is worth while.

The home question is more important

than the Senate Committee indicates by the space given it in their recommendations. Anyone who knows the conventional steel town or coal mining camp knows that the shacks which make the landscape hideous in these localities, have much to do with the unrest crop there. The only thing that gets a healthy growth in a dark, squalid home, is discontent.

Another bill now before Congress is that proposed by Congressman Tinkham, to create a Bureau of Housing and Living conditions as an activity of the Department of Labor. The aims of the bureau would be to discover and disseminate means of reducing the cost of adequate housing; to promote home-building and to assist states and municipalities, commercial, industrial and financial corporations, civic organizations and individual citizens with advice and accurate information put at their disposal by experts employed by the government.

Speakers in behalf of the bill pointed out that the experience of the United States Housing Corporation, which built homes for workers at a cost of about \$110,000,000, would be of immeasurable value to public and private concerns which are pressed by the problem of housing, and would be made available to them through the new bureau. It would be an opportunity, they said, to salvage permanently the government's enormous expenditure during the war.

**I**N the hour of urgent need for home building any suggestions for the amelioration of living conditions is largely sought.

Somebody asked the other day what Edison was inventing. We have become so accustomed to this wizard keeping busy on problems, and solving them every so often that we cannot conceive of Edison ever taking a rest.

Edison is an institution, like Congress or the Postoffice Department; only Edison costs us nothing, and is always doing something worth while.

But Edison has been on the job, as usual, and among the other things he has evolved in the way of a house that bids fair to solve this rent hog problem.

Edison all these years has been pound-away at the concrete house problem, and though he has apparently solved it several times always something popped up to modify his victory.

This time it looks as though he had it. His latest offering is a two-story concrete house that, it is promised can be built in one day.

A good looking house; a big roomy house, a house that's warm in winter and cool in summer; that will never wear out, that needs no paint, and that can be built even now and be rented for \$23 a month.

No frame house can be built, approaching those specifications that can be rented for less than twice \$23, and unless there is some hitherto hidden drawback this Edison house should be a life saver.

And if private enterprise will not utilize it then cities should go into the house building business until this present scarcity of living places is supplied; for today all over the country families are actually suffering because they cannot secure decent abiding places at a rent they can afford.

Until the housing problem is solved it is a public menace, and the private landlord certainly has given us no hope.

\* \* \*

The building trades lead the list in the number of strikes reported by the Bureau of Labor Statistics, during the months of April, May and June, 1919, numbering 200 out of a total of 974 strikes. In this industry there were 4 lockouts out of a total of 42. Metal trades are next on the list with 176 strikes and 13 lockouts, textiles and clothing number 78 and 57 respectively with one lockout each and miners 51. Lumber and timber are credited during the same period with 13 strikes. In 536 strikes and 26 lockouts, the employees were reported as connected with unions; in 18 strikes and one lockout they were not so reported. Massachusetts and New York lead the list of strikes with

110 each, Pennsylvania had 92, Illinois 86 and Ohio 65. 723 strikes out of the 974 were west of the Mississippi. Of the cities, New York had the largest number of disturbances—37; Chicago had 28, Detroit 26 and Boston 17.

During this quarter the strike involving the largest number of persons was probably that of the clothing workers in New York. In 480 strikes for which the number of persons on strike was reported, nearly 500,000 strikers were involved, an average of over 1,000 per strike. In about three-fourths the question of wages and hours were prominent and in nearly one-fourth the question of union recognition or existence was involved. Of 367 strikes, 22 were settled in favor of the employers, 129 in favor of employees and 112 were compromised. The average duration of 210 strikes was 29 days.

In the first quarter of the year, the building trades were third in the list numerically, 62 out of a total of 584 strikes, being preceded by the metal trades and clothing. Lumber and timber were not listed for this quarter. Out of 313

strikes for which the number of persons on strike were reported, there were more than 800,000 strikers, an average of 2,587 per strike. The causes were about the same as for the second quarter and the average duration of 153 strikes was about 37 days.

During the twenty year from 1881 to 1900, the building trades had more strikes than any other one industry—19½% of the total number—but they involved a fewer number of men per strike; far fewer, for instance than were involved in railroad strikes during the same period, although these numbered only 5.6 per cent. of the total number recorded. Out of a total of 22,793 strikes reported from 1881 to 1900, 52.8 percent were successful, 13.6 per cent partly successful and 53.54 per cent failed.

The President of the National Association of Manufacturers estimates that strikes have cost the United States \$10,000,000 a day in the last eight months, or \$2,400,000,000; that is \$25 for every man, woman and child in the country.

## BANKING AND BUILDING OF TO-DAY AND YESTERDAY

By H. T. UNDERWOOD

President, Underwood Contracting Corporation, New Orleans Specialists in Bank Building and Equipment

I was talking with a banker in a comparatively small town in Alabama the other day. He had just signed a contract with me to construct and equip a new building for his bank, and I confess I was a bit astonished at his knowledge of what constituted the "last word" in bank equipment and appliances. He was getting along in years, in fact just about at that age when most men are referring to "the good old days." And, as I said before, it was a rather small town. Yet, here was a banker who not only wanted the best for his community, but knew what the best was.

Mr. Banker told me frankly that he wanted his building to rank with the best in the land from an architectural standpoint,—so that every person in the town could be proud of the structure, and so that it might set an example for other building owners to follow. As to equipment, mechanical appliances and conveniences, he insisted that he wanted his customers to feel that they were being taken care of in a modern, up-to-date manner.

"It is awfully easy," he said, "for us

to go along and think our past reputation will hold us up; but times change, new generations come into power and the old foggy who does not keep up with the procession is soon out of the running. A new building with the latest improvements will cause every one in this section of the country to know that we are progressive, safe and sane."

Really I wanted to applaud these words of wisdom, but when I complimented him on his wide awake attitude he said:

"Oh, pshaw! If I didn't keep my ears to the ground I'd have been out of business long ago. There are too many people fighting the new ideas as it is. Some of us have got to fight for them. Why, you remember it has been only a few years when all the coins handled during the day had to be counted and sorted by hand every night. Then along came a man with a machine that did the work. All you had to do was to dump the change in a hopper and out it came all separated, wrapped and labelled. Don't you recall how the bank clerks objected

(Continued on Page 761.)

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Apartment House**, Germantown avenue and Manheim streets, \$250,000. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. ## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmeyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmeyer Service. It is our conception of service, and service to us means that your interests stand paramount.

## **SHEETROCK** WALL BOARD

*Better I have Plaster*

**A Fireproof "Wall Board" Made of Pure Gypsum Rock**

Sheetrock is better than plaster. It fills every wall covering need for a fireproof permanent smooth foundation for interior decoration. Yet Sheetrock is not only cheaper than plaster but it saves labor and time.

Made of same materials as the scratch coat of plaster, pure gypsum rock, Sheetrock is sandwiched between mineralized paper that takes the place of the finishing coat of ordinary plaster.

Sheetrock is fireproof, non-warping and slightly pliable. You can hold a match under Sheetrock for any length of time and it won't burn. Ordinary wall boards make most buildings fire-traps—ordinary wall boards ignite in from seven to eight seconds.

Sheetrock is suitable for any room in any building. It presents a smooth, non-warping, even surface that will give permanent satisfaction and protection.

**What Builders Need**

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

## Miscellaneous Construction News

**Camp Buildings**, Highmount, Delaware County, N. Y. Architect, George S. Idell, 1705 Chestnut street, Philadelphia. Owner, Alexander Saunders, Highmount, Delaware County, N. Y. Frame, new buildings, 1 story, alterations to old buildings. Plans in progress. Will take bids in about one month.

(Continued from Page 752.)

to the machine? Said it would take their work away from them!

"Then there is that machine that makes change for the teller quicker than he could count it. Look at the automatic writing machine where a teller can write a message in his cage which is duplicated on a sheet of paper in the book-keeper's room. Look at the machine which cancels checks. Why if they had to cancel checks by hand in the big city banks, they would have to have ten times the number of clerks and twice the floor space.

"Yes," I interrupted. "And how about the mailing department with its automatic letter openers, and the folding, sealing and stamping machines? And the dictaphone to speed up stenographic work and save a busy man's time, and mimeograph letter writers that turn out imitation typewritten letters by the hundreds?"

"Sure," he said. "But those are more for the big banks in the big cities. For us fellows out in the country one of the greatest helps has been the adding machines that can't make mistakes, the monthly statement writing machines and the ledger posting that keep bookkeepers from growing gray before their time."

The development of machinery in the banking business has been remarkable, and the efficiency, time and labor saving brought about by the adoption of mechanical methods can never be computed.

But these devices have not surpassed another phase of banking development. I refer to the features of planning, building and equipment generally. It is only in the last dozen years that banks, particularly those in small towns, have been planned and built with any degree of efficiency. Yet, no kind of building work calls for greater skill. It did seem to be a fairly simple matter: A certain number of cages for the tellers, space for the officers, a room some place for the book-keepers and the other employees; perhaps a safe deposit room. A bank used to be a hard place to get into; there was no note of welcome; nothing of cheerfulness, nothing of comfort or

convenience, and little or not attempt at scientific arrangement.

Nowadays, it is recognized that a bank's primary function is to render a service, particularly a service to its customers. To render that service in the best possible manner, it is necessary that the banking room be laid out scientific-

ally. The problems of the bank building, while seemingly simple, are indeed intricate, and the proper arrangement of space, logical placing of departments and apportioning of space, call for an order of architectural and constructive intelligence that can only come from specialization in bank building work.

## AN APPEAL TO LABOR

BY HARRY A. MACKEY

Chairman of the Pennsylvania Workmen's Compensation Board

Massachusetts has recorded her verdict couched in the language and pitched to the temper of the Nation. The leaders of labor ought to take notice of the fact that, without respect to party, distinguished men from all the States are heralding the election of Governor Coolidge, as a vindication of right and justice and an assurance of the stability of our people and the perpetuation of the Republic.

American citizenship has acclaimed the result of the Massachusetts election as establishing the fact that American democracy shall survive, that class shall not prevail over class, and that one group of citizens, in mistaken zeal, shall not imperil the rights of the whole.

The verdict of the people of Massachusetts is also universally accepted as a guarantee that might is not right, and that the rules of conduct of a small group shall not be substituted for the fundamental law of the land.

The result in this election also proclaims that America is still the great melting pot of the world, and that men of all grades of education, enlightenment, social relations and racial entanglements, will ever come out of this human caldron, real pillars of our democracy, acknowledging the supremacy of the law and recognizing the authority of properly constituted officials.

Those in leadership of large groups of the working classes should consider, not so much the result of this election, as the temper of the American people. A hundred and more millions of people will be impatient with inconveniences, privation and suffering brought to their doors by small groups which seek by force and the infliction of suffering, to bring about a readjustment of their real or imaginary grievances.

My appeal is to the thoughtful, red blooded, honest, homemaking workmen of our State. He ought to stop and as-

sert the independence and sovereignty of his own individual self, before he blindly allows others to precipitate him into a situation that is going to bring suffering and privation to the homes of all our people, his own included, and, with the temper of the people as it now is, will render his organization impotent for future usefulness to himself and his fellow workmen.

In my intimate relationship with the workmen of Pennsylvania, I know how the individual workman feels. I know of no substantial bread winner in Pennsylvania who, prompted by his own judgment, would cease, at this time, to do a man's part. Now is the time for such men to stop and consider how far they will follow an irrational and un-American leadership. The workmen of Pennsylvania ought to continue at the task of production at this crisis, for a number of reasons.

It is every man's duty at this time to work as he never worked before. This is no time for men in offices or in mines or in the factories to limit the amount of work they can do. A situation is upon us all that has grown out of abnormal conditions, and I know nothing that will solve all our problems as much as constant and untiring labor. This applies to the man in the offices, mines, mills, upon the farms and in every walk of life. It is unpatriotic for any of us, yes, unworthy of our manhood, to seek to escape long and arduous hours of toil. When we all make up our minds to do this, many of the problems that now seem impossible of solution, will solve themselves.

As a matter of fact we have too many leisure hours. Men, while idle, spend money foolishly. They rush into extravagances that they would never dream of were their minds bent on their tasks and their spirits consumed in the desire to produce much. In my judgment the real solution of the problem of the high

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.**

cost of living, is to work and work and produce and produce.

More than this, with our minds all bent upon our tasks, and striving each one to excell the other in our production, we will have no time to allow our minds to wander from the fundamentals of our democracy—the agitator will be passed up as a public menace, and all will be happy and contented in activity.

Our workmen ought to remember that they owe great consideration to the people of Pennsylvania. There are three parties to every labor controversy—the employer, the workman and the great consuming and paying public. The latter, in cases that involve strikes or limitations of production, is the most important party and should have the most consideration. The workmen of Pennsylvania ought to consider the interest of the public first, because of the gratitude that labor should feel toward the people of our State. Our workmen, in my judgment, are favored far beyond any group in any other State of this Nation, or any other country in the world. Millions of dollars have been spent through the instrumentalities of service created by the Legislature for the benefit of our workmen, and the burden of all these benefits has fallen upon the public, either in the form of taxation or as an added cost of production.

The Department of Labor and Industry, with its various sub-divisions, has ramified into every nook and corner of the State, the guarantees to the workmen of Pennsylvania safe and secure places of employment, insisting upon proper hygienic and sanitary conditions, and enforces the law that guarantees fair treatment and proper hours of work to the youth and to the women, as well as to the men.

The Department of Health is organized in every hamlet of the State in order to give our people who toil, the privilege of living under healthy conditions. The great public of Pennsylvania has supported the administration of the Workmen's Compensation Law, which during the last four years has taken aid and comfort at crucial times to upwards to a million injured workmen and has distributed millions in money to the dependents of those killed in industry, and to those who have been temporarily incapacitated.

A workman therefore ought to consider well, when the very industrial integrity of our country is at stake, whether he is going to so try the patience of a bountiful public, that he will lose for himself that great zeal of our people that

has heretofore been manifested for his care and comfort and for remedial legislation in behalf of the man of labor.

The right of workmen to form organizations to advance their own interests is a fundamental doctrine of human liberties, and no man ought to gain a patient audience who would seek to deny this right. The right of collective bargaining is also fundamental, and has been thoroughly established. But a patriotic workman, without a grievance in his own working establishment, ought not to be persuaded to forsake his honorable endeavors through the advice of strangers or selfish agitators who have no interest in common with the community they enter to disturb.

Because of the condition of the times, capital is invested in most precarious undertakings. The investor cannot limit the hours of his work. The professional man must stick to his task until his job is done, even if it takes him into the small hours of the morning. The lawyer must prepare his briefs when working men are asleep, and the physician cannot deny a visit to the suffering, no matter what hour of the day or night he is called.

Huge income taxes are laid upon those who venture their money in industry. They must be paid to support the government. There can be no escape from payment. There must be co-operation between employer and employe. There can be no pay envelope unless there is some profit. With false doctrine stalking broadcast over the land, with the future of organized labor at stake, with every man's patriotic duty plainly understood, with a cry of humanity going out to us all to help produce the necessities of life in order to knock down prohibitive prices, dogmas of irresponsible agitators ought to be ignored. A deaf ear ought to be turned to those who are urging men to adopt revolution and force, and all American citizens should be devoted to the task of overcoming and solving our difficulties by one common understanding, and that is—that we will work night and day without limitation as to the time and without quibble as to individual rewards.

Real friends of labor are greatly concerned as to its future. They realize that this is its day of trial. It faces self-determination. It can continue in public confidence or wreck itself upon the rocks of bad advice.

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

### PERSONAL NOTES.

Guy King, who was in the Government service, has resumed the practice of architecture at 1513 Walnut street, and wants catalogues of the various building materials.

\* \* \*

Andrew J. Borzner, 717 Walnut street, will take over the practice of Frederick T. Uezzell, architect, who has moved to Fort Myers, Florida.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

## THE GROUP HOUSE

It is only lately that Americans have been willing to give the group house a hearing. We have so long been accustomed to living in detached or single houses that they had become a part of our national life, and until recently we were prejudiced against any suggestion of housing neighboring families under the same roof. We seemed to take the position that such manners of living were somewhat degrading, and that by an adoption of the plan we would suffer an infringement of our liberties. This attitude was true not only of the household-er, but was apparently shared by the architect and the builder. He was, indeed, a brave man who ventured to suggest to a client that the group house had any advantages over the customary detached type.

Many of us were, of course, more or less acquainted with the fact that the group house has been successfully used abroad for many generations, and that in those countries there was no sentiment against the type, but we in America were slow to recognize its advantages, and until lately it had but few friends in this country.

The growing tendency in favor of the group house began to assert itself shortly after the beginning of construction on our huge industrial housing developments. Industrial housing needs were at that time so important that every effort was directed toward an attempt to conserve the time, labor and material required for the erection of houses. Many architects and builders had long recognized the fact that the group house fitted these conditions exactly and that here was an opportunity to introduce the type on a large scale. They felt that the need for houses was so great that most people would lay aside their natural prejudices and would rent or buy anything that offered adequate shelter. These architects and builders also felt that once the average family became acquainted with the group house, many of their prejudices against it would disappear. They knew also that a large number of the workers were foreigners, many of whom had been accustomed to this type of house in their native land, and that these people could be depended on to accept the group house without question.

The phenomenal growth of the apartment house idea in this country also probably assisted in paving the way for the friendly reception which the group house is receiving. People who have been accustomed to living in apartment houses together with anywhere from two to a hundred or more other families are not

apt to object to similar conditions in the group house. In fact, many people have learned to prefer having neighbors under the same roof. This is especially true of families in which the men folk must be away from home a large part of the time.

To say that the group house has received a uniformly friendly welcome throughout the country would be untrue, but the exceptions are rare, and it is fairly safe to assume that its popularity will increase rather than subside, and that more of this type will be built every year.

The group house has several advantages over the more common detached, or single house. First, it is cheaper, as one of its walls serves two houses. For the same reason, less ground space is required; it may be built in less time; requires less material, and the cost of upkeep is less than for detached houses. Group houses are also easier to heat, which results in economy in heating equipment and in fuel. One chimney in the party wall is usually sufficient, and single plumbing lines may usually be run to serve two dwellings. The total first saving usually amounts to between \$300 and \$400 for houses with masonry walls.

From a standpoint of "looks," the group house offers far greater possibilities than do small detached houses. The pill-box effect of the latter is almost always noticeable, but where several houses are combined under one roof this feeling disappears. Experienced designers have always realized this advantage of the group house.

In designing group houses to compete with detached houses, all of the above points must be considered. If the house involves joint ownership between two or more persons; that is, one person owning say one-half and another person owning the remainder, further considerations are usually required. In this case every effort should be made to reduce the possibility of friction between the joint owners. The exterior walls, roofs, and so forth, should be constructed of durable materials which require little or no attention to maintain a neat appearance. For this reason it is wise to avoid painted surfaces on the exterior wherever practicable, as they require refinishing every four or five years, and one owner's idea of the proper time or color to paint his portion of the house might not coincide with that of his neighbor.

The construction should also be as nearly fireproof as is practicable, as the fire hazard is multiplied by an amount which almost equals the number of fami-

lies living under the same roof. In any case, the party wall between two dwellings should always be built of fire-resisting materials, extending without openings, from the basement to the under side of the roof. This wall forms a fire stop and also reduces the communication of sound between the different dwellings. Hollow tile makes a fairly light construction that is efficient in these respects and is commonly used for this purpose.—*National Builder*.

## WINTER ACTIVITY IN HOME BUILDING

New Orleans, La., November.—More than 72 per cent. of the inquiries for home-building information and house plans come from prospective builders in the winter and spring months, particularly the winter months, according to a recent analysis made by the Southern Pine Association. Of 135,089 requests for building helps, 97,433 came between November 1 and May 31, and of this 97,433—17,070 came in November and 17,921 in February. The season of greatest actual building activity is, of course, during the open warm weather months, but the planning and deciding are done in the winter and early spring.

People who want to buy things do not catch the seller, chloroform him and cram the orders into his pocket.

Advertising is the proper education of the public as to where the thing can be found, and therefore it is a necessity.

We are parts and particles of each other, but a little of the kindly glue of human brotherhood is needed to fasten us together. The policeman who keeps the crossing clear, and at the same time informs us as to the location of the post office and the First National Bank, no doubt is, in one sense, an economic waste. On the other hand, he is an economic necessity. He is a necessary middleman.

He relieves the congestion of traffic and granting the hypothesis that he does not misdirect us as to the location of the post office, he speeds us on our way.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Many a man would do a better job if he didn't know about putty.—*Ex.*

## Every Prospective Owner Gets Your Message Thru BUILDERS' GUIDE

Every owner whose name appears in the Construction News Reports of the "Builders' Guide" receives a marked copy of the current issue of BUILDERS' GUIDE.

BUILDERS' GUIDE is sent to him three times to reinforce your advertising, to co-operate with you.

The prospective owner gets his first copy of the GUIDE when his preliminary plans are on the architect's board, his second, when he is taking bids and the third when the contract is awarded. With each copy goes a letter calling the owner's

attention to the fact that his name appears in our news columns.

Thus you reach the prospective owner at the psychological time, before the material for his structure is specified. You reach him while he is more interested in building material and equipment than anything else. He is impressionable and eagerly seeks all information he can get as to how to make his building comfortable, attractive, efficient and economical.

Tell this man your story. He spends the money. Tell him your story thru BUILDERS' GUIDE, for BUILDERS' GUIDE gives advertisers advertising efficiency.

**Building News Publishing Company**  
Perry Building, Philadelphia

## THE HIGH COST OF BUILDING PIECEMEAL

Whether a saving of \$20,000 in cost of construction is a paying investment depends upon how long it will be before the entire building is needed. In other words, if a building be partly erected, with provision for future extension upwards, and the upper portion be later put on at a total cost for the entire building of \$195,000, as compared with \$175,000 estimated cost for the building erected all at once, it may be that the process of building in instalments is the better policy. The whole question hinges on how long it will be after the first section is erected before the second section is needed, and whether the carrying charges of the second section added at the time the first section is built will be greater than the saving, due to construction all at once.

In the case of a building 400 feet long, 60 feet wide and four stories high, for which estimates have been made by the Alberthaw Construction Company, Boston, Mass., this question of building in two instalments, as compared with building it all at once, has come up. The estimated cost of two stories, erected with provisions for putting two additional stories above them at a later date, figures out at about \$110,000. Of this amount no less than \$20,000 are absorbed in the heavy footings and columns necessary to carry the four-story structure, but out of all proportion for the two stories now being erected, and in the temporary roof placed above the second story, the latter to be removed when the upper portion of the building is put up.

In a certain sense, the \$20,000 excess cost of the structure now erected has to be carried without giving any return until the building is completed. If an interval of five years elapses between the building of the two sections, the carrying charge at six per cent. on this heavy substructure and the temporary roof, works out at about \$7,000 of wholly unproductive outlay. To this should be added a further item of \$20,000 difference in first cost between the \$195,000 estimated for the entire building erected in two instalments and the \$175,000 estimated for the entire building erected now. This makes \$27,000 as the charge against building in two instalments.

On the other hand, if we build the whole structure now we shall have to carry over that period of five years the difference between \$175,000, total cost of the structure, and \$110,000, estimated cost of the lower two stories, as mentioned above. This difference of \$65,000 taken at six per cent. compound interest for five years, would show carrying

charges of approximately \$22,000. It is evident from these figures that there would be a very definite saving in favor of building the whole structure now, if the period between the two halves is five years.

With a much longer period elapsing between the erection of the two sections of the building, the saving would work out in the other direction. For instance, if we take ten years as the period, the carrying charge on the extra \$65,000 due to building the two upper stories now would be about \$51,400. To offset these, the carrying charges on the \$20,000 substructure and temporary roof would be \$16,000, to which is again added the \$20,000 in first cost, making a total of \$36,000. This shows that the advantage lies with the piecemeal construction to the amount of about \$15,400.

It is thus evident that only by considering how long it will be before the added floor space is necessary can the manufacturer determine, with any assurance, which method of erection will be most advantageous to him. With industrial conditions as they are in this country today, where the demand for almost all manufactured products is far ahead of the supply, resulting in high prices, high wages and quick turnovers, the usual answer to the question as to whether it would pay to put up the whole building now will be in the affirmative, because the natural growth required of manufacturing facilities will, in most cases, be fast enough to require the added space far inside the time limit at which the piecemeal construction becomes the advantageous one to select.

When to this we add the fact that building the whole structure now makes it all available for use the moment added manufacturing or storage space becomes necessary, it is evident that this is one very good way of avoiding the cramped quarters which always result when demand on the plant's facilities overtake and largely exceed its capacity. If, therefore, there is any reasonable chance that further additional space will be required within five or six years, the far-seeing executive will decide that building the whole plant at once is the real solution of his problem.—*National Builder*.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

## In Buildings Where Safety is Essential Mineral Flooring Meets All Requirements

98% fireproof by Government test, *Mineral Flooring* provides the safest practical floor covering for stores, restaurants, factories, hospitals and clubs.

*Mineral Flooring* is not only the ideal fireproof floor covering, but it is a floor that guards the health of those walking and working on it.

Made of scientifically selected minerals, crushed and mixed with chemicals, *Mineral Flooring* is laid like plaster over old or new floors and forms a fireproof, one-piece, sanitary, warm floor covering. A floor covering that gives protection from fire, from wear, and from ill health where damp cold floors are in use.

Don't accept a substitute for a *Mineral Flooring*. Be sure you get a Mineral Composition Floor manufactured by the Philadelphia Mineral Flooring Company and laid under the supervision of our flooring experts. In no other way can you be certain of obtaining a permanent, fireproof composition floor covering.

## As The Editor Sees It

SO much of the future depends on increased production that we cannot emphasize its importance too much at this time. It is the duty of every one to spread the gospel of greater production so that normal conditions may be established. R. D. Halton, Vice-president and General Manager of Laclede-Christy, of St. Louis, has just sent out an advertising letter with "Production" as its keynote.

"Production," writes Mr. Halton, "is this the one big solution to the present industrial crisis and to the H. C. L.? Let us analyze; let us dig up some hard, cold facts:

"First—What happens in one nation affects all others, whether it concerns money, materials, or men. The man-power of the United States is immediately governed in its quantity and its efficiency by the man-power of the world. The labor supply of the world has been diminished by seven million able-bodied men who were killed in the war, plus seven million more whose injuries have made them unavailable for labor, plus a considerable number of other millions who are still in the various armies of the world.

"Second—For five years no immigrants have entered this country from Europe, resulting in a shortage of five million laborers.

"Third—A great many of America's foreign-born who have been over here

for years are now going back with their savings to the old countries.

"And then in spite of this greatly reduced man-power, the majority of men are insisting on working fewer hours than before the war. This regardless of the fact that the demand for merchandise is far greater than the supply. Why cannot labor see that the increased cost of living can be reduced only by increasing production or decreasing consumption, and if they won't do the latter they *must do the former*.

"The whole solution of our industrial ills consists of producing more than we consume, more than our neighbors consume, and in connection with other countries more than the world consumes. Then, and then only, will prices fall, wages become stabilized, and a sane, rational, new normal price level be established.

"Now what can we do?

"First, we can all work harder and work longer, thus setting an example for those in our employ. We can preach the gospel of increased production to our workers—not by cramming the idea down their throats—but by putting the whole matter up to them clearly and sincerely, by means of weekly talks to them, by means of bulletins and house organs, by means of letters and circulars enclosed in their pay envelopes—by means of local newspaper advertising. In brief, there is need right now for a nation-

wide campaign to sell *contentment* to American labor.

"Show your men how in Germany labor is responding to the demand for production by working twelve and fourteen hours daily—how even the German Socialists are preaching that production must be forced for the workman's own good. Tell them that our own Socialist, John Spargo, says: "The first great task of any Socialist society must be to increase the productivity of labor," and that the American Federation of Labor says, "The H. C. L. can be reduced only through *intensified, increased production*."

"Second, we can improve the *quality* of production. P. L. Burkhard, an industrial engineer, estimates that the average industry today is susceptible to increased production with proportionate decreased costs of from 30 to 300 per cent. In other words, while production increased during the war, *efficiency* actually decreased, because efficiency can be calculated only in relation to cost, and the present H. C. L. is ample proof that the minimum unit cost of production has not been attained."

\* \* \*

THERE seems to be a general stoppage of production. If laborers would cease producing the dollar which goes into the pockets of the strike agitator, doubtless the altruistic interest in the welfare of the working man on the part of many a labor leader would flag.

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS, JR.**

1209 Arch Street,  
BELL PHONE, WALNUT 1086

Philadelphia  
KEYSTONE PHONE, RACE 614

**BLUE  
PRINTS**

If such were the case the average laborer would realize the advantages to the country in general and to himself and family in particular, from speeding up of production and the consequent reduction in the H. C. of L.

\* \* \*

Some let-down in business during the fall months would have occasioned little, if any surprise, in view of the tremendous activities which carried through the entire summer. The falling off has, however, not materialized and business totals

for the month under review are larger than were expected. Sales of merchandise at both wholesale and retail are unusually active and the carriers are getting more business than they can well handle in all sections of the country. Business has gone ahead in spite of the steel strike, in spite of the coal strike, and will probably go ahead even though other threatened strikes become realities. The great majority of the people seem to realize that this is time to push hard for business and they are doing it.

leaders who take this short-sighted view are growing fewer every day. The number of contracts for new construction operations that have been let in the past few months and are due to be let in the next few weeks show that many business men are awake to the need of going full speed ahead instead of waiting for cost declines that will not come. The slower investors will be forced to trail behind their more progressive leaders and in the end will pay as high, or perhaps higher, for their postponed work, in addition to losing time and profit that a little foresight would have saved them.

A lesson learned from the war itself points the way out of the maze of uncertainty and unrest which has followed the sudden transition from war to peace. The employer, the merchant, the industrial producer, all are confident of the future, yet few dare start ahead with firm tread. The reason for the uncertainty is lack of confidence. The broad confidence which every man had in his neighbor while the war was on dwindled to a pin-point when the war emergency disappeared.

Yet here lies the opportunity for making the industrial life of the nation a better and more stable element in its welfare. If each class that is engaged in the task of restoring the country's prosperity would help revive the spirit of trust, confidence and co-operation manifested during the war, believing that their better natures should stand revealed in peace times as well as during the stress of war, a happy start would be gained toward the reconstruction of America into a better, happier, more prosperous place in which to live. The trend toward such a movement for the substitution of co-operation for competition has already shown itself, and it promises to bring business and industrial relations to a higher level than has ever been reached before.

#### ILLUSTRATED ADDRESS.

On Monday evening, December 8th, Mr. C. B. J. Snyder, architect for the Board of Education of New York City, will deliver an illustrated address as the guest of the Philadelphia Chapter of the American Institute of Architects.

His subject will relate to the various school properties of New York City. The address will be given at the T Square Club, the members of which and of the Engineers' Club are invited to attend. A cordial invitation will also be extended to the members of the local Board of Education.

For twenty years Mr. Snyder has been the architect for the New York Board of Education, and during that time he has modernized and rebuilt nearly all the school properties in different boroughs of the metropolis. He has also designed and supervised the erection of all new buildings evolving several distinct types, especially conceived to combat the intensive conditions which prevail on Manhattan Island.

## LABOR AND PRODUCTION

### Favorable Situation of American Workingman Blocks Progress of Bolshevism—Industrial Leaders Prevent Improved Conditions by Delaying Building Activities

By NOBLE FOSTER HOGGSON, President, Hoggson Brothers, Builders

The chief reason Bolshevism has failed and will continue to fail to make any headway in this country is that the American workingman, in spite of the high cost of living and other troubles, real or imagined, is the most prosperous laborer in the world. In fact, he is the representative of the most prosperous class in this country if his prosperity be estimated on a scientific basis of comparative values rather than money values, for he has made greater strides toward equalizing income and outgo than any other person in the social scale, and he alone has been able to demand and get an increase in income as soon as living costs have arisen. Business men who would postpone the resumption of industrial activities at full pressure while waiting for the wage level and other cost levels to fall, hoping by such action to force a decline in the cost of labor, are unknowingly attempting to blast holes in the dykes that are protecting our nation from all the horrors of blood-soaked Russia.

The newspapers have told us of the concerted efforts that have been made for a year or more to introduce Bolshevik doctrines and Bolshevik methods of misgovernment in this country; but the same men who were terrified six months ago by the outlook for the immediate future are agreed today that the radical doctrines of Russian extremists cannot be transplanted successfully to American soil. To some persons who know the workingmen of this country only through the utterances of a few of their more radical spokesmen, it has come as a surprise to learn that the failure of the Bolsheviks to gain a foothold has been due largely to the American workingman himself, who heard the Bolsheviks' arguments only to laugh them aside.

The average laborer in this country, even the unskilled laborer, is not an ig-

norant person. He knows that he is prosperous, and that he will continue to be prosperous if he continues to watch out for his own welfare as assiduously as he has done in the past and does not become too unreasonable in his demands; he knows that as soon as the cost of living advances his wages will advance, and that, whatever the conditions of life may be for others, he will always be able to earn a living wage. Knowing that his trades unions and his special representatives in Congress and elsewhere are capable of looking out for his welfare in the future as in the past, the American workingman is well satisfied to rely upon the machinery he has at hand without experimenting with the strange contrivances of a disturbed Europe.

Leaders of industry who are disturbed by the high labor cost of their products and who are hoping to see the cost of labor decline in the near future are to be disappointed, for the relative cost of labor will remain the same a year from today and the likelihood is that the actual cost will be higher rather than lower. Those industrial leaders who, in addition to hoping for such a decline in the wage scale, are intentionally or unintentionally helping to bring it about by deferring necessary business activities such as building operations are, as a matter of fact, unwittingly helping, instead of checking, a tendency which would give the Bolshevik the opportunity he seeks in America—they are threatening the sources of that prosperity which is today making the American workingman one of the strongest bulwarks against the Bolshevik and are undermining the workingman's confidence in the good sense and far-sightedness of his employer.

The danger that such a situation as this may be created is not, however, an imminent danger, because the industrial

## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

## With Any WALL Covering Made—

Sheetrock is more than wall board—it is better than wall board, for it is plaster in wall board form.

Made of fireproof gypsum rock, sandwiched between mineralized sheets of paper, Sheetrock provides just as safe a wall and ceiling covering as metal lath plastering.

Take samples of other wall boards and test them with a match. The result will show why Sheetrock was preferred by the U. S. Government for its army cantonments.

Compare Sheetrock in thickness with ordinary wall boards—it is nearly twice as thick. Try to break it, scratch the pure gypsum rock center, drive a nail thru it. Every test will prove the superiority of Sheetrock.

Sheetrock insulates heat and cold, for it is a non-conductor. Therefore it will save coal in winter and discomfort in summer—that means permanent satisfaction.

With Sheetrock you can overcome delays caused by late deliveries of material, by slow ripening and drying of plaster and by labor difficulties.

Sheetrock saves time and money.

**Plans or No Plans**There are two classes of builders who need the help  
of a strong, modern lumber centre,—those who have  
planned their operations well, and those who haven't.If you have planned well, you will need a strong  
organization to help carry out your plans. The best is  
none too good. In big building operations, all of our  
experience and resources, including the powerful aid  
of our Traffic Department, are constantly required.But if you have *not* been able to make careful plans;  
if you are forced to build hastily and under pressure,  
then only an uncommonly strong organization will en-  
able you to accomplish your purpose. When you need  
unusual stocks or service that you have no right to  
expect, then the resources of the LLOYD organization  
will often save the day for you.Some day you'll build. If you want the work finished  
on time, see that the lumber comes from LLOYD.**WILLIAM M. LLOYD COMPANY**

# Barrett Specification Roofs

## 20 Years of Service Guaranteed—

IN the old days buying a roof very often proved to be something of a gamble.

Maybe you got just what you specified, and maybe not.

The cost per square foot was too often taken as the only standard of value—frequently to the owner's subsequent sorrow.

*Today all this is changed.*

It was the Barrett Specification which first made it possible for building owners everywhere to obtain, through their local contractors, a *standardized roof*, worked out by roofing engineers and based on scientific principles of modern roof construction.

Today we offer to *guarantee* Barrett Specification Roofs for a period of *20 years!*

This guaranty is obtainable on any roof of 50 squares or more, in any

town of 25,000 population or over, and in smaller places where our Inspection Service is available.

It is a Surety Bond, issued by the U. S. Fidelity & Guaranty Company, of Baltimore.

To obtain this Surety Bond you have only to insert in your building Specifications the following:

"The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

The guaranty costs you nothing. We merely require that the roofing contractor be approved by us and that we be given an opportunity to inspect the construction.

We shall be glad to send you a copy of *The Barrett Specification*, with diagrams ready for insertion in your building plans.

### The 20-Year Bond

We illustrate above the 20-Year Surety Bond that will be given on all roofs of 50 squares or over in towns of 25,000 population or more and in other places where our Inspection Service is available.

(Stapleton), in accordance with the drawing and specifications, copies of which may be had at this office in the discretion of the Supervising Architect.—James A. Wetmore, Acting Supervising Architect.

### PROPOSALS FOR ALTERATION OF BUILDING.

**PICATINNY ARSENAL**, Dover, N. J., December 4, 1919.—Sealed proposals for altering building No. 117, will be received until 1 o'clock P. M. on December 22, 1919, and then opened. Information furnished on application to Commanding Officer, Picatinny Arsenal, Dover, N. J.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

## LUMP SUM CONTRACT

Competition Is a Desirable Thing In Contracting—Unit Price Contracts Encourage Competition and Develop Initiative.

By DUDLEY F. HOTMAN.

The Government lost \$4,500,000 through waste, loss and inefficiency, according to an estimate recently presented to the Congressional Subcommittee investigation the construction of Camp Grant. Mr. J. P. O'Connor, a Chicago contractor, who made a survey of the camp for the committee, stated that the work could have been done on a lump sum basis of \$8,819,544, whereas War Department figures show that the total cost was upward of \$13,500,000. Mr. O'Connor, who is head of J. P. and W. O. O'Connor Company, fixed the responsibility for profiteering on the cost plus system that was approved by the Emergency Construction Committee. He declared that this method of doing work is not only more expensive, but that it delays operations. Much has been said about the relative merits of the two forms of contracts—the lump sum form and the cost plus form. Some companies have executed work successfully on the cost plus form and they have brought forth their arguments in its favor.

We all are ready, I think, to admit that competition is a desirable thing in the contracting business as it is in all phases of industrial endeavor. The contractor working on a lump sum basis has not only a reputation to maintain, but his very livelihood is at stake. He may have taken the work at such a low figure that a loss seems inevitable; but by the intelligent use of his organization and by the application of new methods of handling material and labor he is able to turn what seemed to be certain loss into a fair profit. There are, in fact, three important methods of doing work. First, there is the "company force" method. Then there is the agreed sum method with a provision for a percentage basis for additional or unforeseen work. The third method is the cost plus system based on the actual cost of the work. As a rule, the first method is used only when the work to be done is too small to contract or when local or emergency conditions are such that it is not practical to contract it. The problem then is whether to choose the lump sum or the cost plus system of doing work.

The greatest asset that a contractor has is his organization and his knowledge

of men and materials. He must know where labor can be readily obtained and he must know the source of supplies and how they can best be transported. The successful contractor must know market conditions, and he must, of course, have an intimate knowledge of the work to be done. Now then, if the work is let on the lump sum basis the owner gets the benefit of the judgment and the experience of many men and many firms. One contractor will analyze the supply situation more carefully than the others, another will have a better plant to handle this particular work than his competitors and a third may have better methods of doing work. In the lump sum contract the owner gets the advantage of pitting all of these men against each other. In the cost plus contract the owner gets the benefit of one man's or one firm's judgment and experience and it is just barely possible that the wrong man may have been selected. Might this not very easily happen on public work where public officials are interested more in the political strip and the size of the contractors' following than they are in his ability as a contractor?

You know this is a funny old world. Folks are just human. And sometimes methods that look very well on paper and are even proved to be efficient in certain isolated, individual cases would prove to be quite the contrary if put into universal practice. Of course there are contractors who favor the cost plus contract and who have found that it could be used by them with a resulting economy to both themselves and the owner. But if this form of contract came into general use there would be no such thing as an important general contracting business in this country. There would be a few large firms handling all of the big jobs and the smaller jobs would be run by a superintendent. The contractor of moderate means would simply be a superintendent—that is all. The taxpayer would suffer most. He always does. Funds derived from taxes and bond issues for the purpose of constructing public improvements would be spent in some such manner as the public moneys were spent at Camp Grant.—*American Contractor.*

Portland Cement, Sand or Gravel by carload. Consult DAVID FRANCE CO.,  
Tasker Street Wharf, Delaware River, Philadelphia.

## In Buildings Where Safety is Essential Mineral Flooring Meets All Requirements

98% fireproof by Government test, **Mineral Flooring** provides the safest practical floor covering for stores, restaurants, factories, hospitals and clubs.

**Mineral Flooring** is not only the ideal fireproof floor covering, but it is a floor that guards the health of those walking and working on it.

Made of scientifically selected minerals, crushed and mixed with chemicals, **Mineral Flooring** is laid like plaster over old or new floors and forms a fireproof, one-piece, sanitary, warm floor covering. A floor covering that gives protection from fire, from wear, and from ill health where damp cold floors are in use.

Don't accept a substitute for a **Mineral Flooring**. Be sure you get a Mineral Composition Floor manufactured by the Philadelphia Mineral Flooring Company and laid under the supervision of our flooring experts. In no other way can you be certain of obtaining a permanent, fireproof composition floor covering.

## As The Editor Sees It

COMMENTING on the demands made by the miners in the coal strike, Attorney General Palmer says that the wage increases proposed by Dr. Garfield would equalize the average miner's wages with the present high cost of living without increasing the price of coal. To grant the demands of the miners would make the cost of living still higher.

Thus the ever-growing circle—higher wages, then higher living costs; still higher wages, further advance in living costs, and in the long run the working-man is no better off than he was at first and the general public is far worse off and the country in general suffers from strikes and under production.

The public, of course, must stand pat. In the face of an ever-increasing shortage of coal and the consequent crippling of industry, it is difficult to find a bright side to the situation. From one section of the country—Seattle—comes the tale of victory and Seattle's example may well be followed by other parts of the country.

Seattle is breaking the domination over her industries of the radical element of organized labor which has held almost absolute sway in that city for the past three years, and has so restricted production and increased production costs that her shipyards, lumber mills, and many lesser industries have been finding it hard to compete with those in which the labor

situation was less acute; that she was beginning to lose commerce to other Pacific ports where the labor cost of handling cargoes was less; that she was losing new industries seeking location on the Coast, which avoided Seattle because of industrial conditions.

Seeing her opportunity of becoming the greatest city on the Pacific Coast and one of the great ports of the world slipping away from her, Seattle has arisen in the might of an American city, and is breaking the tightening bonds which were beginning to strangle her industries and commerce. Seattle is rapidly going "open shop." Seattle has declared her independence of organized labor rule and is refusing even to deal with the radicals in control of organized labor in the city, whose course since the signing of the Armistice has proven them to be no better in their actions, sentiments and purposes than the I. W. W.

They do not call it "open shop" in Seattle. They call it the "American Plan of Employment" which, as defined by the "Associated Industries of Seattle," the organization leading the movement to success, means that every man shall be protected in his inalienable right to work, regardless of political, religious or labor affiliations; that every employer shall be protected in his right to run his own business and to hire employees without having to gain the permission of an autocrat of labor.

The open shop is being established in Seattle by the breaking of a series of strikes, designed by the radicals in the labor movement as a substitute for the general strike, by which they planned to bring about the paralysis of industry in Seattle and so discourage employers that they would be able to take over industry themselves under a soviet system. The open shop is being established by the force of public opinion as the result of an intensive publicity campaign in the Seattle dailies, conducted by the Associated Industries. Pages on pages of advertising informed the Seattle public that the industries and commerce of Seattle were being attacked by the radicals of organized labor and that, if their domination over organized labor and the industries and commerce of Seattle were not broken, the population, industry, commerce and prosperity of the city would decline.

The response was prompt. The Chamber of Commerce, the Rotary Club, the Kiwanis Club and all other civic and commercial organizations of the city took action demanding the end of radicalism and sabotage in Seattle, and endorsing the open shop in industry. These declarations were published in page advertisements, and at the end of ten days of this intensive advertising, the public sentiment in Seattle was overwhelmingly in favor of Americanism in industry, and the power of the radicals was broken.

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS, JR.**

BELL PHONE, WALNUT 1086  
Philadelphia  
KEYSTONE PHONE, RACE 614

**BLUE  
PRINTS**

Where, a year ago, the closed shop was strongly supported by public opinion in Seattle, today the public is demanding open shop, and any employer who signs a closed shop agreement with any labor union will be exceedingly unpopular.

The movement in Seattle is not against unionism, but against the domination of unionism and industry by un-American radicals. The Associated Industries, in its publicity, has repeatedly recognized the right of workers, as well as employers, to organize; has endorsed the principle of collective bargaining; has declared that there shall be no discrimination against union men under the American Plan, and has urged employers not to take advantage of unemployment to cut wages. The Associated Industries has been consistently American and so has won the confidence of the public and of the conservatives of union labor.

Seattle is winning industrial independence by the power of organization. While the individual employer, with a few exceptions, in the past has been unable to withstand the radicals who ruled Seattle labor and has bowed to their dictates, the employers of Seattle, banded together along with many other citizens in the Associated Industries, have been able to defy the radicals and to establish open shop in every Seattle industry in which a strike has occurred or a contract broken by the unions, during the past three months. In rapid succession, the building industry, the job printing industry, the merchant tailors, the dyers and cleaners, the jewelers, the shoe repair shops and the master pile drivers have declared and established their independence of radical domination, meaning that the unions have lost control of industries in which thousands of men and women are employed.

Seattle would progress on the open shop road much more rapidly, under the stimulus of public opinion, if it were not for the fact that the Associated Industries has taken a strong stand against the breaking of existing contracts with labor unions. One of the cardinal principles of the organization is that employers must keep faith with each other and with employes, and so the open shop movement progresses as strikes occur, unions break contracts and existing contracts expire.

The Associated Industries was formed in Seattle as a result of the general strike of last February. The revolutionary character of that attempt was recognized by the public and the necessity of cleaning the radicals out of organized labor was brought home. There was much open shop sentiment as a result of the general strike, but as a large percentage of union labor in Seattle is loyal American, the majority of employers favored

giving the unions a chance to clean house of the radicals before taking any drastic steps. The Associated Industries, led by Frank Waterhouse, a leading citizen of Seattle, with large shipping and industrial interests, was organized to band all employers together in an effort to bridge the chasm between the employers and employes by giving the employes such a square deal that the revolutionary appeals of the radicals would fall upon deaf ears, and that labor would throw the I. W. W. and other radicals out of control of Seattle unions. During last spring and summer, the Associated Industries grew rapidly in membership and influence, and endeavored consistently to cultivate better relations between employers and labor, and to promote a square deal for the employe, the employer and the public in general in Seattle—but the unions failed to clean house.

The final declaration for the open shop in Seattle came when Mr. Waterhouse became convinced that the radicals, still in complete domination of the unions, were attempting, by a series of strikes, to paralyze the industries of Seattle and take them over. Advance information of this plan was verified by events. On September 2, the carpenters and some of the other unions in the building trades struck to enforce impossible wage demands, in spite of the vital public need of more homes and other buildings and the willingness of the employers to arbitrate. They arrogantly stated that their demands, involving \$10 a day wage for carpenters and other exorbitant increases, must be granted first, and then they would talk arbitration. The job printers, the tailors, the dyers and cleaners and pile drivers followed in rapid succession and the air was full of talk of strikes in other industries.

On October 14, Seattle contractors, backed by the Associated Industries of Seattle, declared open shop in the building industry, after six weeks of fruitless negotiations with the unions to bring the strike to a settlement on terms which would not make it impossible for new buildings to be undertaken. Their action, announced in page advertisements in the daily newspapers, was applauded by the public. On October 31, the Building Trades Council voted to call the strike off. The strikers returned at their old wages and under open shop conditions.

It took only one seven-column, fifteen inch advertisement in the Seattle dailies, announcing open shop and inviting men to work under the American Plan, to establish the piledriving industry on the open shop basis. The fight has been harder with the job printers, the tailors and the dyers and cleaners, but the employers in each of these three industries

declared unequivocally for the open shop and are making it stick. The employing printers have been drawing men from all over the United States to take the place of those strikers who refuse to return to work, and are gradually building their forces up to normal. The tailors have been greatly helped by the fact that all the associations of employing tailors in the cities of the Pacific Coast, as far south as San Diego, California, have followed the example of Seattle and have declared open shop. The dyers and cleaners have gotten back many of their old employes and are back to normal in their operations. To have granted the demands made in any of these lines would have amounted practically to turning over the business to the employes.

The declaration of open shop by the building contractors was a body blow to union labor radicals and disarranged their plans to bring about industrial paralysis by involving one industry after another in strikes. A sentiment against strikes developed in the unions, and no more strikes were called.

Once decided for the open shop, the Associated Industries conducted an intensive publicity campaign in the three loyal daily newspapers of Seattle.

At the end of ten days, public sentiment was strongly in favor of the open shop.

Then came the murder of four former soldiers by the I. W. W. during the Armistice celebration parade at Centralia, Washington, a few miles from Seattle, and the suppression by the Government of the disloyal Union Record, the organ of the radicals, to crystallize sentiment in Seattle against the reds in control of labor. The sentiment grew so strong that the elimination of the radical alone can save unionism in Seattle.

The movement for the American Plan, the open shop, has spread from Seattle to the other cities of the Pacific Coast, and the Pacific Coast expects to see it sweep the country until the right of all Americans to work without being subjected to coercion and intimidation is established. San Francisco, Portland, Spokane and Tacoma have organized "Associated Industries" on the Seattle plan. The Pacific Coast is making a new declaration of independence for America.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Stores, Office Building and Moving Picture Theatre,** Southeast Corner Eleventh and Market streets, Philadelphia. Architects, Hoffman, Henon, Inc., Finance Building, Philadelphia. Owner, Stanley Company of America, care of Jules Mastbaum, president, 1424 South Penn Square, Philadelphia. ## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

## **SHEETROCK** WALL BOARD

*Solves Your  
Plaster Problem*

Sheetrock solves your entire plastering problem. Made of pure gypsum rock, like the scratch coat of ordinary plaster, Sheetrock is plaster in wall board form. It has wall board's ease of handling and wall board's economy of time.

Instead of having to manufacture your plaster from sand and lime and hair, instead of losing time and money in mixing and ripening and drying plaster, you can get convenient sizes of Sheetrock Wall Board delivered ready to nail to your studding.

Instead of having to nail on lath and then troweling and allowing your scratch coat to dry and your finishing coats to dry, you can nail Sheetrock to walls and ceilings and they are ready for paint, paper or panels.

Sheetrock provides a fireproof, non-warping plaster substitute for it is plaster in wall board form—a solid sheet of pure gypsum rock molded between sheets of mineralized paper.

Think of your savings—in time, money and trouble.

Write for catalogues and samples.

**What Builders Need**

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

**WILLIAM M. LLOYD COMPANY**

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

## AN INJUDICIOUS KNOCK

"You can knock a thing in such a way as to boost it," said Attorney General Gregory in an address in Washington. "Injudicious orators often and often make this mistake."

"Perhaps you've heard of the revivalist who shouted:

"I tell you friends, hell contains nothing but chorus girls, cocktails and roulette wheels!"

"Thereupon a young man in a back seat yelled:

"Oh, death, where is thy sting?"—*Exchange.*

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.**

## Proposals

### INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 25, 1919.—Sealed proposals will be opened in this office at 3 P. M., December 23, 1919, for furnishing the labor required in the construction complete, with materials that will be furnished by the Government, of an extension to the animal house for the Hygienic Laboratory, United States Public Health Service, at Washington, D. C. Drawings and specifications may be obtained at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 25, 1919.—Sealed proposals will be received at this office until 3 P. M. December 19, 1919, and then opened, for remodeling post office screen at the United States Post Office and Court House, Springfield, Illinois, in accordance with drawing Nos. 53 and M-357D and this specification, copies of which may be had at the office of the Custodian or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 26, 1919.—Sealed proposals will be opened in this office at 3 P. M., December 26, 1919, for extension of mailing vestibule and driveway of United States Post Office Building at West Chester, Pa. Drawings and specifications may be obtained from the Custodian of the building at West Chester, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 1, 1919.—Sealed proposals will be opened in this office at 3 P. M., December 30, 1919, for the installation complete of two electric elevators in the kitchen and mess hall, United States marine hospital, at New York, N. Y. (Stapleton), in accordance with the drawing and specifications, copies of which may be had at this office in the discretion of the Supervising Architect.—James A. Wetmore, Acting Supervising Architect.

### PROPOSALS FOR ALTERATION OF BUILDING.

PICATINNY ARSENAL, Dover, N. J., December 4, 1919.—Sealed proposals for altering building No. 117, will be received until 1 o'clock P. M. on December 22, 1919, and then opened. Information furnished on application to Commanding Officer, Picatinny Arsenal, Dover, N. J.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

## HEARING OF THE COMMITTEE ON BUILDINGS AND GROUNDS ON HOUSE BILL 7014, WASHINGTON, D. C.,

Remarks by Mr. Milton B. Medary, Jr., representing the American Institute of Architects and the Philadelphia Housing Association at hearing:

The research and experimental work done by the Department of Agriculture has proved of great value to the whole nation. Likewise the research and experimental work of the national government in connection with the reclamation of waste lands is a matter with which the whole nation is concerned. These and other services, however, have to do with the development of the material resources of the nation as a first consideration.

Congressman Tinkham's bill, which has been referred to your Committee, assumes that the welfare and happiness of the countless families of workers throughout the country are equally important as a matter of national concern, demanding the most exhaustive research and the most intelligent experimental work that the national government may be able to bring to bear on the problem.

The rapid growth of slum conditions in the congested areas adjacent to large markets for labor is a national menace, which cannot safely be left to such meagre control as now results from occasional local legislation, generally confined to establishing very low minima of housing and living conditions, and rarely adequately enforced.

The bill before your Committee offers an opportunity to undertake constructive research and experiment looking to the isolation of this germ of disease in the body politic, maintaining it in quarantine and eventually destroying it. It offers the opportunity of conducting such work with public funds belonging to all the people interested, and eliminates the paternalism suspected by the employee as the motive for any interest in housing and living conditions on the part of his employer.

These congested areas now produce great numbers of criminals, insane and unfit, and we are meeting the situation with more courts, corrective institutions, asylums and hospitals. We legislate against the admission of these classes to our shores, and at the same time tolerate conditions which must and do produce them as native born citizens.

The children born in this environment are the citizens of a few years hence. You are their representatives in the American Congress. Yours is the opportunity to determine whether or not the

## Woodoleum Flooring

You are safe when you buy a Woodoleum Floor.

You get an absolute and unqualified guarantee. You get a concern which is the pioneer in this line of floor coverings.

There is but one Woodoleum—accept no imitation.

Keiths' Theatre Building  
Walnut 356 Philadelphia

conditions under which they must develop their lives is now affecting, or will in the future affect the morale of the nation, by authorizing the study of their environment as a function of the Federal Government.

Such work as has been done along the lines provided for in Mr. Tinkham's bill has disclosed the far-reaching character of any investigation which attempts to go to the root of the problem.

The number of families which may be housed on a given area of land without depriving them of light, air and space for recreation, the rise in the value of the land by housing a large number of families on a small area, and the effect of this high value in prohibiting a return to less congested use of the land are some of the phases of the problem which demand the most careful and disinterested consideration. The Department of Agriculture has done much to inform the American farmer of the relation between the intelligent use of land and the sustained value of its products. It would be one of the functions of a bureau of housing and living conditions to determine the extent to which land values may be developed at the expense of the physical, moral and mental welfare of those who live upon it with the consequent charge against the whole community. Cannot such a bureau parallel the service rendered by the Agricultural Department to rural populations by informing urban populations of the consequences of unintelligent abuse of land versus its legitimate development?

As an example of conditions as they are developing throughout the country, I have in mind one of the smaller cities in Pennsylvania, which came under my observation while conducting one of the housing projects for the United States Housing Corporation. This city, founded by a religious sect on communal principles, maintained its characteristics as a green village with ample open space and planted areas available for every family for nearly two centuries, but, in spite of those traditions, the rapid growth of a great industrial plant has recently resulted in the creation of a blighted area in which overcrowding and the destruction of decent living conditions go on unchecked.

It is with the hope that research and experimental work conducted for the dissemination of public information by a bureau such as that proposed in H. R. 7014 may result in a more intelligent appreciation of housing and living conditions as a vital national problem that I earnestly ask your favorable considera-

tion of Congressman Tinkham's bill. In supporting this bill I am representing the American Institute of Architects and the Philadelphia Housing Association, who have asked me to convey their endorsement of the bill to your Committee.

### BRICK—HOW TO FIGURE AND ESTIMATE

Under the above title, a book has been issued by the Common Brick Manufacturers' Association and is now offered to the contractors and builders of the country as a part of the association's propaganda of education and business building for common brick. It is a compendium of information touching on brick construction, dealing particularly with small buildings in connection with which, as a rule, architects are not employed, but the work left in the hands of the contractor. The book contains a great deal of valuable information which will help the contractor who really desires to use brick in the construction of homes and moderate cost buildings. There is a chapter on the composition of mortars, which alone is ample justification for the publication, and that is but a very small part of its contents. It is being advertised in one or two of the journals devoted to contracting and offered to the trade at the nominal sum of \$1.00 per copy. Brick manufacturers will do well to see that the contractors and builders of their own locality are supplied with this and other publications of the Common Brick Manufacturers' Association, Ralph P. Stoddard, secretary, Conway Building, Chicago.

It is an A. B. C. of brick building, with architectural drawings, detailed information and photographs of actual construction that will inform the contractor who has been accustomed to frame construction on how to figure brick work. Also it illustrates and demonstrates how brick construction is actually cheaper now as well as better. The data for the book was prepared by William Carver, a Chicago architect, and it can be made to serve a splendid purpose in the promotion of better building.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

## KEEPING ACCURATE ACCOUNTS IS ONE WAY TO MAKE MONEY

### Knowledge of Fundamentals of Business Is Important Factor—Uniform System for Contractors Advocated

The theory that any accountant can step in, and take charge of your books for a short while and then tell you more about your own business than you know yourself, does not sound reasonable to Tom P. McGrath, of the McGrath Land and Gravel Co., of Lincoln, Ill. He argues that an accountant ought to specialize in one particular business in order to be thoroughly efficient in that business, because a careful study of the peculiar conditions surrounding the business is a matter of necessity.

Just to show that he practices what he preaches, Mr. McGrath gives a number of accounting hints for a sand and gravel business. Here they are:

**Liability Insurance.**—Present statement to your insurance agent of losses sustained during the years of operation, and if losses are low and the rate is high keep on the subject until after an experience rating is given.

**Fire Insurance.**—The same thing applies here. If all the operators have this matter up, we will have more success in getting a reduction in rates.

**New Accounting.**—Immediately upon the opening of a new account, get a rating and preserve it.

**Collections.**—Use a good follow-up system. Be able to write a good letter and not one of the rubber stamp kind. A good letter is short and direct, diplomatic and at the same time, convincing.

**Bookkeeping.**—Trial balance system, statements of assets and liabilities, and trading profit and loss, as often as necessary to keep in touch with the condition of the company, at least once a month.

**Operating.**—Watch the daily tonnage report. If not up to the standard, notify the manager of operations, and then it is up to him to correct the fault.

**Banking.**—Watch your bank account and never overdraw. It is a bad habit and destroys credit.

**Stripping.**—The cost of stripping or overburden, should be placed in Miscellaneous Assets, and monthly charges made against this account in accordance with the amount of stripped surface consumed.

**Bad Accounts.**—When every means to collect an account have failed, charge it off. Then if later on the account is col-

lected, apply it to the earnings of the current year.

**Taxes.**—The accountant should familiarize himself with the normal income, excess and war profit tax exemptions, allowances and deductions as they affect his own line of business.

**Depreciation.**—The rate of depreciation should be arrived at in the same way as an experience insurance rate is figured, namely, if the average life of your plants in the past has been ten years, the depreciation should be charged at 10 per cent. of the original cost. A replacement reserve account should be opened and credited with the amount charged to depreciation. If the replacement reserve becomes equal to the original cost of the plant no further charge.

**Obsolescence.**—In case the plant becomes obsolete before the replacement reserve has become equal to the original cost of the plant, the difference between the replacement reserve and the original cost, minus the salvage value, should be charged to obsolescence.

If you are operating a plant whose normal life is ten years, on property on which you have a lease for only five years, without privilege of extension, then a yearly charge of 10 per cent. for depreciation and an additional 10 per cent. for obsolescence, making a 20 per cent. charge against the original cost, should be made.

**Repairs and Supplies.**—When repairs and supplies are bought to maintain the plant in operation, they should be charged against expense, and not entered under assets which would show an increased valuation of your plant.

**Depletion.**—The depletion charge allowed by the Government in computing taxes, is based upon the cost of the gravel property, plus the cost of that part of the property that the plant, equipment and switch tracks occupy, from under which the sand gravel cannot be excavated.

L. A. Weatherwax, of Hendrickson & Co., Inc., contractors, of Seattle, Wash., makes a plea for standardization of accounting methods among contractors. He begins his argument by recalling the all too familiar situation at the opening of bids for almost any piece of construction work. Almost without excep-

tion, the bids are so varied because of the different methods of accounting used by the bidders, that those in charge of awarding the work are inclined to grow suspicious of each and every bidder, and of contractors as a class.

It ought not to be hard to devise a uniform system, because the great majority of contractors are operating on an invested capital of not more than \$100,000. Furthermore, unless the contractors devise such a system themselves, the Government will probably step in and do it for them.

The periodical collections for state industrial insurance, medical aid funds, etc., make it necessary that the contractor should know just where he stands. The frequent inquiries from Dun and Bradstreet for credit data, and last, but not least, the things that the banks want to know and have a right to know when the contractor goes to them to borrow money, all emphasize the necessity for a uniform system of accounting. It is bound to come some time, and the contractor undoubtedly could hasten its coming if he would start the ball rolling without delay.—“Successful Methods.”

### ENTHUSIASM

Enthusiasm is the greatest business asset in the world. It beats money, and power, and influence. Single handed, the enthusiast convinces and dominates where the wealth accumulated by a small army of workers would scarcely raise a tremor of interest. Enthusiasm tramples over prejudice and opposition, spurns inaction, storms the citadel of its object, and like an avalanche, overwhelms and engulfs all obstacles. Enthusiasm is nothing more or less than faith in action. Faith and initiative, rightly combined, remove mountainous barriers and achieve the unheard of and miraculous. Set the germ of enthusiasm afloat in your business; carry it in your attitude and manner; it spreads like contagion and influences every fibre of your industry before you realize; it begets and inspires effects you did not dream of; it means increase in production and decrease in costs; it means joy and pleasure and satisfaction to your workers; it means life, real and virile; it means spontaneous bed-rock results—the vital things that pay dividends.—*Exchange.*

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the “Builders' Guide.”

## In Buildings Where Safety is Essential Mineral Flooring Meets All Requirements

STORES

RESTAURANTS

FACTORIES

HOSPITALS

CLUBS

98% fireproof by Government test, *Mineral Flooring* provides the safest practical floor covering for stores, restaurants, factories, hospitals and clubs.

*Mineral Flooring* is not only the ideal fireproof floor covering, but it is a floor that guards the health of those walking and working on it.

Made of scientifically selected minerals, crushed and mixed with chemicals, *Mineral Flooring* is laid like plaster over old or new floors and forms a fireproof, one-piece, sanitary, warm floor covering. A floor covering that gives protection from fire, from wear, and from ill health where damp cold floors are in use.

Don't accept a substitute for a *Mineral Flooring*. Be sure you get a Mineral Composition Floor manufactured by the Philadelphia Mineral Flooring Company and laid under the supervision of our flooring experts. In no other way can you be certain of obtaining a permanent, fireproof composition floor covering.

## As The Editor Sees It

WE would not, as free American citizens, question the right of individuals to strike. But when such disorders as the police strike of Boston and such national disasters as the more recent coal strike occur, it is time to go deeper than the mere satisfying of demands for higher wages. Issues are at stake involving the very soul of Americanism and problems must be solved now and for all time—problems which have been unheeded but none the less existed for years. That there is fault on the side of the unions is true; it is, however, true that there is fault on the side of the employer and it is only fair to examine the salient points of the situation from every angle. Some interesting sidelights on the situation in the coal fields are given by *Manufacturers News*, which states that—

“There are 90,000 men and boys in Illinois, or somewhere like that number, who are practically in as much slavery as the colored man was before the civil war. They are not put up on any auction block and sold to the highest bidder, nor is the lash of a blacksnake whip applied to their bodies, but in every other sense of the word they are slaves.

“For twenty years labor union officials have bullyragged the legislature into passing mining laws and they now have it fixed so that no man can dig coal in Illinois unless he belongs to the union and no man can join the union unless he

sells his birthright to the union officials.

“Now, *Manufacturers' News* stands for protection against accident to the very last degree and it is in favor of barring from the coal mines the drunken, the careless and the inconsiderate, but it does not understand why it is necessary to break the spirit of a man who wants to follow the honorable vocation of working in the bowels of the earth by making him join a union headed by some big bully or some overbearing, domineering socialist whose principles are antagonistic to liberty, life and happiness.

“How many people in the State of Illinois, outside of those engaged in the coal industry, know that there is a statute which provides for the organization in each county where coal is mined of a board of three practical miners who are appointed by the county judge for the purpose of investigating and determining the competency of applicants for work in coal mines? We think we are safe when we challenge anyone who may be interested to produce the name of a man on any of these boards in counties where there is considerable mining who is not dominated by the union.

“Most of the other states, outside of West Virginia and Pennsylvania, having coal fields are bound as tightly as is Illinois.

“Who puts on the shackles?”

Such conditions as these are, of course, essentially un-American, and can only be

overcome by radical change in the industrial fabric. We must understand just what it is that the workingman is aiming at, just what is causing the unrest and dissension of this critical period. Of course, it is well known that in many cases strikers do not realize just what they are striking for. The real remedy lies in taking away causes of dissatisfaction and unrest. In President Wilson's message to Congress, he said, referring to the workingman and his wants, it is his desire to make the conditions of his life and the lives of those dear to him tolerable and easy to bear.

Let us be frank about this solemn matter. The evidences of worldwide unrest which manifest themselves in violence throughout the world bid us pause and consider the means to be found to stop the spread of the contagious thing before it saps the very vitality of the nation itself.

Do we gain strength by withholding the remedy? Or is it not the business of statesmen to treat these manifestations of unrest which meet us on every hand as evidences of an economic disorder and to apply constructive remedies wherever necessary, being sure that in the application of the remedy we touch not the vital tissues of our industrial and economic life. There can be no recession of the tide of unrest until constructive instrumentalities are set up to stem that tide.

PRINTS**

Governments must recognize the right of men collectively to bargain for humane objects that have in their base the mutual welfare of those engaged in all industries. Labor must not be longer treated as a commodity. It must be regarded as the activity of human beings possessed of deep yearnings and desires. The business man gives his best thought to the repair and replenishment of the machinery so that its usefulness will not be impaired and its power to produce may always be at its height and keep in full vigor and motion. No less regard ought to be paid to the human machine, which after all propels the machinery of the world and is the greatest dynamic force that lies back of all industry and progress.

Return to the old standards of wage and industrial unemployment are unthinkable. The terrible tragedy of war, which has just ended and which has brought the world to the verge of chaos and disaster, would be in vain if there should ensue a return to the conditions of the past.

Europe itself, whence has come the unrest which now holds the world at bay, is an example of standpatism in these vital human matters which America might well accept as an example, not to be followed, but studiously to be avoided. Europe made labor the differential, and the price of it all is enmity and antagonism and prostrated industry. The right of labor to live in peace and comfort must be recognized by government and America should be the first to lay the foundation stones upon which industrial peace shall be built.

Labor not only is entitled to an adequate wage, but capital should receive a reasonable return upon its investment and is entitled to protection at the hands of the government in every emergency.

The right of individuals to strike is inviolate and ought not to be interfered with by any process of government, but there is a predominant right and that is the right of the government to protect all of its people and to assert its power and majesty against the challenge of any class. The government when it asserts that right seeks not to antagonize a class, but simply to defend the right of the whole people as against the irreparable harm and injury that might be done by the attempt by any class to usurp a power that only government itself has a right to exercise as a protection to all.

In the matter of international disputes which have led to war, statesmen have sought to set up as a remedy arbitration for war. Does this not point the way for the settlement of industrial disputes, by the establishment of a tribunal, fair and just alike to all, which will settle

industrial disputes which in the past have led to war and disaster? America, discussing the evil consequences which have followed out of such disputes between these contending forces, must not admit itself impotent to deal with these matters by means of peaceful processes. Surely, there must be some method of bringing together in a council of peace and amity these two great interests out of which will come a happier day of peace and co-operation, a day that will make men more hopeful and enthusiastic in their various tasks, that will make for more comforts and happiness in living and a more tolerable condition among all classes of men.

Certainly human intelligence can devise some acceptable tribunal for adjusting the differences between capital and labor. This is the hour of test and trial for America. By her prowess and strength and the indomitable courage of her soldiers, she demonstrated her power to vindicate on foreign battlefields her conceptions of liberty and justice. Let not her influence as a mediator between capital and labor be weakened and her own failure to settle matters of purely domestic concern be proclaimed to the world.

There are those in this country who threaten direct action to force their will upon a majority. Russia, today, with its blood and terror, is a painful object lesson of the power of minorities. It makes little difference whether that minority is capital or labor, or any other class, no sort of privilege will ever be permitted to dominate this country. We are a partnership or nothing that is worth while. We are a democracy, where the majority are the masters, or all the hopes and purposes of the men who founded the government have been defeated and forgotten.

In America there is but one way by which great reforms can be accomplished and the relief sought by classes obtained, and that is through the orderly processes of representative government. Those who would propose any other method of reform are enemies of this country. America will not be daunted by threats nor lose her composure of calmness in these distressing times. We can afford, in the midst of this day of passion and unrest, to be self-contained and sure.

The instrument of all reform in America is the ballot. The road to economic and social reform in America is the straight road of justice to all classes and conditions of men. Men have but to follow this road to realize the full fruition of their objects and purposes.

Let those beware who would take the shorter road of disorder and revolution. The right road is the road of justice and orderly process.

The truth of President Wilson's generalities is borne out by the specific example of the Hydraulic Pressed Steel Co. of Cleveland. As told by Ernest E. Bell, Vice-president of that Company, in *Building Industry*, Mr. Bell's article, "Management's Responsibility to the Human Element in Industry," follows:

\* \* \*

#### Managements Responsibility to the Human Element in Industry.

By ERNEST E. BELL.

The question of the relationship between Capital and Labor is more potent today in possible results, either for good or evil, than any question that has ever faced the civilized world. It is a question upon which volumes have been written by sociologists and economists, and upon which oratory has been expended by many politicians and a few statesmen.

At Hydraulic we recognized the importance of reaching a right solution of this problem some seven years ago, but more recently we have come to realize that the preservation of our industrial life depended upon reaching this solution quickly. And those responsible for the conduct of the Hydraulic business, Hydraulic management, considered the solution of this problem as worthy of their most careful analysis and consideration, as it became vital, not only to profit-earning, but industrial existence.

We are manufacturers. Production is one of our vital problems. Production consists of the application of labor to material largely through mechanical operation. In our mechanical operations we employ engineering and mechanical experts, chemists, physicists and specialists of every character, to locate the causes of undesirable or unprofitable results in production. The labor problem is that of human element in production. Why, therefore, is it not common-sense and good business to apply the same general principles in locating difficulty with the human element as with the material element? If we must analyze the material which goes into our product—subject it to the scrutiny of the chemist and physicist, in order to locate the cause for unsatisfactory results, why should we be less diligent in our study and analysis of the human element, to find its reasons for unrest and dissatisfaction in the industrial relationship?

Man, since his creation, has been endowed with some attribute which demands the recognition and preservation of his self-respect. Since the dawn of history fundamental causes of war and bloodshed have been strife for the right of self-expression—for the maintenance of self-respect. So long, therefore, as we

(Continued on Page 824.)

## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

## **SHEETROCK**

### **WALL BOARD**

SHEETROCK is made of the same material as the scratch coat of plaster. SHEETROCK is manufactured in wall board sizes. It has wall board's ease of handling and is made of pure gypsum rock sandwiched between mineralized paper coverings.

This scientific, fireproof wall board will fill any plastering need. It takes any kind of decoration—wall paper, paneling or papering.

SHEETROCK makes a quicker, cheaper job than plaster and as serviceable. No unknown

factors to worry about when you use Sheet-rock, for it is plaster in wall board form; you can forget labor troubles, material troubles and time troubles.

SHEETROCK can be used in its clean natural gray color without the finishing coat you must give plaster, or SHEETROCK can be panelled, papered or painted to suit any fancy or taste.

Write for the SHEETROCK catalogue.

**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

**WILLIAM M. LLOYD COMPANY**

Established 1868

29th and Ridge Avenue

PHILADELPHIA

sky, 2223 North Thirty-third street, Philadelphia. January 8, 1920, for changes, etc., the United States post office at Springfield, Ohio. Drawings and specifications may be obtained from the custodian of the building, Springfield, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 10, 1919. Sealed Proposals will be received at this office until 3 P. M., January 5, 1920, and then opened, for remodeling the United States post office, Fitchburg, Mass., in accordance with the specifications and drawings mentioned therein, copies of which may be had at this office or at the office of the custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### PROPOSALS FOR ALTERATION OF BUILDING.

PICATINNY ARSENAL, Dover, N. J., December 4, 1919.—Sealed proposals for altering building No. 117, will be received until 1 o'clock P. M. on December 22, 1919, and then opened. Information furnished on application to Commanding Officer, Picatinny Arsenal, Dover, N. J.

(Continued from Page 812.)

fail to heed this irresistible demand of human nature, so long as we confine our effort to find the solution of the labor problem in the adjustment of time clock and the pay envelope, just so long we have no reason to expect satisfactory results. And the history of industry furnishes conclusive evidence that in the relationship which has existed between employer and employee, this human attribute has not been reckoned with; that those who work with their hands, those who have nothing to place upon the market of industry but skill and brawn, have not been treated in such manner as to show recognition or appreciation of their self-respect, have not been given opportunity for self-expression in industry, and have not been brought to the full measure of development and usefulness through the stimulus which comes from a consciousness of individual responsibility.

It is said, Labor has gone mad and men have become unreasonable, irrational in their thinking and irresponsible in their acting, and it must be admitted that some men have. A great English statesman has said that you cannot draw an indictment broad enough to cover a whole nation. And can we, in justice to the very large majority of those who constitute the labor class, conclude that *all* Labor has gone mad? It seems that some have gone mad, have become irrational in their thinking, in their demands and actions. But will the application of the fundamental causes to which we have referred give any light on this particular question? What is the character of the men who constitute the irrational—the extreme—element? Is it not the individuals in almost every instance who have failed to find opportunity in their employment for the cultivation and preservation of their self-respect, for the opportunity of self-expression, and who have never been given the privilege of bearing their share of industrial responsibility?

And to go further with our reasoning, and as further proof of the rightness of our premise and our conclusion, the irrational, wrong thinking, wrong acting individual is one invariably in whom Na-

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.  
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

ture has most pronouncedly implanted this irresistible demand for these things, and who, through lack of opportunity to satisfy this demand in right pursuits, has broken the bonds of restraint and made his own opportunity.

#### LABOR DEMANDS ONLY A SQUARE DEAL.

But assume that the irrational element is irredeemable. Is it the part of Wisdom for Capital to sit idly by and let this irrational element influence those who would be rational, those who only want a square deal and fair treatment and will be happy and content in the knowledge that they are getting it? By what logic or reasoning can we justify ourselves as good business men, if we let this irresponsible element pervert the minds of those who would be rational and sensible, through feeding them with falsehoods, holding out to them impossible promises of results and gaining their confidence and their co-operation because we don't tell Labor the whole truth and treat them as square, straight, rational, human beings. Experiences with our own men lead to but one conclusion, and that is that 98% of the so-called laboring class want to be square and are asking only for a square deal.

In the earlier days Ownership and Management were represented in one individual. When the corporation was born, Management was vested in a separate individual and became a distinct function in business operation. Quite naturally, however, on account of Ownership and Management previously having been one, Management became the servant of Ownership, with a sense of responsibility to Ownership exclusively. With Ownership and Management as one, Ownership had had direct contact with Labor. With Management interjected between Ownership and Labor, it constituted the only source through which Ownership could be informed of the attitude or demands of Labor. But Management was dependent for its job upon Ownership, or at least thought it was, and Ownership demanded dividends, and Management's ability to hold its job became dependent upon ability to produce them.

Labor was making demands upon Management, but the development of the situation seemingly forced Management to drive Labor to the extreme in order that it might have its record clear with Ownership by the production of satisfactory dividends. Through this development of circumstances, through the failure of Management to recognize its responsibility to Labor equally with Capital, a proper consideration of Labor's attitude

toward the business was largely overlooked in the transition period. Management employed every known means to develop cost saving and profit producing mechanical methods. Management acted with unquestioned intelligence in the matter of the analysis of production as it affects its engineering, mechanical and scientific problems. But has Management acted with the same degree of intelligence in the analysis and development of the human element, without which, in the final reckoning, there will be no progress and no profit?

But, you say, that statement is too broad—that instances are frequent where Management, with the full approval of Ownership, has been kind and considerate to employees, where they have provided good working conditions and given such things as are generally included in the term "welfare," and still men were dissatisfied. We don't deny it. We know it to be a fact. Granted that these things may have been done with the greatest consideration and the maximum of human kindness. Labor doesn't want pity or kindness. It need not ask them. It has two strong arms with which to earn all that it requires of the world's success. It does not want things to be given it because employers are kind, and if it did, it would not represent, as it does represent, the potential power for industrial progress that is to be found in the human element if properly treated with and properly directed.

#### WHAT LABOR REALLY ASKS.

And so we must go back to the basis established through our original analysis of the cause underlying the effect from which we are suffering. It is with that cause that industry must treat, and starting from that basis that industry must operate, if the full potential power of Labor in the development of industry is ever to be released and satisfactory relationships between the different elements which make for progress in industry are to be established. And what are these? First, the innate demand for the recognition and preservation of self-respect. The self-respecting human being is going to demand the recognition of those things which he believes to be his right. If certain elements in Labor have gone wild as to what constitutes their rights, is it not because we have permitted them to go wrong in their thinking and through failure to work with them in full recognition that they were human beings and men, just the same as we? In overcoming these irrational demands, our problem was to establish mutual recognition of

self-respect, then to get together and reason with each other. And did we find our Labor unreasonable when we did that? We did not. No man has got down to the root of human relationship but recognizes that, whether a man digs in the ditch or sits in the bank president's chair, he has the same human impulses, the same human troubles, and needs the same kind of help to bear them. Were our men exceptions? No. All men will be human and responsive, but only when we open our consciences and our hearts to the true spirit of human relationship.

And what comes next? When we have learned to respect each other as human beings, to have confidence in each other as fair thinking and square dealing, human men, we will have respect for the ideas and thoughts of each other. Each will have the opportunity for self-expression as it affects his relationship with the other, and this will lead to an opportunity for self-expression in the things to be accomplished, the things for which we are all working. If we have that true heart throb of human relationship, every individual will have the opportunity to accept his full measure of responsibility, and instead of the good in men being driven out, it will be cultivated and grow, and men will become stronger and more useful, each to his particular institution and to civilization. Is this sentimentalism, or is it good business, to develop in the human element, with the same degree of care, thought, analysis, and intelligence that we develop from the material element, those things which make for progress and profit?

The world war has shaken men from their old grooves of thought. Not only is political reconstruction imperative to Europe, but industrial reconstruction is inevitable the world over. And in this reconstruction, Industry must find some method by which the individual can exercise his right of self-determination with the same freedom and effectiveness that the right of franchise provides in free government. It must foster every possible means of preserving and promoting individual self-respect. It must insure to all the opportunity to accept responsibility. With these as our guiding principles, our experience in operation has been so eminently satisfactory that we believe this experience told to others might help direct their thinking and their action in the matter of industrial relationship. We knew that others were thinking on this same vital question and we hoped that an exchange of ideas might prove helpful in the task to which we have set ourselves.

#### UNITED WE STAND.

Of course, we have at Hydraulic welfare work, a Mutual Benefit Association, bonuses, profit-sharing, workmen's representation, co-operative stores, and all of those things which come simply as a natural result when mutual understanding has once been established, and Capital and Labor are working together for their mutual good. But we have not accomplished these material things through Management having taken to Labor a ready-made plan for their acceptance, in which Labor has had no voice, toward the forming of which it has given no thought, and in the carrying out of which it has no function. Innovations at Hydraulic are just as likely, and more likely, in fact, to be the result of suggestion from workman as from Management, through the Workmen's Representation Committee. Our method of workmen's representation makes it possible for the suggestion of every man to receive consideration, and every man knows this to be a fact. As a consequence of this, innovations at Hydraulic are not considered as for the benefit of the men alone, but as for the benefit of the business, and every man knows that that which is for the benefit of the business is for the benefit of every one associated with the business in whatever capacity.

And in this there is also the element of self-interest. We know that no matter what the relationship with our men might be, Hydraulic cannot stand alone in case of a general upheaval. We wanted, therefore, to exert every ounce of energy, and direct the best thinking of which we are capable, toward an early and permanent solution of this problem, so that our interest in Hydraulic might be preserved, both for the men who invest their money and for the men who invest their energy.

It occurred to us that even with the present high cost of living the average income for labor was such that the fundamental cause for existing unrest must be something bigger, something deeper, than the hours of toil and the rate of pay—that these demands were only an effect, a visible evidence of the real cause, a form in which the basic fundamental cause found expression. Industrial reconstruction may and undoubtedly will make necessary some readjustment in the division of material returns from the joint application of Capital and Labor to raw material in its conversion into finished product. This readjustment may benefit Labor in some instances, in others may benefit Capital. But we fear no permanent or satisfactory results are possible in quieting this unrest, so long as

we confine our efforts to the effect without treating with the cause.

And this fundamental cause we believe to be an inborn attribute of human nature, an instinct found in greater or less degree in every human being, a demand for the recognition of self-respect, for the privilege of self-expression, for the opportunity of individual responsibility. And no matter in what form this fundamental cause may find expression nor through what manner of detail we may meet these specific demands, human unrest will never be quieted until we recognize the fundamental cause, and adjust our operations to its demands.

Men have said, "You can shorten the working day, and increase the rate of pay until Labor gets it all, and still they won't be satisfied." And so long as we proceed to shorten the day and increase the pay without realizing that there is something deeper back of this demand than the high cost of living, that statement is true.

Why, then, is it not good common sense, good business, for us to so adjust our thinking and our doing that industry may benefit in full measure from the force for progress which is to be found in the human element? We don't fight natural forces, but adjust ourselves to natural laws in the utilization of material elements. And until industry shall have learned that all human beings are fundamentally the same, that all characteristics which prompt human action and stimulate human endeavor, are fundamentally the same, differing only in degree, and shall appreciate this fact and recognize it human relationships, industrial unrest will never be quieted and Labor will never be satisfied regardless of the hours of toil, the rate of pay or the cost of living.

**You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.**

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

## In Buildings Where Safety is Essential Mineral Flooring Meets All Requirements

STORES

RESTAURANTS

FACTORIES

HOSPITALS

CLUBS

98% fireproof by Government test, **Mineral Flooring** provides the safest practical floor covering for stores, restaurants, factories, hospitals and clubs.

**Mineral Flooring** is not only the ideal fireproof floor covering, but it is a floor that guards the health of those walking and working on it.

Made of scientifically selected minerals, crushed and mixed with chemicals, **Mineral Flooring** is laid like plaster over old or new floors and forms a fireproof, one-piece, sanitary, warm floor covering. A floor covering that gives protection from fire, from wear, and from ill health where damp cold floors are in use.

Don't accept a substitute for a **Mineral Flooring**. Be sure you get a Mineral Composition Floor manufactured by the Philadelphia Mineral Flooring Company and laid under the supervision of our flooring experts. In no other way can you be certain of obtaining a permanent, fireproof composition floor covering.

## Brownstone Bricks

2,000,000 at \$16.00 f. o. b. Reading Sidings.

These are high grade pressed bricks, manufactured of crushed stone and hydrated lime. Greater crushing strength and lower absorption than burned clay. Uniform in shape and size. No soft ones. They are beautiful, economical and everlasting.

## Red, Gray & Buff Face Bricks

A complete range of colors. Manufactured of vitrifying shale and fire clay. Our prices defy competition.

## Straight Hard, Stretcher and Salmon Bricks

All Shale Bricks in carload lots, delivered on job at competitive prices. We are shipping 200,000 bricks daily to 28 building operations.

## Vitrified Paving Bricks

Standard specification pavers at lowest market price.

## As The Editor Sees It

A PUBLIC speaker recently defined "Thrift" as "the wise expenditure of money for things of 'real' value." To many the word "thrift" spells hoarding rather than spending, but in many cases saving and hoarding are directly opposed to thrift. If, through the advice of a specialist, you save your life, the large doctor bill is certainly a thrifty expenditure.

In the matter of home building, many large concerns will testify to the real value received, in the form of increased production, lessening of labor turn over and contented workmen, from money expended in housing projects in connection with their various industries.

Many people hesitate today to put their savings into homes on account of the advanced cost. But real estate is "real" value. Homes are the foundation of the nation and an asset to the individual incalculable in dollars and cents. We believe that the "Own Your Home Idea" is one of the biggest in connection with Thrift Week and deserves all possible encouragement and impetus.

Furthermore, "every business man will reap direct benefits in commodities where National Thrift Week is made a success," says H. R. Isherwood of the National Lumber Manufacturers Association. But, continues Mr. Isherman, that selfish reason is not why we are going to get behind the Thrift Campaign and help put it over in a big way. It is be-

cause we are all good Americans and right now thrift is one of America's most vital needs.

National Thrift Week begins on January 17, Benjamin Franklin's birthday. The nation-wide campaign is to be conducted by the Y. M. C. A. But that doesn't mean that just because you have let your "Y" membership lapse you're not to hump your shoulders and push. The fact that you may never have been inside of a "Y" building will make your co-operation none the less valuable to the local "Y" campaign committee which will build up the Thrift Week organization in your town.

National Thrift Week will have eight days, and one day will be just as vital to the welfare of all of us as another. The days will be:

January 17—Start a Bank Account Day.

January 18—Share Your Income With Others Day.

January 19—Take Out Life Insurance Day.

January 20—Own Your Home Day.

January 21—Make a Will Day.

January 22—Thrift In Industry Day.

January 23—Family Budget Day.

January 24—Pay Your Bills Promptly Day.

I am going to talk about Own Your Home Day, because I am somewhat accustomed to discussing that subject. But I again want to emphasize that each of

the days is equally important.

If the Own Your Home idea can be "sold" in a community, the business men of that community will be deriving benefits for a long, long time afterward.

The sales of the furniture dealers will be increased if the Own Your Home thought takes root. New homes mean new furniture.

It's a waste of type to say that real estate men will be aware of the fact if the renters in a community decide that in the end they are to have deeds instead of collections of rent receipts.

It would be more than worth the while of a Plumbing Contractor to give the Thrift Campaign his personal and financial support for purely business reasons, to say nothing of the general welfare of the country. It will be the same with the architect, the mason, the hardware merchant, the electrical contractor, the painter, the lumber and building materials merchant, the heating contractor, and on along the line.

A home building movement will increase the business of insurance men. No, I do not mean only fire underwriters. If a man thinks enough of himself and family to start paying for a home, he will think enough of his family to take out life insurance to insure that the remaining payments will be met. Looking a little further into the future: when the last payment is made on the home, how easy it would be to direct that monthly

sum, which the man is in the habit of paying, toward life insurance.

I see actual, traceable results for the banker, lawyer, the security bond company or the building loan association, if the Own Your Home idea goes across in your town.

Don't wait for the local Y. M. C. A. committee to seek you out. Go to the committee. Write or phone that you would be glad to do your part toward making Thrift Week a success locally. Tell the committee that you will not only help personally, but also will contribute your share to the campaign funds. Your share will likely be much smaller than you suppose. A campaign of this sort is largely a matter of publicity, and publicity will be the principal expense of Thrift Week.

The Central "Y" Committee will send each local committee a catalogue of campaign supplies—posters, window display cards, motion picture trailers, etc. See to it that there is no shortage of publicity ammunition in your town.

Today I was in the Chicago laboratories of the Rothacker Film Manufacturing Company. The "Y" has selected this company to make the motion picture trailers which will be shown in the theatres Thrift Week.

I saw what the Own Your Home trailer will be like. It will be 100 feet long. One-fourth will be devoted to an animated drawing which will graphically drive home the advantage of owning your own home. The remainder of the trailer will be devoted to short, snappy arguments in favor of having a deed to the roof over your head. This will be one of the sentences: "You've got to pay for a home anyway; who will own it in the end, you or the landlord?" Another one: "The renter who sings 'Home Sweet Home' is kidding himself and serenading the landlord—Billy Sunday."

A movie trailer will be listed in the "Y" campaign catalogue at \$10. In a theater that has only 700 seating capacity one of these trailers will drive home the thrift gospel to 2,000 persons a day. By being exchanged among the theaters, the Own Your Home trailer can be made to work all eight days of the campaign. That will be 16,000 people for \$10.

The "Y" has ordered trailers on each of the eight days and those the Rothacker Film Company is making for Bank Day, Insurance Day, Pay Your Bills Day, etc., will be as good as the one on Own Your Home. Reaching 16,000 people for \$10 is cheap and there can be no question about the effectiveness of animated drawings backed by epigrammatical titles. See to it that the trailers are included in the order for campaign supplies for your town.

Forget your own merchandising during the Thrift campaign. Get behind the movement and sell the big Thrift idea. When you have the idea sold, there will be an increased demand for all you have to sell.

\* \* \*

Throughout the land building operations are again in swing. With the termination of the war and the lifting of the government's ban on materials there has been a most noticeable increase in building activities. It has not taken the architect and contractor to notice this healthy sign. Anyone moving around will see new homes and buildings rapidly reaching completion.

The building industry is experiencing its reward after a long period of stagnation. Even greater will be the stimulation of this industry in the near future. Builders and contractors are looking forward to a recuperation of losses sustained during the period of inactivity.

Many laborers are being engaged in these new activities. Contractors and other employers of labor have been asked to co-operate in making "Thrift in Industry Day" on the programme of National Thrift Week a success. Not only should the contractor know the value of thrift, but he should help teach the value of thrift to many of his employees ignorant of it.

It is a duty he owes to himself and to the country. By the exercise of thrift on the part of the individual this country will be enabled to extend larger credit to European nations whose economic salvation depends upon it. The Young Men's Christian Association, which organized National Thrift Week, asks the building industries of this country to co-operate in making it a success.

\* \* \*

Col. C. Lincoln Furbush, new appointed Director of Public Health of Philadelphia, has promised that early attention will be given to Public Comfort Stations. This is indeed commendable, as the City of Philadelphia is woefully lacking in this most vital necessity.

At a recent public meeting held in Witherspoon Hall, almost every phase of city planning and zoning was touched upon by distinguished speakers. While emphasis was laid upon decent housing and living conditions, comfort stations, a very important feature of city life was not mentioned.

It is especially pleasing to see that Colonel Furbush has included among the first matters which will receive his attention this essential feature of city planning.

In congratulating Colonel Furbush on his appointment, Mr. D. Knickerbacker Boyd, Chairman Executive Committee,

Philadelphia Planning Conference, said:

"While the placing of these vitally necessary public facilities lies within the functions of a City Planning Commission, may I not offer you now, in a preliminary way, such co-operation and assistance as may properly be secured by those within our organization most qualified to serve in this regard?"

"It will interest you to know that one of our constituent bodies has but recently adopted a Resolution on Public Comfort Stations which I am now for the first time making public in support of your proposition.

"It represents the action of twenty-eight thousand wage-earners of this City through their official body—the Council of Associated Building Trades—composed of local organizations of the Building Trades Department of the American Federation of Labor, and is as follows:

*Whereas*, the New City Charter makes possible a better Philadelphia, and

*Whereas*, among the principal Agencies for such betterment will be the City Planning Commission and the Zoning Commission contemplated therein to be established by the Administration, and since these Commissions will deal with the general improvement and the beautification of our City, be it

RESOLVED, That Comfort Stations be established throughout the City for the relief of its inhabitants, at the earliest possible convenience.

## WATERPROOFING WITH IRON

By CARROLL BEALE, C. E.

A number of years ago in England powdered iron was used in combination with water and salamoniac to stop leaks in pipes and boilers. On one occasion the masonry walls of a machine shop leaked badly and a mechanic familiar with the use of iron dust for repairing leaky pipes thought that he would try it out on a masonry wall on the theory that the oxidization of the iron caused by mixing the same with water and salamoniac would cause the iron to expand, and fill up the surface pores of the masonry, preventing water from coming through. It so turned out that his theory was well founded as waterproofing with iron today has become an established business over the entire country and is used in every branch of masonry waterproofing, and while there are more than fifty waterproofing methods and compounds known to the writer, all of which are generally known among the building fraternity, powdered iron or "Ironite," as it is commercially known, has not only taken its place among them for new construction work, but has a specific field of its own in filling a long felt want in

(Continued on Page 844.)

## We Can Save You Money on Insurance Premiums

**By Assisting You in the Planning and Construction of Buildings**

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

*If You Can't Get Plasterers*

Let **Tague** Solve  
Your Problem with

**SHEETROCK**  
WALL BOARD

You know the cost of material and labor—if they are obtainable. You know the time lost and profit gone up in smoke caused by delay. Sheetrock, the plaster in wall board form, will eliminate your plastering difficulties.

Made of Gypsum rock, this wall board fills every need of builders for a material they can use instead of plaster.

It is the same pure gypsum rock found in the scratch coat of all good plaster, made in ceiling high, easily handled, wall board sheets.

And Sheetrock won't shrink, bulge, warp, nor burn. It takes any wall decoration,—paint, paper or panel work.

Use Sheetrock—save time, money and material.

**What Builders Need**

In their advertising merchants are apt to talk about goods—but listen to their *customers*, and nine times out of ten you will find that they are talking about *service*. It's the great force of modern business.

Lumber sold by different dealers is very much alike; but there is a great difference in *service*.

The best service you can get is none too good. When you build that new factory or store, the important thing is to choose the lumber dealer that will give you the prompt, efficient *service* that to builders so often makes the difference between failure and success.

Some day you will build. If you want the work finished on time, see that the lumber comes from LLOYD.

## Proposals

### INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 11, 1919. Sealed Proposals will be opened in this office at 3 P. M. January 8, 1920, for changes, etc., the United States post office at Springfield, Ohio. Drawings and specifications may be obtained from the custodian of the building, Springfield, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 10, 1919. Sealed Proposals will be received at this office until 3 P. M., January 5, 1920, and then opened, for remodeling the United States post office, Fitchburg, Mass., in accordance with the specifications and drawings mentioned therein, copies of which may be had at this office or at the office of the custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### PROPOSALS FOR ALTERATION OF BUILDING.

PICATINNY ARSENAL, Dover, N. J., December 4, 1919.—Sealed proposals for altering building No. 117, will be received until 1 o'clock P. M. on December 22, 1919, and then opened. Information furnished on application to Commanding Officer, Picatinny Arsenal, Dover, N. J.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Dec. 15, 1919. Sealed Proposals will be opened in this office at 3 P. M., January 8, 1920, for remodeling the United States Post Office building at McKeesport, Pa. Drawings and specifications may be obtained from the Custodian of the building at McKeesport, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 832.)

curing old masonry in damp and wet cellars, basements, tunnels, viaducts, and even the exterior masonry walls of ordinary buildings.

As before stated, the entire theory of this class of waterproofing is based on the expansion of the iron particles due to oxidation. The applications are made with ordinary brushes directly on the masonry walls or floors and consist of iron coats containing various percentages of iron, cement and sand, from a straight iron coat of simply iron and water to cement slush coats containing as little as 5 per cent. iron.

For ordinary concrete walls, usually six brush coat applications are necessary. First, the concrete surfaces are thorough-

ly scrubbed down with acid, sprayed with a garden hose, and all loose and faulty places chiseled out and pointed up with cement and iron. Then it is customary to apply two coats of straight iron, a third coat of iron and cement known as a slush coat, then two additional straight iron coats, finishing with a cement slush coat, furnishing the appearance of ordinary cement work.

These specifications vary, of course, to fit the specific case in hand. For instance, work above ground and not subject to water pressure requires fewer coats than a cellar wall or the wall of a reservoir. On brickwork or stonework below ground, a thin plaster coat is applied, whereas above ground this becomes unnecessary, the applications being made directly upon the masonry itself.

In this class of work the coats must be applied directly to the naked masonry. Such waterproofing is only effective when so applied. Applied to stucco or pebble dash work, hair or sun cracks are apt to develop in the surface, in which case, of course, the iron cracks with it, so it is absolutely essential that the coats be applied only to the naked masonry construction.

For walls above ground, this type of waterproofing is adopted to concrete, brick, stone, or concrete blocks. In all of this work the finished or completed surface has the appearance of cement, though for architectural reasons the finishing coat may be colored any color if sufficient care be taken in securing a uniform mixing of the coloring to secure a uniform color. Cement is far more certain as a finishing coat.

In a leaky basement, investigations almost invariably shows the water comes in between the wall and the floor. Due to the custom of laying the basement floor as an independent operation from the walls, there is of necessity a construction joint at this point. To seal this, a cove about 3 in. deep and 3 in. wide is chiseled out between the floor and the wall and pointed up in three operations with cement and Ironite, and then built up about 3 in. above the floor and bevelled off. Next the wall is treated as before stated by coating the same to a height of the grade outside. These two operation will usually seal an ordinary cellar, but very often when this is done the water rises through the floor itself. In this case the floor is eaten off with Muriatic acid, treated with about four coats of iron and a protecting coat of 1½ of cement finish laid on top of it, as Ironite, while a floor hardener in itself, will not form a permanent wearing sur-

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. **DAVID FRANCE CO.,**

# An Architectural and Building Trades Directory OF PHILADELPHIA

Will be Published in

**BUILDERS' GUIDE**

January, 1920

It is our aim to make this a complete, up-to-the-minute directory for architects, contractors, builders, sub-contractors, material men and the building trades.

To insure proper listing under your line send in at once your name and address, business classification, Bell Telephone Number and Keystone Telephone Number.

Rates for display space on application.

**BUILDING NEWS PUBLISHING COMPANY**

PERRY BUILDING, PHILADELPHIA

Spruce 1611-12

Race 2799

face where there is much abrasion. Careful investigation should be made as to the structural integrity of the floor before the waterproofing is applied as it has sometimes happened that when the walls have been completely sealed the upward water pressure has been sufficient to buckle the floor itself. On new floors it is customary to split the floor slab when applying this type of waterproofing. That is to say if the floor slab is 6 in. thick, 4½ in. of this will be laid and then the iron applied and the remaining 1½ in. of the floor put down. In this connection, it might be well to add that the iron coating forms an efficient and permanent bond in binding old concrete to new.

Some of the advantages claimed for this type of waterproofing as applied to concrete construction may be summarized briefly as follows:

1. This waterproofing is not applied until the concrete work is completed and has finished settling and shrinking.

2. It does not require the vigilance of inspection required to properly waterproof concrete by the admixture of ordinary integral waterproofing compounds. The leaks are visible and known before you commence to remedy them. Assuming a leak to be a disease, an integral waterproofing may be classed as a precaution against this disease, the type of waterproofing herein described as a cure.

3. It is not affected by hot steam and hot water pipes as is the case with bituminous waterproofing compounds.

4. It can be applied to the inside of the walls of a basement without requiring the digging up around the outside of the building.

5. It requires no protecting brick wall to prevent the external water pressure from pushing off the waterproofing. This material penetrates and forms an integral part of the wall itself and there is nothing to push off.

6. Waterproofing the inside of the wall, even though the wall itself be thoroughly saturated with water, protects the steel reinforcement in the wall from rusting out because of the well-known principal of steel corrosion, that latent or still water in concrete in combination with the lime in the cement, forms a coating on the steel reinforcement which permanently prevents the steel from corrosion. If the water flows freely through the wall, then there is no coating of the steel; the reverse happens and the steel corrodes.

7. Iron waterproofing having no sensible thickness within itself, offers clearances on old masonry work afforded by no other material. This is extremely im-

portant in pipe tunnels, subways, grain elevator pits, etc., where every fraction of an inch counts. Pipes ½ in. from the ceiling or wall can be worked around without removing them.

8. Aside from hydrochloric acid, this material will hold any liquid and is used extensively not only in waterproofing, but in oilproofing of concrete oil tanks, etc.

9. For concrete exterior walls above ground, where appearance is an important factor, three or four cement slush coats of iron give the wall a pleasing, smooth finish of uniform cement color, at the same time dampproofing the wall.

10. The cost of the material, it is claimed, compares favorably with any other waterproofing.

Like every other mechanical trade, about 90 per cent. of the trick is in knowing how to do the work. While this material has been generally used throughout the West and Middle West for about ten years, it has only recently come into use in the East. Among the many interesting examples of this work in this locality are the cafeteria on the roof of the S. B. & B. W. Fleischer Mill, Philadelphia, the exterior walls of the club rooms of the Hotel Traymore at Atlantic City, the U. S. War Risk Insurance Building, Washington, D. C., the U. S. Sub-Treasury Annex, Washington, D. C., the basements in the Yorkship Village, Camden, N. J.

This material has been used extensively in refrigerating plants, and among the examples of this class of work are the Bevo Plant in St. Louis, and the Anheuser-Busch Brewing Co.'s plant. For soap manufacturing plants, etc., the Lux plant in Boston is a good example of the waterproofing of concrete holding acids and fats.

#### MODERN HIGHWAY BUILDING IN MINNESOTA.

By J. B. WOODBURY.

Two successful road plants, nearly identical, are being operated on different sections of the Jefferson Highway in Minnesota by the General Contracting Company of Minneapolis. One outfit is at work near St. Cloud and the other near the village of Osseo, about twenty miles from Minneapolis. The Jefferson Highway is the big North and South route which ultimately will connect Winnipeg and New Orleans. These two plants are so designed that as much of the work as possible is handled mechanically. All of the stone is handled by machinery and stone constitutes two-thirds of the material which makes up pavements.

The pavement is 15 ft. wide with a 5-in. base covered with a 2-in. surface of bitulithic type. The mix is 1:2:6 and at first the capacity of the plant was about 1,800 sq. yd., but changes in the specifications for the mix reduced the quantity to about 800 sq. yd. per day, which means about 500 lineal feet. Six miles have been built this year with the plant.

When first operated, the mechanical loader was not a part of the plant, but since its purchase four men have been eliminated and at present twenty men are all that are needed on the entire job. The plant consists of a self-feeding bucket loader, conveyor, a mixer and paver, and tamping and finishing machine. The twenty men are working as follows:

- 1 loader operator.
- 4 sand shovelers.
- 2 conveyor operators.
- 1 cement handler.
- 3 paver operators.
- 2 men on finishing machine.
- 3 men laying forms.
- 4 extras.

The total of twenty men does not, of course, include the men who operate the trucks which haul the material to the job.

The sand and stone are delivered in 5-ton trucks and dumped in windrows. The cement in sacks is piled at the side, to be used as needed. After a little experimenting a method was worked out so that this piling could be done in such a way that the subgrade could be kept clean as the work progressed and yet at the same time an adequate supply would be available. The working space is limited by the length of the conveyor, but is flexible enough to allow for slight errors in spacing the loads to be dumped in windrows by the trucks.

The loader picks the material off the subgrade by means of revolving discs and discharges it into measuring hoppers provided for the sand and stone. These are mounted on rollers which move along the frame of the conveyor, enabling the men to shovel the sand or load the stone at any point along the 40 feet of its length. The hoppers also are adjustable to provide for different mixes. When they are filled by the bucket loader and the men, they are tripped, the material falling on the belt of the conveyor, which carries it directly to the skip of the mixer.

The skip is lowered to receive the aggregate thrown into it by the conveyor belt and at the same time the cement is added from the sacks by hand. The conveyor then stops while the skip is raised to transfer the batch to the mixer. The

skip then is lowered again and the operation is repeated, the measuring hoppers having been refilled in the meantime. The tamping and finishing machine then completes the job.

It was found that it is possible to keep the paver working all the time, but the loader is not in continuous operation as it and the men shoveling sand work a little faster than the mixer.—*Successful Methods.*

\* \* \*

## WOODEN HOUSES IN NORWAY

The demand in England for wooden houses is attracting particular attention in Norway, says the Christiania correspondent of the *London Times* in a recent issue. The chief factory for the manufacture and export of ready-made houses is near Christiania, the house made being ordinarily of six rooms, but varying in size, style, conveniences, and therefore in price. All the woodwork is ready for reconstruction and many of the houses can be delivered f. o. b. Christiania in six weeks after the order is received.

The Norwegian correspondent says: "The wooden house is a dwelling suitable for all climes, but it is naturally important to study the climatic conditions in each particular case. It is generally admitted that wooden houses form very healthful dwellings and they are not affected by damp and chilly weather, like brick houses; they are also clean, free from dust, and airy. By certain adaptations they can be made to meet all contingencies of weather.

"As regard durability, wooden houses can fairly be said, after a century's experience in Norway, to last as long as brick, if kept properly in repair. The apprehension commonly prevailing that wooden houses are dangerous from the point of view of fire is unfounded, as the ceilings, panelling, stairs, doors and windows are the same as in brick houses, and consequently the risk of fire is practically the same.

"The wooden house industry in Norway after 35 years' experience has now developed to great perfection, and the wooden dwelling offers a satisfactory solution of the housing problem."

\* \* \*

## DEFINING COST

The following are five broad definitions of cost terms:

Cost of production includes money outlays, debits incurred, proprietary losses of normal income and compensation for risks involved in production.

Cost may be divided into two classes of business debits:

1. Debits of the business to others than the proprietor.

2. Debits of the business to the proprietor.

In well-kept ledgers all the first-named class of costs will be found, either as property costs or as operating expenses, but it frequently happens that not all—and sometimes not any—of the second class of costs is entered in the ledgers.

Costs of production may be divided into two parts:

1. Direct costs.

2. Indirect costs.

Direct costs are those directly assignable to a group of similar units of product without pro-rating.

Indirect costs are costs that cannot be directly assigned to a group of similar units, but must be pro-rated among different groups of units.

Unit cost is the cost per unit of product, and is determined by dividing the total cost assigned to a group of units of product by the total number of units.

A unit cost includes all the direct costs and it may include all or nearly all the indirect costs, depending upon the method of accounting or cost analysis.

In appraisal work, as well as in estimating the cost of projected work, it is customary for engineers to use unit costs that include only part of the indirect cost, the remainder of the indirect cost being called "overhead cost."

Overhead cost is that part of the indirect cost not included in the unit costs.

No hard and fast line can be drawn between unit cost and overhead cost. It is entirely a matter of more or less arbitrary definition. If a company does its construction work by contract, the contractor's *unit prices* are the company's unit costs; but the contractor's unit prices include all of *his* overhead costs. Hence, if a company does its construction with its own forces, its overhead costs will ordinarily be greater than if it does its work by contract, due to the differences in accounting.—"Successful Methods."

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

People who want to buy things do not catch the seller, chloroform him and cram the orders into his pocket.

Advertising is the proper education of the public as to where the thing can be found, and therefore it is a necessity.

We are parts and particles of each other, but a little of the kindly glue of human brotherhood is needed to fasten us together. The policeman who keeps the crossing clear, and at the same time informs us as to the location of the post office and the First National Bank, no doubt is, in one sense, an economic waste. On the other hand, he is an economic necessity. He is a necessary middleman.

He relieves the congestion of traffic and granting the hypothesis that he does not misdirect us as to the location of the post office, he speeds us on our way.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

## As The Editor Sees It

THE publishing of this issue closes the most successful year in the history of the GUIDE, as is the case with all concerns interested in architecture and building. Nineteen nineteen has gone far beyond other years in volume and in success for the Building Trades. True there have been disorders and high prices, but a more flourishing condition has not existed for many years. Those whom we are serving have, by their recognition of our efforts in the BUILDERS' GUIDE and the *Daily Building News*, brought good cheer to us; and during this happy season of good fellowship, when inspirations of human affection abound on all sides, we cannot refrain from giving voice to our gratitude toward those who have contributed their generous support to making our service a success. Nineteen twenty opens with most brilliant prospects for the building industry. The great shortage of all kinds of buildings forecasts an immense volume of work to be designed and constructed with dispatch, and the good cheer that permeates the air everywhere in these joyous days should be continued throughout the entire year.

There is just as much good cheer in the lives of all of us as we ourselves produce. Good cheer, like quality in an article of merchandise, cannot be simply hoped or argued into existence. It must be created and put there. The spirit of good fellowship is in the heart of all of

us. Some people show it now and then. Others show good fellowship every day of the year.

The roses, sunbeams, pleasures, friendships that are created in spirit by our own mental attitude—and by our actions in associating with our fellow men—help to make life truly worth living.

The holiday season sets an example of the good cheer spirit. It shows people what a happy world they can make it—if they all get together and really try. Smiles make smiles. Laughter makes laughter. Kind words start the ball rolling with more kind words. A snappy, jovial, whole-hearted greeting is contagious. Most of the problems in life could be solved if we all tried to treat the other fellow as we would have him treat us. Our measure of happiness is governed by the amount of happiness we give to others. Kindness is a greater power in leadership of men than harshness. Christmas gives us all a taste of the happiness that is possible always—if we feel and do all the time as we feel and do at this season of the year.

The spirit which pervades our souls at this season is typified by service—service to mankind which does not deem the gain to self of paramount importance. Never has the world so stood in need of unselfishness and conscientious service as it does today, and this want can best be filled by carrying the holiday spirit—

which, after all, is the Christ spirit, with us through the year.

Why not a spirit of co-operation all the year around?

As we all know too well there is something lacking in the feeling existing between architects and the building trades—something that does not savor of co-operative spirit. Architects too often display a feeling of superiority by refusing to see contractors, sub-contractors and material men and, at times, possibly inadvertently, arouse a spirit of resentment.

Everyone has his sphere of usefulness which he can dignify by conscientious service, and in so doing each merits the recognition and respect of his fellow men.

No greater sphere of usefulness exists today than that occupied by those on whom rests the task of reconstructing the world. Building is no longer merely the putting together of structures; it embraces a much greater field and concerns itself with city planning and zoning; community life; the establishment of real homes. Never have greater opportunities obtained for the realization of high ideals in construction work of all kinds. Of course, there are obstacles to be surmounted; the path in many places is untried, and only by honest effort and a spirit of co-operation can the highest ideals for humanity be realized.

Would not closer contact between all the organizations and agencies entering

into the planning and constructig of buildigs promote greater opportunity for the realization of efficient service in the great building projects which are upon us?

At this time is it not ripe to suggest that the members of the architectural profession and the Builders' Exchanges embracing all branches of the building trades develop closer affiliations?

Why not frequent meetings at the Exchange Buildings, luncheons with appropriate talks and then open meetings, or dinners followed by discussions of vital questions arising from time to time? At least something more than has been customary should be inaugurated with the idea of fostering better acquaintanceship and closer appreciation of the problems that daily confront those in the architectural and building fields.

Let us incorporate the spirit of co-operation and service into our work and nineteen hundred and twenty will indeed be a happy and prosperous year.

\* \* \*

#### ESTIMATING BRICK WORK.

By I. P. HICKS.

Brick, as made by different manufacturers, vary in size, and, of course, there is sure to be more or less variations in the actual quantities required for certain jobs; the variations depending upon the size of the brick and the size of the mortar joints made in laying the brick. For the purpose of estimating we will assume as near as we can the average size of brick as we find them on the market. For the common brick we will assume it to measure  $8\frac{1}{4} \times 4 \times 2\frac{1}{2}$  inches and that the wall is to be laid up with a  $\frac{3}{8}$ -inch mortar joint.

For this kind of a wall figure 6 brick to each square foot of wall for every 4-inch thickness of wall. Thus, for a wall 4 inches thick, figure 6 brick per square foot; for an 8-inch to 9-inch wall, figure 12 brick per square foot; for a 12 to 13-inch wall, figure 18 brick per square foot; for a 16 to 17-inch wall, figure 24 brick per square foot and so on, adding 6 brick for each 4-inch thickness of wall.

To be very accurate in the number of brick required, deduct the brick required for all openings. In small foundation work, where there are only a few small cellar window openings, it is hardly worth while to deduct the openings, but for the main windows and doors in a brick building, it becomes necessary to deduct the brick for the openings, otherwise the result would be far too many brick.

#### BRICK FOOTINGS.

Brick footings, based on steps or off-sets of 2 inches, may be estimated by

the lineal foot, as follows: For a 9-inch wall, 2-course footing,  $10\frac{1}{2}$  brick; 13-inch wall, 3-course footing,  $22\frac{1}{2}$  brick; 18-inch wall, 4-course footing, 39 brick; 22-inch wall, 5-course footing, 60 brick; 26-inch wall, 6-course footing,  $85\frac{1}{2}$  brick.

#### PRESS BRICK.

For a standard size of press brick we will assume the following dimensions:  $8\frac{1}{4} \times 4 \times 2\frac{1}{4}$  inches, and the mortar joint to be  $\frac{1}{4}$  inch. This will require 7 brick per square foot for every 4-inch thickness of wall.

#### MORTAR FOR BRICKWORK.

##### LUMP LIME MORTAR.

The quantity of material required to lay 1,000 brick with a  $\frac{3}{8}$ -inch joint, using 1 to 2 lime mortar, composed of 1 part lime putty to 2 parts sand, will be  $1\frac{3}{4}$  barrels of lump lime and  $\frac{5}{8}$ -cubic yard of sand.

##### HYDRATED LIME MORTAR.

For mortar composed of 1 part hydrated lime and 2 parts sand, figure  $6\frac{1}{2}$  50-pound sacks of hydrated lime and  $\frac{5}{8}$ -cubic yard sand per 1,000 brick.

##### CEMENT MORTAR.

For 1 to 3 cement mortar composed of 1 part Portland cement and 3 parts sand, figure 5 sacks of cement and  $\frac{5}{8}$ -cubic yard of sand per 1,000 brick, with a  $\frac{3}{8}$ -inch mortar joint. Approximately  $21\frac{1}{2}$  bags of cement and 1-3 of a cubic yard of sand will be required if laid with about a  $\frac{1}{4}$ -inch joint.

##### CEMENT AND LIME MORTAR.

Figure 1 sack of Portland cement,  $\frac{3}{4}$ -barrel of lump lime and  $\frac{5}{8}$ -cubic yard of sand per 1,000 brick laid in the wall with a  $\frac{3}{8}$ -inch mortar joint.

#### ESTIMATING BRICK FOR CHIMNEYS.

SIZES GIVEN ARE INSIDE OF FLUE MEASURE.

8x8 flue, 24 brick per lineal foot.  
8x12 flue, 28 brick per lineal foot.  
12x12 flue, 32 brick per lineal foot.  
12x16 flue, 36 brick per lineal foot.  
16x16 flue, 40 brick per lineal foot.  
8x8 double flue, 40 brick per lineal foot.  
8x8 and 8x12, two flues, 44 brick per lineal foot.  
8x12 double flue, 48 brick per lineal foot.  
8x12 and 12x12, two flues, 52 to 56 brick per lineal foot.

Chimney breasts for fireplaces and mantels require 90 to 110 bricks per lineal foot the height of the chimney breast. Where the chimney is reduced in size above the breast, figure accord-

ing to the size and number of flues from there to the top as given above. These figures should enable one to arrive at a very close figure as regards the number of brick required. In the above figures no allowance has been made for any waste in brick and it would be proper to allow a small percentage for broken and wasted brick. If the brick are of good quality, 3 to 5 per cent. ought to cover all the waste in handling and laying.

#### LABOR COST OF LAYING BRICK.

The labor cost of laying brick varies according to the wall, the bond and the kind of mortar joint made. Common brick laid with common bond and plain cut joints: a bricklayer, with one tender, should lay 1,100 brick per 8-hour day, using cement mortar, and 1,350, using lime mortar.

For walls laid in common bond with struck joint one side and plain cut joint on the other side, figure 1,000 brick per 8-hour day, using cement mortar, and 1,200, using lime mortar.

For face walls laid up with selected common brick in common bond and struck joints, figure 950 brick per 8-hour day, using cement mortar, and 1,000 for lime mortar.

For face walls laid with selected common brick in common bond with v-shaped mortar joints, or with joints raked out, figure per 8-hour day, 900 brick, using cement mortar, and 950, using lime mortar.

Face walls laid up with press brick or face brick where there are panels and pilasters, figure 350 to 400 brick per 8-hour day.

For plain walls laid up with press or face brick, figure 700 to 800 brick per 8-hour day.

Figure laborer's time same as bricklayer's time where there is but one bricklayer working; if two bricklayers are working, figure  $\frac{1}{2}$  hour laborer's time to 1 hour of bricklayer's time.

—National Builder.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

## Contracts Awarded

Scope of Contract and Successful Bidders; "Inside" Information for the Material Man and Interior and Exterior Fitter.

**Auto Service Station**, Northeast Corner Market and Powelton avenue, \$2,500. Architect, private plans. Owners, Crew Levick Co., 111 North Broad street, Philadelphia. Iron on iron, 1 story, 14x28 feet, cement floor. Owner will build.

**Queen Lane Filter Plant Modification**, Queen Lane, Philadelphia. Contract No. 375. Architect, private plans. Owner, City of Philadelphia, Department of Public Works, Bureau of Water, City Hall, Philadelphia. Concrete work, brick work, iron work, steel and lumber. Owners have received bids.

**Residence (alts. and add.)**, 2309 North Park avenue, Philadelphia. Architect, Andrew J. Sauer & Co., Denckla Building, Philadelphia. Owner, Clarence L. Meyers, Drexel Building, Philadelphia. Architect taking bids due January 3rd at 10 A. M. Stewart Bros., 2526 North Orkney street; Frank K. Stahl, 2713 North Park avenue; Conneen Const. Co., 10 South Eighteenth street, and Lam Building Co., 1001 Wood street, are figuring.

**Work Shop**, Willard street, east of Emerald street, \$8,000. Architect, Herman H. Kline, 1612 South Fourth street, Philadelphia. Owner, John M. Kennedy, Jr., 1001 Chestnut street, Philadelphia. Brick, 2 stories, 44x69 feet, slag roof, cement floors, electric lighting. Owner will build.

**Residences (15)**, Duncannon street, Mervine and Eleventh streets, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, J. Henry Parker, care of architect. Brick and store, 2 and 3 stories, 16x44 feet, slate roof, tile roof, hardwood floors, stone foundations, hot water heating, electric lighting, tile and marble work, garages in basements. Plans in progress. Owner will be ready for sub-bids in one week.

**Porch Enclosure**, 1411 Erie avenue, Philadelphia. Architect, George S. Idell, 1705 Chestnut street, Philadelphia. Owner, Dr. M. F. Herman, on premises. Millwork, glazing, carpentry. Architect taking bid from Thos. C. Trafford, 1613 Sansom street.

### ESTIMATOR.

Young man with twelve years' experience taking off work and calling on the architects and builders of the city and State is desirous of securing a position with a material man. Address "Estimator," care of Builders' Guide.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

**Barn (alts. to Residence)**, Southeast Corner York road and Summerville avenue, \$10,000. Architect, private plans. Owner, A. C. Garrett, York road and Fisher's Lane. Brick, 2-story add. 20½x11 feet and 10½x6 feet, general interior and exterior renovation. Contract awarded to William J. Gruhler & Co., 219 High street, Germantown.

**Store and Storage Building (alts.)**, 810 Arch street, Philadelphia, \$6,000. Architect, private plans. Owner, Joseph H. Koplin, 829 Arch street, Philadelphia. General alterations. Contract awarded to Albert Lashner, 1811 South Sixth street, Philadelphia.

**Dwelling (alts.)**, 1415 Spruce street, Philadelphia, \$3,600. Architect, private plans. Owner, Girard Trust Co., Trustee, Stephen Girard Building, Philadelphia. Underpinning foundations. Contract awarded to Keystone State Const. Co., Franklin Bank Building.

**Stack**, Kensington avenue, South of "O" street, \$2,950. Architect, private plans. Owners, Rockland Hosiery Mills, Kensington and Allegheny avenues. Brick, 103 feet high. Contract awarded to American Chimney Corp., 218 South Twelfth street, Philadelphia.

**Bungalow**, West side Ridge avenue, South of City Line, \$1,700. Architect, Amos W. Barnes, 1507 Arch street, Philadelphia. Owner, Dr. B. R. Peltz, Roxborough, Philadelphia. Frame, 1 story, 16x26 feet, shingle roof, hot water heat, electric light, oak floors. Contract awarded to A. Bartholomew, Conshohocken, Pa.

**Warehouse (alts.)**, 150-52-54-56 North Front street, Philadelphia, \$4,900. Architect, private plans. Owner, Penna. Co., 517 Chestnut street, Philadelphia. New front, side walls, joists, girders, pine floors, stone work. Contract awarded to Frank E. Wallace, 1220 Chancellor street, Philadelphia.

**Residence and Store (alts.)**, 2553 South Seventh street, Philadelphia, \$2,300. Architect, private plans. Owner, N. Potamkin, 1125 South Sixty-first street, Philadelphia. Flush bulks. Contract awarded to B. Sheslack & Co., Fifty-second and Reed streets, Philadelphia.

**Store oLft (alts.)**, 1023 Market street, Philadelphia, \$10,000. Architect, private plans. Owner, Hare Est., Commercial Trust Building, Philadelphia. Elevator shaft. Contract awarded to H. E. Baton, 1713 Sansom street, Philadelphia.

**Residence (alts. and add.)**, Magnolia avenue and Church Lane. Architects, Savery & Scheetz, Stephen Girard Building, Philadel-

phia. Owner, Charles Peberdy, on premises. Brick and stone, 2½ stories, 15x34 feet, slate roof, parquetry and pine floors, tile and marble work, stone foundations, metal lath, iron work. Contract awarded to Charles S. Johnson, 712 East Cheltenham avenue, Philadelphia.

**Bank (alts.)**, 517 Chestnut street, Philadelphia, \$25,000. Architect, private plans. Owner, Penna. Co. for Insurance on Lives and Granting Annuities, 517 Chestnut street, Philadelphia. General alterations. Contract awarded to John Duncan, 920 Walnut street, Philadelphia.

**Store and Tenement**, Southeast Corner Parkside and Belmont avenues, \$20,000. Architect, I. W. Levin, 536 Ritner street, Philadelphia. Owner, Abe Koch, 525 Porter street, Philadelphia. Brick, 3 stories, 51x55 feet, slag roof, hot water heating, electric lighting, tile work. Contract awarded to Harry Hartmann, 2119 South Fourth street, Philadelphia.

**Building (alts.)**, 811-21 Cherry street, Philadelphia, \$5,100. Architect, Jesse T. Hoekstra, Presser Building, Philadelphia. Owner, Wm. Lipkin, on premises. Brick work, steel and iron work, carpentry, millwork, painting, glazing, tile work, metal lath, plastering (elevator, electric lighting and heating reserved). Contract awarded to John M. Yardley, 1716 Sansom street.

**Factory**, Bread and New streets, Philadelphia, \$275,000. Architect, private plans. Owners, H. O. Wilbur & Son, 235 North Third street, Philadelphia. Brick and concrete, 7 stories, 82x98 feet, slag roof, reinforced concrete, tile and wood floors, rolled steel sash and skylights, elevators, tin covered doors. Contract awarded to Turner Const. Co., 1713 Sansom street, Philadelphia.

**Power House (add.)**, Lena street, south of Armat street, \$25,000. Architect, private plans. Owners, Continental Mills Co., on premises. Brick and concrete. Contract awarded to Walter Dalton, 1215 Filbert street, Philadelphia.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

*Test* **SHEETROCK** *Before You Buy*  
WALL BOARD

Take samples of Sheetrock and other wall boards and test them.

Hold a match under Sheetrock for any length of time and it won't burn.

Ordinary wall boards make most buildings fire-traps. Ordinary wall boards ignite in from seven to eight seconds. This is why Sheetrock was preferred by the U. S. Government for its army cantonments.

Compare Sheetrock in thickness with ordinary wall boards—it is nearly twice as thick. Try

to break it. Scratch the pure gypsum rock center. Drive a nail thru it. Every test will prove the superiority of Sheetrock.

Made of the same material as the scratch coat of plaster, pure gypsum rock, Sheetrock is sandwiched between mineralized sheets of paper that take the place of the finishing coat of ordinary plaster.

Sheetrock is suitable for any room in any building. It presents a smooth, non-warping, even surface that will give permanent satisfaction and protection.

**Plans or No Plans**

There are two classes of builders who need the help of a strong, modern lumber centre,—those who have planned their operations well, and those who haven't.

If you have planned well, you will need a strong organization to help carry out your plans. The best is none too good. In big building operations, all of our experience and resources, including the powerful aid of our Traffic Department, are constantly required.

But if you have *not* been able to make careful plans; if you are forced to build hastily and under pressure, then only an uncommonly strong organization will enable you to accomplish your purpose. When you need unusual stocks or service that you have no right to expect, then the resources of the LLOYD organization will often save the day for you.

Some day you'll build. If you want the work finished on time, see that the lumber comes from LLOYD.

**WILLIAM M. LLOYD COMPANY**

Established 1868

29th and Ridge Avenue

PHILADELPHIA

folk, Va. Architect, private plans. Owners, United States Government, Bureau of Yards and Docks, Washington, D. C. Brick, steel and hollow tile, 4 stories, 233x126 feet, asbestos built-up roof, pine and concrete floors, metal lath, elevators, safety treads, roof ventilators, stone foundations, steam heating, electric lighting, rolled steel sash, rolling steel doors, kalamein doors, iron stairs, iron work. Owners taking bids due January 5th. John Gill & Sons, Inc., care of Bowden Const. Co., 430 Presser Building, Philadelphia, are figuring.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.

## INTERIOR WORK

### Save Money in Millwork

By WILLIAM ROBINSON SAFFORD.

Contractors who purchase millwork for jobs will find a wide variation in prices, as a usual thing, and often they are puzzled to know the reason. Most contractors think they can estimate millwork quite as accurately as the mill men themselves, and frequently they put in a bid for a job without going through the formality of taking mill figures. When they go out to get prices on millwork later, they are astonished to find that this work costs from 5 to 10 per cent. more than their estimate.

The fact is that millwork is a highly technical branch of the building business. Most contractors are fairly familiar with it, but few can sit down and make an accurate estimate of costs. It takes a mill man, one who is familiar with the latest lumber and labor costs, to intelligently estimate millwork, and no man can well do this unless he is right in the mill business.

Millwork varies in cost according to the size of lumber employed and the pattern of the machine work. Just the difference between the cut on one crown molding as compared with the cut on another may make a difference of a cent per foot. In a large order this would affect the total cost considerably.

In these days of high prices every item which contributes to boosting cost without benefit should be rigorously repudiated. One of the places to cut down the high cost of production is in millwork; this applies to window and door frames, exterior cornices and interior trim and doors.

Quantity production in a mill always reduces costs and that is why stock patterns of millwork are more economical than special patterns. Take window frames, for instance. Time was when nearly every architect and contractor had his own particular type of frames. Some contractors specified certain methods for putting together the pulley stiles and parting beads, and in those days most of the frames were complete "box" frames, with, of course, a certain waste of lumber.

The tendency now is to use as much as possible one type of frame—a frame in which the amount of lumber is reduced to the minimum, and in which the method of assembling is labor saving. Although

these frames cost less than former frames (on a basis of the new costs) they are not necessarily of any poorer quality. When well made of a good grade of lumber they are just as desirable as former more extravagantly designed frames. It means, simply, that the mill situation has reached a higher and more scientific period of development, in which efficiency counts most and waste is eliminated.

The standardizing of sizes and patterns of sash and frames has done much to reduce waste in millwork, for standard sash and frames mean, also, a more or less standardization in prices. Using practically the same pattern of frames in every job the contractor can tell somewhere near where he gets off in the frame situation. Using stock frames one house costing a certain price will cost about the same the next year, plus any advance caused by increase in material and wages.

In the manufacture of doors there is another opportunity to save money by standardizing patterns. A few years ago "stock" doors were used only on cheap work. Architects and builders, when building houses of a high grade, thought that the only way to get a good job was to design doors specially and have them made in the local mill. Door manufacturing has now come to be a highly specialized branch of millwork and builders have found that "stock" doors are superior to the local article made in local mills.

Designs of stock doors have been so improved in character that purchasers can now select from the catalogs of reliable manufacturers any style of door required. It is no longer necessary to design special doors for each architectural style as the door manufacturers have already done this. As a matter of fact "stock" doors are usually made better than the local mill can make them because door manufacturers, after years of experience with modern door machinery, can turn out a better product than the ordinary mill, at at less cost. Door making is almost automatic in a large mill specializing on this product, and the labor cost is reduced to the lowest possible point. For this reason "stock" doors can be made in competition with special doors and contractors

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

will usually find them lower in cost and better in quality than the latter.

The same thing applies to interior trim. In the catalogs of reliable and responsible concerns will be found patterns of trim to fit any style of architecture. Architects who formerly insisted upon designing every foot of interior trim now frequently select ready-made trim and receive in return excellent material molded along correct lines and delivered more quickly than local mills can turn it out, and at less cost.

One of the ways to reduce the cost of building is to eliminate elaborate interior moldings and substitute patterns that are simple and which can be built up of small pieces, reducing lumber and labor to the minimum.

Veneer of specially selected wood is used and every effort made to secure effects of grain that will enhance the appearance of doors as much as possible. Inlays of bands of wood of different color can be furnished and are very decorative.

Stock patterns of outside doors, especially effective on bungalows, come in varying thicknesses and are usually of soft wood for painting, though some dealers carry them in hardwoods, for varnishing.

In addition to stock designs for china cupboards and buffets representative manufacturers carry a complete line of pantry cases which will be found, in convenience, the equal of any designed especially for the purpose by kitchen experts. The majority of these have drawers or paneled doors below, and glass doors above, and the shelves are frequently adjustable.

Mantels for fireplaces are also kept in stock by many mills and there is a wide variation of designs covering any architectural period. The tendency is toward simple mantels, in which there is an ordinary mantel shelf above, and frequently a few plain panels against the wall.

To keep pace with the high cost of building, experts are studying methods of reducing costs by greater efficiency in labor and in the use of material. The big mills of the country, fresh from their war-time experience, when they were called upon to deliver enormous quantities of material in the quickest possible time, are geared for the best of service to civilian consumers. They have developed "stock" designs of frames, sash, doors and trim to the point where beauty is not sacrificed. Many of them have exterior cornice moldings, shutters and blinds, and porch posts and railings standing in their warehouse ready to

ship, goods of the highest class and of good architectural types, and usually at prices lower than local mills can quote.

This a genuine economy which is truly tending toward the lowering of building costs, and is therefore very welcome to builders and architects.

—*National Builder.*

#### THE YEAR'S BUILDING RECORD

In the entire country the 1919 building projects will reach \$2,600,000,000, says a New York authority. This includes engineering operations and construction of all forms. It is nearly a billion dollars above the 1918 total, which held the high record. Current projects are one-third residential, one-third industrial 15 per cent. for general business and 10 per cent. for public works and utilities.

Builders in New York City district are rounding out a \$550,000,000 year, more than one-third of the building being residential. While Manhattan's man activity has been in business projects, Brooklyn and Sueens are bustling with home building, and suburban operators have put up small houses by the hundreds and vastly improved transportation facilities.

Capital for building seems to be most available in the Central West, where operations are running far past all previous volumes. Reports from Illinois, Indiana, Iowa, Wisconsin, Michigan, Missouri and Kansas show outlays of \$820,506,000 for eleven months of the year. All parts of the country score good gains over their old high records. New England, in its rush to get abreast of the demand for homes, has called for outlays of \$207,288,000 during the year, and the Middle Eastern section has a record of nearly double the best volume of any preceding year.

Peace in the New York industrial field is tentatively assured for 1920 by the agreement now pending between the Building Trades Employers' Association and the Building Trades Council, the latter representing 41 unions in New York City and Long Island, and 150,000 employes. Negotiations have been in progress for a year and the agreement is considered by far the most important step ever taken toward amicable working ar-

rangements between employers and employees. Strikes are made improbable during 1920 by this agreement, and a clause is provided for the continuation of the plan into 1921.

The purpose of the measure is "to obtain continuity of employment and uninterrupted production" and it provides for a permanent Board of Arbitration. It would seem to herald a new industrial day.

### CONSTRUCTION AND EMPLOYMENT IN NEW YORK STATE

To authorize and require the State Industrial Commission, through the Bureau of Employment, to obtain during the first three months of each year from the several State departments and localities current information regarding all public works projected and under construction, and to publish this information annually in April in summary form is one of the recommendations recently submitted to the Governor of New York State by the State Reconstruction Commission, says the Bureau of Labor Statistics in its last monthly bulletin. In its report the Commission dealt generally with the problem of employment in the State and felt that one of its most practical duties would be to emphasize the desirability of planning public improvements upon a long-term basis and prompt action in pushing forward the work outlined, with special vigor whenever industrial depression threatens.

It is also recommended that the industrial commissioner, through the Bureau of Employment, develop a program with a view to the organization of the labor market to bring about extensive dovetailing of winter and summer trades and to stimulate the use of subsidiary trades; also with a view to concentrating attention upon the need of industrial training, and in the case of seasonal employment or depression, urging employers to shorten hours rather than discharge employees.

It looks toward the development of the State employment service into an ultimate monopoly and the convening in April or May of an annual conference of all public works authorities throughout the State to discuss engineering, financial, employment and other common problems.

### NOVEMBER BUILDING OPERATIONS

Gain of 717 per cent. over 1918 operations was the record in Chicago of November building permits, as given in the last number of the *American Contractor*,

the report being for 193 cities. The value of these permits for the month was almost 150 million dollars, a decrease of about six million from October. In 63 cities the permits were less than for the preceding month, there being no special area of gains and losses. In general, the fluctuation is less in the most important cities, which is a hopeful sign for further continuance of activity.

In no year has November failed to show a slump in activity. It and December are months in which no activity is planned for the existing year, and little projection made for the coming year's activity.

In the face of a nation-wide coal strike following the steel strike and other hampering influences, "the construction industry has kept its grip mighty well," says the *Contractor*, "and gives promise of continued activity."

### BUILDING CONDITIONS IN ITALY

Among other proposals to stimulate building in Italy, it has been suggested, says the Trade Commissioner at Rome, that under certain conditions new buildings should be exempted from taxation for a period of 15 years for dwellings for the better class, and 20 years in the case of tenements. Previous to 1914, building companies and individuals in Rome constructed from 10,000 to 14,000 rooms per year, which, however, was barely sufficient to take care of the normal development of the city. During the war, of course, private building operations practically ceased, and since the armistice little has been done. The great building institutions have suspended new construction for the reason that the increased cost of materials and the higher wages which must be paid to workmen do not permit their stockholders to derive a reasonable profit. Private builders, according to the Trade Commissioner, are in the same position and are doing nothing. In all the principal Italian centers of population the shortage of housing accommodations is acute and strenuous efforts are being made to stimulate action in order that relief may be afforded.

### SAVING TIMBER ON BUILDING SITES

Boston, Mass., December—A model village near Worcester, Mass., for the benefit of the employees of a large factory in Worcester, will be ready for occupancy June 1, 1920, a prominent contractor of Springfield having just been awarded a contract to build 100 houses, costing ap-

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.  
**DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.**

proximately \$500,000. There will also be a community house, two boarding houses and a community store. The lumber to be used in the construction will be shipped to Worcester in logs and will be cut into the proper dimensions on the site of the building, auto trucks hauling the logs from the railroad to the new village.

## BANKING AND BUILDING OF TODAY AND YESTERDAY

By H. T. UNDERWOOD

I was talking to a banker in a comparatively small town in Alabama the other day. He had just signed a contract with me to construct and equip a new building for his bank, and I confess I was a bit astonished at his knowledge of what constituted the "last word" in bank equipment and appliances. He was getting along in years, in fact just about at that age when most men are referring to "the good old days." And, as I said before, it was a rather small town. Yet, here was a banker who not only wanted the best for his community, but knew what the best was.

Mr. Banker told me frankly that he wanted his building to rank with the best in the land from an architectural standpoint—so that every person in the town could be proud of the structure, and so that it might set an example for other building owners to follow. As to equipment, mechanical appliances and conveniences, he insisted that he wanted his customers to feel that they were being taken care of in a modern, up-to-date manner.

"It is awfully easy," he said, "for us to go along and think our past reputation will hold us up; but times change, new generations come into power and the old fogey who does not keep up with the procession is soon out of the running. A new building with the latest improvements will cause every one in this section of the country to know that we are progressive, safe and sane."

Really, I wanted to applaud these words of wisdom, but when I complimented him on his wide-awake attitude, he said:

"Oh, pshaw! If I didn't keep my ears to the ground I'd have been out of business long ago. There are too many people fighting the new ideas as it is. Some of us have got to fight for them. Why, you remember it has only been a few years when all of the coins handled during the day had to be counted and sorted by hand every night. Then along came a man with a machine that did the work. All you had to do was dump the change in a hopper and out it came all separated,

wrapped and labelled. Don't you recall how the bank clerks objected to the machine? Said it would take their work away from them—

"Then there is that machine that makes change for the teller quicker than he ever could count it. Look at the automatic writing machine where a teller can write a message in his cage which is duplicated on a sheet of paper in the bookkeeper's room! Look at the machine which cancels checks. Why, if they had to cancel checks by hand in the big city banks, they would have to have ten times the number of clerks and twice the floor space."

"Yes," I interrupted. "And how about the mailing department with its automatic letter openers, and the folding, sealing and stamping machines? And the dictaphone to speed up stenographic work and save a busy man's time, and the mimeograph letter writers that turn out imitation typewritten letters by the hundreds?"

"Sure," he said. "But those are more for the big banks in the big cities. For us fellows out in the country one of the greatest helps has been the adding machines that can't make mistakes, the monthly statement writing machines and the ledger posting that keep bookkeepers from growing gray before their time."

The development of machinery in the banking business has been remarkable, and the efficiency, time and labor saving brought about by the adoption of mechanical methods can never be computed.

But these devices have not surpassed another phase of banking development. I refer to the features of planning, building and equipment generally. It is only in the last dozen years that banks, particularly those in small towns, have been planned and built with any degree of efficiency. Yet, no kind of building work calls for greater skill. It did seem to be a fairly simple matter: A certain number of cages for the tellers, space for the officers, a room some place for the bookkeepers and the other employees; perhaps a safe deposit room. A bank used to be a hard place to get into; there was no note of welcome; nothing of cheerfulness, nothing of comfort or convenience, and little or no attempt at scientific arrangement.

Nwadays, it is recognized that a bank's primary function is to render a service, particularly a service to its customers. To render that service in the best possible manner, it is necessary that the banking room be laid out scientifically. The problems of the bank building, while seem-

ingly simple, are indeed intricate, and the proper arrangement of space, logical placing of departments and apportioning of space, call for an order of architectural and constructive intelligence that can come only from specialization in bank building work.

There are architects who have given this type of building much study and they may be depended upon to design a structure that is not only ornamental, but practical in every way.—*Architect and Engineer.*

### ENGLAND TO BUILD 250,000 HOMES

Plans providing for 250,000 houses with government financial assistance have been made in Great Britain in an attempt to meet the housing needs of the nation, according to a report by Mr. Albert Farwell Bemis, a member of the commission sent by the National Civic Federation to England, France and Italy to study industrial conditions.

"In France," said Mr. Bemis in his report, "the houses destroyed and damaged beyond ordinary repairs within the devastated area may be taken as the measure of the present shortage. This would approximate 410,000 homes. In Great Britain 450,000 would probably represent the actual need.

"Strange as it may seem, the conditions of the war have inspired among all classes of people a greater interest in humanity, and a greater regard for the physical and social conditions under which the masses of the population live. During the war the people of Great Britain and France became accustomed to the handling of large national problems by direct governmental action.

"The government has appointed a new official in connection with housing known as the Director of Propaganda. It will be his duty to arouse and maintain general interest in housing matters, and it is proposed that he work through a subordinate attached to each of the thirteen regional commissioners.

"Financial assistance to local authorities is to be calculated on a basis estimated to relieve these of the burden of any annual deficit in expenses of operation to the extent of the excess in the local tax 'rates' of a penny on the pound, assessable against the area in question. There is to be no donation by government toward the cost where the annual excess of expenditure over income would not exceed that amount. It is estimated

that the capital expenditure by government during the three years of its proposed assistance would amount to £300,000,000 for England and Wales, based upon an average capital cost per house of £600, and the net deficit to be met out of public funds on account of subsidies to Public Utilities Societies and contributions towards the cost of operation in the case of developments by the local authorities would amount to £6,500,000. Similar figures for Scotland would be £39,000,000 capital expenditure and £845,000 net deficit.

"With a view to meeting the demands of demobilized soldiers who want to acquire small agricultural properties, the government has introduced into Parliament two measures known as the 'Acquisition Land bill' for improving and clarifying laws governing the condemnation and acquisition of land for public purposes, and the 'Land Settlement bill.' The settlement bill not only contemplates the sale of land, but the operation of colonies under the supervision of the Department of Agriculture and Fisheries for the training of agriculturists and the forming of co-operative organizations for the distribution and sale of farm products.

"Mr. Nevin, in his report on labor conditions, said that opinion in England in its attitude toward the labor problem was more active, responsive and alert than in the United States, but that the methods adopted by the public were less complicated and effective than similar agencies in the United States.

"The old idea of limitation of production by British workmen is being abandoned, and there is being substituted a better and quickened understanding of the necessity of enlarged productivity. Trade unions clearly recognize and openly advocate the economic effect of increased production, and there is no evidence of insistence upon the reinstatement of pre-war restrictions of output.

"Most impressive during the travels of our commission through Great Britain was the attitude of broad-minded representatives of trade unionism in seeking to establish cordial plans of co-operative action between employers and employees.

"Labor as a whole is more trustful of British employers than the government of the politicians. In considering Great Britain's industrial situation the American reader should remember that the government officially recognizes the legality of trade unionism, and there is practically no issue between employer and employee with respect to the enforcement of the principle of the closed shop."—*Architect and Engineer.*

### THE FIRST PAN-AMERICAN CONGRESS OF ARCHITECTS

The Organizing Committee has announced that the first Pan-American Congress of Architects will meet March 1, 1920, at Montevideo. The architects of all the Americas are invited to attend and to exhibit their work, and the presence of the presidents and faculties of all schools of architecture is especially desired. The chief purposes of long planned convention are the demonstration of American architectural advancement, the discussion of artistic and technical development, and the increase of professional solidarity. Both practicing and student architects are eligible as exhibitors, and prizes will be awarded to architects, schools or faculties, and individual students in accordance with the decisions rendered by a chosen international jury composed of professors of architecture.

The work of architects for exhibition are comprised in the following classification:

First—Projects of public buildings and monuments.

Second—Projects of private buildings and monuments.

Third—Projects of decoration.

Fourth—Details and motives of architecture.

Fifth—Works upon the History of Architecture in America.

The projects mentioned in the first two classifications must be presented with their plans, frontage and sections. They may or may not correspond to buildings already finished. When dealing with completed buildings, the exhibitor may present photographs of frontages or interiors to complete his idea. Details and perspectives will be admitted.

The projects of decoration mentioned in the third category must be composed of all the parts necessary for their clear understanding. Details and motives of architecture referred to in the fourth category may be presented in the form considered best and photographs will be accepted in order to complete subjects. Studies upon the History of Architecture may be presented in accordance with the best judgment of the exhibitor.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

People who want to buy things do not catch the seller, chloroform him and cram the orders into his pocket.

Advertising is the proper education of the public as to where the thing can be found, and therefore it is a necessity.

We are parts and particles of each other, but a little of the kindly glue of human brotherhood is needed to fasten us together. The policeman who keeps the crossing clear, and at the same time informs us as to the location of the post office and the First National Bank, no doubt is, in one sense, an economic waste. On the other hand, he is an economic necessity. He is a necessary middleman.

He relieves the congestion of traffic and granting the hypothesis that he does not misdirect us as to the location of the post office, he speeds us on our way.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

## The Page "Ad"

"I like the clean, outstanding appeal of the page ad," said an advertiser recently, "but I'll be frank to say that I've never been able to convince myself that it can be made to pay."

"Have you ever tried out a whole page?" he was asked.

No. He hadn't. But he knew what a page of space would cost, and he couldn't get away from a certain overhang of doubt that the additional results would prove commensurate with the extra outlay.

We mentioned Wanamaker, who uses a page a day regularly, varying this program now and then by making it two pages.

Oh, yes, of course. But then Wanamaker's case was quite different.

We asked him to point out "how" and "why."

The truth of the matter is that the page ad is just as much more effective than the small ad as the big show window is more effective than the small show window.

To be sure, in the case both of the ad and the window a whole lot necessarily depends on just what you put into them and how you dress it up.

It wouldn't be good business to buy a page of space in order to work off a string of poor sales-talk.

But, assuming that the sales-talk is "right" and the article it is designed to sell an article that has real merit and utility, the page ad is actually the short cut to results.

The first object of any ad is to get the attention of the reader.

Nothing does this more effectually than the page announcement.

We have in mind an advertiser who slips a page space into his regular schedule now and then just as an interest-reviver.

He tells us it pays big.

Whether it would pay as handsomely in your case, we are not in a position to say.

Why not try it out?

The cost is not excessive.

Call Mr. L. S. DeLone.

Philadelphia, Pa.

Prompt Deliveries from our Philadelphia Warehouse

# BUILDERS' SUPPLIES

To be assured of prompt deliveries of the best grades of

**Cement, Lime, Sand, Gravel, Plaster, Concrete Stone and Pebbles**

Place your orders with us. We have for years satisfied our customers. **WHY NOT YOU?**

**P. H. FAIRLAMB CO.**

115 to 121 S. 30th Street  
Philadelphia

One of the many "reasons why" so many homes in and near Philadelphia are being equipped with the

## Direct Action Gas Range

is that its patented oven heat regulator eliminates all guess work in cooking and enables one to obtain the same results at all times. It SAVES GAS, TIME, FOOD and WORRY!

We have it connected up with gas on our sample floor and shall be glad to have you and your clients call any time to witness a demonstration. An attractive booklet showing the entire line is yours for the asking.

**BORDEN STOVE CO., 1311-1313 Arch St., Phila.**

The Touraine Apts, 1520 Spruce street; the Daniel E. Hogan Operations at 54th and Wynnefield avenue, and 60th and Columbia avenue; the William Pilton Operation at 5959 Larchwood avenue; and the Presser Operation at Yeadon, Pa. are a few of the many operations which are enjoying the advantages of the DIRECT ACTION GAS RANGE.
